<b>1 Stable distributions</b>	1
1.1 One-dimensional stable distributions	1
1.2 Characteristic exponent of a one-dimensional stable law	4
1.3 Moments	9
1.4 Normalised one-dimensional stable distributions	11
1.5 Distributional identities	13
1.6 Stable distributions in higher dimensions	20
1.7 Comments	25
<b>2 Lévy processes</b>	27
2.1 Lévy–Itô decomposition	27
2.2 Killing	30
2.3 Path variation and asymmetry	31
2.4 Feller and strong Markov property	34
2.5 Infinitesimal generator	35
2.6 Drifting and oscillating	35
2.7 Moments	36
2.8 Exponential change of measure	37
2.9 Donsker-type convergence	39
2.10 Transience and recurrence	39
2.11 Duality	41
2.12 Hitting points	42
2.13 Regularity of the half-line	44
2.14 Excursions and the Wiener–Hopf factorisation	44
2.15 Reflection	48

2.16	Creeping	49
2.17	First passage problems	49
2.18	Lévy processes in higher dimensions	54
2.19	Comments	56
<b>3</b>	<b>Stable processes</b>	58
3.1	One-dimensional stable processes	58
3.2	Normalised one-dimensional stable processes	60
3.3	Path variation, asymmetry and moments	62
3.4	Path properties in one dimension	64
3.5	Wiener–Hopf factorisation and the first passage problem	66
3.6	Isotropic $d$ -dimensional stable processes	70
3.7	Resolvent density	72
3.8	Comments	76
<b>4</b>	<b>Hypergeometric Lévy processes</b>	78
4.1	$\beta$ -subordinators	78
4.2	Hypergeometric processes	81
4.3	The subclass of Lamperti-stable processes	87
4.4	The first passage problem	89
4.5	Exponential functionals	93
4.6	Distributional densities of exponential functionals	103
4.7	Distributional tails of exponential functionals	111
4.8	Comments	113
<b>5</b>	<b>Positive self-similar Markov processes</b>	115
5.1	The Lamperti transform	115
5.2	Starting at the origin	117
5.3	Stable processes killed on entering $(-\infty, 0)$	122
5.4	Stable processes conditioned to stay positive	128
5.5	Stable processes conditioned to limit to 0 from above	133
5.6	Censored stable processes	136
5.7	The radial part of an isotropic stable process	144
5.8	Comments	151
<b>6</b>	<b>Spatial fluctuations in one dimension</b>	153
6.1	First exit from an interval	153
6.2	Hitting points in an interval	160
6.3	First entrance into a bounded interval	161
6.4	Point of closest and furthest reach	166
6.5	First hitting of a two-point set	168
6.6	First hitting of a point	172
6.7	First exit for the reflected process	176
6.8	Comments	181

	Contents	ix
<b>7 Doney–Kuznetsov factorisation and the maximum</b>	183	
7.1 Kuznetsov’s factorisation	183	
7.2 Quasi-periodicity	185	
7.3 The Law of the maximum at a finite time	190	
7.4 Doney’s factorisation	196	
7.5 Comments	204	
<b>8 Asymptotic behaviour for stable processes</b>	206	
8.1 Stable subordinators	206	
8.2 Upper envelopes for $\rho \in (0, 1)$	214	
8.3 Lower envelopes for $\rho \in (0, 1)$	219	
8.4 Comments	226	
<b>9 Envelopes of positive self-similar Markov processes</b>	227	
9.1 Path decompositions for pssMp	227	
9.2 Lower envelopes	234	
9.3 Upper envelopes	240	
9.4 Comments	250	
<b>10 Asymptotic behaviour for path transformations</b>	252	
10.1 More on hypergeometric Lévy processes	252	
10.2 Distributions of pssMp path functionals	260	
10.3 Stable processes conditioned to stay positive	265	
10.4 Stable processes conditioned to limit to 0 from above	272	
10.5 Censored stable processes	275	
10.6 Isotropic stable processes	279	
10.7 Comments	285	
<b>11 Markov additive and self-similar Markov processes</b>	286	
11.1 MAPs and the Lamperti–Kiu transform	286	
11.2 Distributional and path properties of MAPs	288	
11.3 Excursion theory for MAPs	292	
11.4 Matrix Wiener–Hopf factorisation	295	
11.5 Self-similar Markov processes in $\mathbb{R}^d$	300	
11.6 Starting at the origin	303	
11.7 Comments	304	
<b>12 Stable processes as self-similar Markov processes</b>	306	
12.1 Stable processes and their $h$ -transforms as ssMp	306	
12.2 Stable processes conditioned to avoid or hit 0	314	
12.3 One-dimensional Riesz–Bogdan–Żak transform	316	
12.4 First entrance into a bounded interval revisited	318	
12.5 First hitting of a point revisited	322

x

*Contents*

12.6	Riesz–Bogdan–Żak transformation in dimension $d \geq 2$	324
12.7	Radial asymptotics for $d \geq 2$	328
12.8	Comments	329
<b>13</b>	<b>Radial reflection and the deep factorisation</b>	330
13.1	Radially reflected stable processes when $\alpha \in (0, 1)$	330
13.2	Deep inverse factorisation of the stable process	332
13.3	Ladder MAP matrix potentials	335
13.4	Stationary limit of the radially reflected process	344
13.5	Deep factorisation of the stable process	348
13.6	Comments	349
<b>14</b>	<b>Spatial fluctuations and the unit sphere</b>	351
14.1	Sphere inversions	351
14.2	Sphere inversions with reflection	354
14.3	First hitting of a sphere	355
14.4	First entrance and exit of a ball	365
14.5	Walk-on-spheres and first exit of general domains	374
14.6	Comments	381
<b>15</b>	<b>Applications of radial excursion theory</b>	383
15.1	Radial excursions	383
15.2	The Point of closest reach to the origin	389
15.3	Deep factorisation in $d$ -dimensions	403
15.4	Radial reflection	406
15.5	Comments	411
<b>16</b>	<b>Windings and up-crossings of stable processes</b>	412
16.1	Polar decomposition of planar stable processes	412
16.2	Windings at infinity	414
16.3	Windings at the origin	417
16.4	Upcrossings of one-dimensional stable processes	421
16.5	Comments	428
<b>Appendix</b>		429
A.1	Useful results from complex analysis	429
A.2	Mellin and Laplace–Fourier inversion	430
A.3	Gamma and beta functions	431
A.4	Double gamma function	432
A.5	Double sine function	434
A.6	Hypergeometric functions	435
A.7	Additive and subadditive functions	436
A.8	Random difference equations	437
