## Contents

<i>List of Illustrations</i>	<i>page</i> ix
<i>List of Tables</i>	xv
<i>Notes on Contributors</i>	xviii
<b>Introduction</b>	<b>1</b>
<b>Part One Theory</b>	<b>9</b>
<b>1 Industrial Structure and the Macroeconomy: A Few Premises for a Macromodel</b>	<b>11</b>
1.1 Introduction	11
1.2 Why a New Theoretical Approach	12
1.2.1 Microfoundation	14
1.2.2 Market Structure	19
1.2.3 Expectations and Implications for the Simulations	23
<b>2 Industrial Structure and the Macroeconomy: The Macroeconomic Model and Its Algebraic Framework</b>	<b>26</b>
2.1 Introduction	26
2.2 The Algebraic Derivation of the Aggregate Demand	28
2.3 The Firms	39
2.4 The Incentive Compatible Wage, the Probability of Entry and Exit and the Employment Level	48
2.5 A Digression on the Link Between the Labor Market Equilibrium, the Firm's Output and the Entry Decision	55
2.6 Interpreting the Nature of the Equilibrium in the Oligopolistic Market	63
2.7 A Few Equations Summarizing the Model for the Agent-Based Simulations	67
2.8 Concluding Remarks	68
2.9 Technical Specifications – Entry and Output Determination: The Existence of a Cournot-Nash Equilibrium	70

<b>Part Two</b>	<b>Model</b>	<b>75</b>
<b>3</b>	<b>A Computable Market Model: The Structure of the Agent-Based Simulation</b>	<b>77</b>
3.1	A Scheme to Start	77
3.1.1	SLAPP – Swarm-Like Agent Protocol in Python	78
3.1.2	The Structure of the Simulation Model	79
3.1.3	What Is a Cycle and What Are Sub-Steps?	84
3.1.4	Item 1: Reset Action	84
3.2	Item 2: <i>makeProductionPlan</i> or <i>adaptProductionPlan</i>	84
3.2.1	<i>makeProductionPlan</i>	84
3.2.2	<i>adaptProductionPlan</i>	85
3.3	Item 3: <i>hireFireWithProduction</i>	87
3.4	Item 4: <i>produce</i>	87
3.4.1	Item 4, Continuation: <i>workTroubles</i>	88
3.5	Item 5: <i>planConsumptionInValue</i>	88
3.6	Item 6: <i>setInitialPricesHM</i>	89
3.7	Item 7: <i>actOnMarketPlace</i>	92
3.8	Item 8: <i>setMarketPrice</i>	96
3.9	Item 9: <i>evaluateProfit</i>	97
3.10	Item 10: <i>nextSellPriceJumpFHM</i> and <i>nextSellPricesQHM</i>	98
3.10.1	Item 10–full: <i>nextSellPriceJumpFHM</i>	98
3.10.2	Item 10–quasi: <i>nextSellPricesQHM</i>	99
3.11	Item 11: <i>toEntrepreneur</i> and <i>toWorker</i>	102
3.11.1	Item 11: <i>toEntrepreneur</i>	102
3.11.2	Item 11: <i>toWorker</i>	102
3.12	Item 12: <i>On wages: fullEmploymentEffect</i> and <i>incumbentAction</i>	103
3.12.1	Item 12: <i>fullEmploymentEffectOnWages</i>	103
3.12.2	Item 12: <i>incumbentActionOnWages</i>	103
<b>4</b>	<b>The Results of the Simulation Agent-Based Model, in SMAC and ASHAM Modes</b>	<b>106</b>
4.1	Initial Results, Cases 0a (g in Figure 4.17) and 0b (h in Figure 4.17)	106
4.2	Synopsis of SMAC Experiments, from Atomistic to Oligopolistic Markets	112

<i>Contents</i>		vii
4.2.1	Case 1 ( <i>a</i> in Figure 4.17): 100 Entrepreneurs and 100,000 Workers	112
4.2.2	Case 2 ( <i>b</i> in Figure 4.17): 1,000 Entrepreneurs and 100,000 Workers	115
4.2.3	Case 3 ( <i>c</i> in Figure 4.17): 10 Entrepreneurs and 100,000 Workers	117
4.2.4	Case 4 ( <i>d</i> in Figure 4.17): 20 Entrepreneurs and 100,000 workers	120
4.2.5	Case 5 ( <i>e</i> in Figure 4.17): 50 Entrepreneurs and 100,000 Workers	123
4.2.6	Case 6 ( <i>f</i> in Figure 4.17): 50 entrepreneurs and 10,000 workers	125
4.2.7	Summarizing Countercyclical Markup Presence in Cases 0a to 6	127
4.2.8	Synopsis of Cases from 0a to 6, in the SMAC Economy	127
4.3	A Qualitative Analysis of ASHAM Experiments	136
4.4	<i>Full</i> ASHAM	138
4.4.1	Case 7: 10 Entrepreneurs and 10,000 Workers, in a <i>Stable</i> Economy, with an <i>Increasing Number of Firms</i>	138
4.4.2	Case 8: 10 Entrepreneurs and 10,000 Workers, in a <i>Stable</i> Economy, with <i>Firm</i> <i>Dynamic</i>	144
4.5	<i>Quasi</i> ASHAM, with the <i>Unsold</i> Option	147
4.5.1	Case 9: 10 Entrepreneurs and 10,000 Workers, in a <i>Nearly Stable</i> Economy, with a <i>Final Tight Oligopolistic Structure</i>	147
4.6	<i>Quasi</i> ASHAM, with the <i>randomUp</i> Option	153
4.6.1	Case 10: 10 Entrepreneurs and 10,000 Workers, in a <i>Stable</i> Economy, with <i>Information Shocks</i> and a <i>Stable</i> <i>Oligopolistic Structure</i>	154
4.7	<i>Quasi</i> ASHAM, with the <i>Profit</i> Option	158
4.7.1	Case 11: 10 Entrepreneurs and 10,000 Workers, in a <i>Stable</i> Economy, with a <i>Stable Oligopolistic Market</i>	159
4.8	Synopsis of Cases from 7 to 11, in the ASHAM Economy	163

## *Illustrations*

3.1	The outline of the simulation model with its 12 items	<i>page</i> 80
3.2	Case i: buyers' price curve with 10,000 agents, $\varepsilon_B$ in $[-0.09, 0.01]$ ; sellers' price curve with 10 agents, $\varepsilon_S$ in $[-0.01, 0.09]$	82
3.3	Case ii: buyers' price curve with 10,000 agents, $\varepsilon_B$ in $[-0.11, -0.01]$ ; sellers' price curve with 10 agents, $\varepsilon_S$ in $[0.01, 0.11]$	82
3.4	Case iii: (a) buyers' price curve with 10,000 agents, $\varepsilon_B$ in $[-0.05, 0.05]$ ; sellers' price curve with 10 agents, $\varepsilon_S$ in $[-0.05, 0.05]$	83
3.5	Case iii: (b) buyers' price curve with 10,000 agents, $\varepsilon_B$ in $[-0.10, 0.10]$ ; sellers' price curve with 10 agents, $\varepsilon_S$ in $[-0.10, 0.10]$	83
4.1	Case <i>0a</i> from the 2017 paper, macro-variable series with new entrant firms	108
4.2	Case <i>0a</i> from the 2017 paper, agent series with new entrant firms	108
4.3	Case <i>0b</i> from the 2017 paper, macro-variable series without new entrant firms	109
4.4	Case <i>0b</i> from the 2017 paper, agent series without new entrant firms	109
4.5	Case 1, 100 entrepreneurs and 100,000 workers, macro-variable series	113
4.6	Case 1, 100 entrepreneurs and 100,000 workers, agent series	114
4.7	Case 2, 1,000 entrepreneurs and 100,000 workers, macro-variable series	116
4.8	Case 2, 1,000 entrepreneurs and 100,000 workers, agent series	116
4.9	Case 3, 10 entrepreneurs and 100,000 workers, macro-variable series	118

x	<i>List of Illustrations</i>
4.10 Case 3, 10 entrepreneurs and 100,000 workers, agent series	118
4.11 Case 4, 20 entrepreneurs and 100,000 workers, macro-variable series	120
4.12 Case 4, 20 entrepreneurs and 100,000 workers, agent series	121
4.13 Case 5, 20 entrepreneurs and 100,000 workers, macro-variable series	124
4.14 Case 5, 20 entrepreneurs and 100,000 workers, agent series	124
4.15 Case 6, 50 entrepreneurs and 10,000 workers, macro-variable series	126
4.16 Case 6, 50 entrepreneurs and 10,000 workers, agent series	126
4.17 A scatter plot from Table 4.25 (SMAC cases)	132
4.18 Case 7, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line	140
4.19 Case 7, 10 entrepreneurs and 10,000 workers, agent series	141
4.20 Case 7 <i>b</i> , 10 entrepreneurs and 10,000 workers, macro-variable series. The wage line is superimposed to the hPSd line. The plannedP line is superimposed to the totalProd line	143
4.21 Case 8, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line	145
4.22 Case 8, 10 entrepreneurs and 10,000 workers, agent series	146
4.23 Case 8 <i>b</i> , 10 entrepreneurs and 10,000 workers, macro-variable series. The wage line is superimposed to the hPSd line. The plannedP line is superimposed to the totalProd line	147
4.24 Case 9, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line, but the value at pos. 21 on the x-axis	150
4.25 Case 9, 10 entrepreneurs and 10,000 workers, agent series	151

<i>List of Illustrations</i>	xi
4.26 Case 9b, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line, but the value at pos. 28 on the x-axis	153
4.27 Case 9b, 10 entrepreneurs and 10,000 workers, agent series	154
4.28 Case 10, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line	156
4.29 Case 10, 10 entrepreneurs and 10,000 workers, agent series	156
4.30 Case 11, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line, but the value at pos. 19 on the x-axis	161
4.31 Case 11, 10 entrepreneurs and 10,000 workers, agent series	161
4.32 Case 8modPars, 10 entrepreneurs and 10,000 workers, macro-variable series. The plannedP line is superimposed to the totalProd line	166
4.33 Case 8modPars, 10 entrepreneurs and 10,000 workers, agent series	166
5.1 Births and deaths of enterprises (x 1,000)	169
5.2 Ratio births/deaths enterprises	169
5.3 Birth/deaths enterprise ratio versus GDP rate of change	170
5.4 The dynamic of the markup	171
5.5 GDP dynamic–markup–births/deaths ratio of the enterprises	171
A.1 An example of initially not overlapping buyers' price curve (black) and sellers' price curve (gray)	183
A.2 Simplified Hayekian case: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	184
A.3 Simplified Hayekian case: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	184

A.4	Unstructured case: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	186
A.5	Unstructured case: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	186
A.6	An example of initially not overlapping buyers' price and sellers' price curves, case $nBuyers \gg nSellers$	187
A.7	Simplified Hayekian case, with $nBuyers \gg nSellers$ : (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	188
A.8	Simplified Hayekian case, with $nBuyers \gg nSellers$ : (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	188
A.9	Simplified Hayekian case, with $nBuyers \gg nSellers$ but with equivalent effects: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	190
A.10	Simplified Hayekian case, with $nBuyers \gg nSellers$ but with equivalent effects: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	190
A.11	Simplified Hayekian case, with $nBuyers \gg nSellers$ but squeezing the effects: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	191
A.12	Simplified Hayekian case, with $nBuyers \gg nSellers$ but squeezing the effects: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	191
A.13	An example of initially not overlapping buyers' price and sellers' price curves, case $nBuyers \ll nSellers$	192

<i>List of Illustrations</i>	xiii
A.14 Simplified Hayekian case, with $nBuyers \ll nSellers$ : (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	193
A.15 Simplified Hayekian case, with $nBuyers \ll nSellers$ : (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	194
A.16 Simplified Hayekian case, with $nBuyers \gg nSellers$ with equivalent effects: (i) an example of final demand and offer curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	195
A.17 Simplified Hayekian case, with $nBuyers \gg nSellers$ but with equivalent effects: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	195
A.18 Simplified Hayekian case, with $nBuyers \gg nSellers$ but squeezing the effects: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	197
A.19 Simplified Hayekian case, with $nBuyers \gg nSellers$ but squeezing the effects: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	197
A.20 Corrupting the simplified Hayekian case: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	199
A.21 Corrupting the simplified Hayekian case: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	199
A.22 Extending the simplified Hayekian case: after 10,000 actions we see here a <i>flash</i> image of the buyers ordered following their reservation prices, with the	

	number of recent consecutive unsuccessful buying attempts	200
A.23	Extending the simplified Hayekian case: (i) an example of final buyers' price and sellers' price curves, (ii) the history of mean prices tick-by-tick, (iii) their coefficients of variation within each tick (cycle)	201
A.24	Extending the simplified Hayekian case: (i) the distribution of mean prices of each cycle (i.e., tick-by-tick) and (ii) that of their standard deviations within each tick (cycle)	202
A.25	Extending the simplified Hayekian case: after 20,000 actions, each buyer (here the buyers are ordered following their reservation prices) has been successful in concluding a deal only in about 10,000 cases	202
C.1	The representation of the schedule	213

## Tables

4.1	Legends	<i>page</i> 107
4.2	Case <i>0a</i> from the 2017 paper, correlations with new entrant firms	110
4.3	Case <i>0a</i> from the 2017 paper, partial correlations (excluding plannedProduction) with new entrant firms	111
4.4	Case <i>0a</i> from the 2017 paper, partial correlations (excluding totalProduction) with new entrant firms	111
4.5	Case <i>0b</i> from the 2017 paper, correlations without new entrant firms	112
4.6	Case 1, 100 entrepreneurs and 100,000 workers, correlations	114
4.7	Case 1, partial correlations (excluding plannedProduction)	115
4.8	Case 1, partial correlations (excluding totalProduction)	115
4.9	Case 2, 1,000 entrepreneurs and 100,000 workers, correlations	117
4.10	Case 2, partial correlations (excluding plannedProduction)	117
4.11	Case 2, partial correlations (excluding totalProduction)	119
4.12	Case 3, 10 entrepreneurs and 100,000 workers, correlations	119
4.13	Case 4, 20 entrepreneurs and 100,000 workers, correlations	119
4.14	Case 4, partial correlations (excluding plannedProduction)	122
4.15	Case 4, partial correlations (excluding totalProduction)	122

xvi	<i>List of Tables</i>
4.16 Case 4, 20 entrepreneurs and 100,000 workers, correlations, $t$ in 1–25	122
4.17 Case 4, 20 entrepreneurs and 100,000 workers, correlations, $t$ in 26–50	123
4.18 Case 5, 50 entrepreneurs and 100,000 workers, correlations	123
4.19 Case 5, partial correlations (excluding plannedProduction)	125
4.20 Case 5, partial correlations (excluding totalProduction)	125
4.21 Case 6, 50 entrepreneurs and 10,000 workers, correlations	127
4.22 Case 6, partial correlations (excluding plannedProduction)	127
4.23 Case 6, partial correlations (excluding totalProduction)	128
4.24 Countercyclical markup presence	128
4.25 Moving from <i>atomistic</i> markets to <i>oligopolistic</i> ones	129
4.26 Case 7, 10 entrepreneurs and 10,000 workers, correlations ( $t = 1$ –75 series)	141
4.27 Case 7, partial correlations (excluding plannedProduction) ( $t = 1$ –75 series)	142
4.28 Case 7, partial correlations (excluding totalProduction) ( $t = 1$ –75 series)	142
4.29 Case 7, partial correlations (excluding totalProduction) ( $t = 46$ –75 series)	143
4.30 Case 8, 10 entrepreneurs and 10,000 workers, correlations	144
4.31 Case 8, partial correlations (excluding plannedProduction)	146
4.32 Case 8, partial correlations (excluding totalProduction)	147
4.33 Case 8 <i>b</i> , 10 entrepreneurs and 10,000 workers, correlations	148
4.34 Case 8 <i>b</i> , partial correlations (excluding plannedProduction)	148

<i>List of Tables</i>	xvii
4.35 Case 8 <i>b</i> , partial correlations (excluding totalProduction)	148
4.36 Case 9, 10 entrepreneurs and 10,000 workers, correlations	152
4.37 Case 9, partial correlations (excluding plannedProduction)	152
4.38 Case 9, partial correlations (excluding totalProduction)	152
4.39 Case 9 <i>b</i> , 10 entrepreneurs and 10,000 workers, correlations	154
4.40 Case 9 <i>b</i> , partial correlations (excluding plannedProduction)	155
4.41 Case 9 <i>b</i> , partial correlations (excluding totalProduction)	155
4.42 Case 10, 10 entrepreneurs and 10,000 workers, correlations	158
4.43 Case 10, partial correlations (excluding plannedProduction)	159

## *Notes on Contributors*

Marco Mazzoli is associate professor of Economic Policy at the University of Genoa (Italy). He holds a PhD in Economics from the University of Warwick. He has published various papers in international journals and, with Cambridge University Press, he published in 1998 the research monograph *Credit, Investments and the Macroeconomy*. His research fields include macroeconomics, monetary economics and financial markets.

Matteo Morini got his PhD at the Ecole Normale Supérieure de Lyon, France; he works on complex networks, and develops agent-based and econometric models at the University of Torino. He is also employed at the Institut für Wirtschafts- und Verwaltungsinformatik at the Universität Koblenz-Landau, teaches courses on complex systems in the Carlo Alberto postgraduate programme and sits in the board of directors (as vice-president) of the Swarm Development Group. He co-authored and co-edited two books on complexity and ABMs. For more of his work, see <http://perso.ens-lyon.fr/matteo.morini>.

Pietro Terna is a retired professor of the University of Torino (Italy), where he was a full professor of economics. His research work is in the fields of (i) artificial neural networks for economic applications and (ii) social simulation with agent-based models (where he has been pioneering the use of Swarm, [www.swarm.org](http://www.swarm.org)). He has prepared a new agent-based simulation tool in Python (Swarm-Like Agent Protocol in Python), SLAPP (<https://terna.github.io/SLAPP/>), deriving it from the Swarm project. He is currently teaching a course on econophysics for the master degree in physics for complex systems at the University of Torino. His publications and projects can be found at <https://terna.to.it>.

Simone Lombardini is a PhD student at the University of Genoa, Italy, where he got his master's degree in economics and financial
