Index

allocation rule, 53
anonymity, 50
ascending clock auction, 216
ascending proxy auction, 165
asking price, 104
atomic bid, 161
auction, 65
augmented Lagrangian method, 240
baseband processing unit pool, 22
Bayesian–Nash equilibrium, 57, 85, 86
Bayesian–Nash incentive compatibility, 58
best response, 74, 78, 86, 223
bid-rigging, 51
bid shading, 103
bidding language, 161
bidding ring, 51
bidding strategy, 75, 84, 86, 89, 103
black hole attack, 87, 114
blockchain network, 244
budget balance, 59, 192, 203, 208, 213

cache hit rate, 41
caching placement, 41
client-assisted cloud, 227
clock-proxy auction, 167
cloud, 14
cloud-based video-on-demand system, 24
cloud computing, 18
cloud data center networking, 18
cloud networking, 18
cloud tenant, 20
cognitive radio, 30, 79, 153
combinatorial auction, 161, 170
common value auction, 66
complementary item, 159
computational efficiency, 203, 213
conclusion, 51
confidentiality, 49
conflict graph, 207
continuous double auction, 194
cross-tier interference, 38
critical payment, 173, 174
critical value, 62, 174, 180
c cutoff value, 235
D2D communication, 31
data accuracy, 34
data aggregation, 34, 105
depth learning, 238
discriminatory pricing, 193
dominant strategy, 57
dominant-strategy incentive compatibility, 58
double auction, 189
Dutch auction, 67, 83
eavesdropper, 44, 130
economic efficiency, 56, 59, 192
edge computing, 18, 209
English auction, 67, 72
English–Dutch auction, 97
equilibrium, 55
equilibrium strategy, 84, 86, 90, 102
ex-post equilibrium, 78
fairness, 29, 56
false-name bids, 51
false-name-proof, 51
fault tolerant, 35
first-price sealed-bid auction, 54, 67, 100
first-price sealed-bid reverse auction, 104
fog computing, 244
forward auction, 66, 104
friendly jammer, 44
hammer price, 72
HetNet, 27
incentive compatibility, 56, 141, 237
incentive compatibility violation, 240
incentive cost, 35
individual rationality, 56, 58, 156, 192, 203, 208, 210, 213, 227, 237
individual rationality violation, 239
information privacy, 50
Internet of Things (IoT), 11, 14
intrusion detection system, 88
iterative combinatorial auction, 165
jammer, 44
k-anonymity location privacy, 50
load balancing, 37
loss function, 238
M2M communication, 33
malicious node, 87
malicious user, 44
MANET, 88
massive MIMO, 146, 147
McAfee's mechanism, 193
mechanism, 53
mechanism design, 53
Meyerson auction, 250
mmWave, 29
mobile cloud networking, 18
mobile crowdsensing network, 15, 16
mobile device cloud, 142
monotone transform function, 250, 251
Monotonicity, 174, 229
Nash equilibrium, 57, 121, 122, 223
Network lifetime, 35
Network throughput, 37
online auction, 215, 224
open-cry auction, 67
opportunity cost, 232
optimal auction, 237
OR bid, 161
outage probability, 28
outstanding ask, 194
outstanding bid, 194
participatory sensing, 16, 106, 197
pay-as-bid, 193
pay-what-you-bid, 100
payment rule, 53
payoff, 85, 90, 102, 121
physical layer security, 131, 218
privacy preserving, 50
private value, 232
private value auction, 66
remote radio head, 22
revenue equivalence, 85
reverse auction, 66, 104
risk appetite, 89
RSSI, 29
sealed-bid auction, 67
second-price sealed-bid auction, 54, 120
second-price sealed-bid reverse auction, 124
secrecy capacity, 130
secrecy rate, 217
selfish user, 44
sensing data, 14
sensing information, 14
share auction, 215, 221
signal, 74
single-round double auction, 189
social choice function, 58
social surplus, 60
social welfare, 59, 60, 141
Spectrum efficiency, 28
substitutable item, 159
supervised learning, 239
supply and demand model, 190
symmetric equilibrium strategy, 77
symmetric model, 75
time value, 234
transformed bid, 250
truthful bidding, 122, 141
truthfulness, 56, 156, 204, 208, 213, 227, 229
uniform pricing, 192
user association, 37
utility, 57, 198, 202, 211, 219, 237
Vickrey–Clarke–Groves (VCG) auction, 135
virtual bids, 153, 155
virtual value, 153, 154
wait-line auction, 215, 232
Walrasian equilibrium, 79, 81
weighted independent set problem, 155
winner's curse, 103
wireless caching, 40
wireless sensor network, 15
XOR bid, 162
