- capital goods
- purchase of, 118
- capital investments
- SNA and, 118
- capital market
- personal savings and, 118
- capital transactions account, 120
- carbon dioxide emissions, 618
- MRIO consumption-based attribution of, 622

800 **Subject Index**

- carbon footprint
  - cities, economic sectors and firms, 620
  - global multiregional input–output (GMRIO) model, 614–25
  - input–output analysis and, 8, 619
- Central Intelligence Agency, 778
- Central Place Theory, 457
- CHARM. *See* Cross-Hauling Adjusted Regionalization Method (CHARM)
- Chenery–Moses model, 71, 82–96
- China–Japan Transnational Interregional Input–Output (TIIO) Model, 480–2
- Chinese multiregional input–output (CMRIO) model, 85
  - development of, 476
  - important transactions data in, 323
  - location quotients, 460
  - multiplier decomposition, 385
  - multipliers in, 264
  - regional aggregation in, 104
  - regional classifications in, 105
  - sectoral aggregation in, 105
- circular economy
  - EEIOA models, 657
  - Leontief’s flow model, 776
- circular flow of income and expenditure
  - depreciation and, 119
  - savings and investment in, 115
  - social accounting matrices, 776
  - System of National Accounts (SNA), 116
- cities and smaller areas, regional and interregional models, 102
- classical production function, 17
- climate change, energy use and, 484
- closed input–output model, 35–42
- closed loop multipliers, 520
  - multipliers, 520
- coefficients
  - capital coefficients, 611
  - defined, 178
  - elasticities, 335
  - employment coefficients, 335, 349
  - fields of influence, 321
  - gross output important coefficients, 330
  - matrix exchange, 462
  - matrix transactions updating vs., 412
  - national coefficients, 401–4
  - RAS updating approach, 410–35
  - regional coefficients, 406
  - trend analysis, 408
  - updating and projecting, 408–10
- column-coefficient model, 82
- columns only (purchases only) approach, 489
- combined heat and power (CHP), 552
- commodity technology models
  - commodity-by-industry accounting, 197–201
  - derivation of transactions matrices, 218
  - mixed technology models, 207
  - negative value elimination in, 223–34
  - nonsquare systems, 205
- commodity-balance technique, 448
- commodity-based classification, imports, 146
- commodity-by-industry input–output models, 133, 139, 656, 659
  - accounting relationships, 6, 202
  - basic principles, 5
- commodity composition of industry outputs, 178
- commodity technology, 197–201
  - derivation of transactions matrices, 218
  - direct requirements (technical coefficients) matrices, 196
  - energy models, 571
  - environmental factors, 626
  - evolution of, 176
  - fully integrated environmental models, 656
  - industry source of outputs, 182
  - industry technology model, 197
  - interregional input–output (IRIO) model, 195
  - inter-state flows, 469
  - limited economic-ecologic model, 626
  - Make matrix, 177–9, 181, 185, 209, 571
  - market shares matrix, 157, 182
  - mixed technology models, 207–16
  - model selection criteria, 202
  - multiregional models, 195
  - negative elements, 190–204
  - nonsquare systems, 199–206
  - output multipliers, 238
  - product (commodity) matrix, 177
  - regional and multiregional models, 157
  - secondary production, 136
  - singularity in, 193
  - substate region estimates, 468
  - supply matrix, 136, 139, 179
  - system of national accounts and, 115, 138
  - total requirements matrices, 237
  - use matrix, 125, 136, 177–9
- commodity-demand driven models
  - output multipliers, 245
  - total requirements matrices, 182, 196
- community input–output models, location quotients, 457
- comparative advantage, 775
- compensating adjustments, 204
- competitive imports, 29
  - approximation procedures, 151
  - defined, 142
  - domestic transactions matrix, 145
  - removal from total transaction tables, 128–52
- complete hypothetical extraction backward linkages, 302
- complete hypothetical extraction forward linkage, 305
- completely closed model, 41
- composite scenario, 650, 652
- compounding, growth rate measurements, 395
- computable general equilibrium (CGE) model, 742
- computer speed and capacity, 32
- connected-region input–output model, 69
- consistent scenario, 649
- constant prices
  - double deflation and, 158
  - structural change and, 405

- constrained optimization, RAS biproportional scaling technique, 431
- consumer expenditures  
 producer's prices, 139  
 savings and investment in, 115  
 System of National Accounts (SNA), 116
- consumption  
 capital goods, 118  
 endogenous households, 41  
 energy input-output analysis, 577  
 final demand and, 15  
 single-region input-output models, 69
- consumption account, 504
- cost, insurance and freight (CIF), 143
- cost-push input-output price model, 46, 298
- CRAS (cell-corrected RAS) model, 430
- cross multipliers, 520
- Cross-Hauling Adjusted Regionalization Method (CHARM), 453, 457  
 symmetric input-output tables (SIOTs), 453
- cross-hauling issue, location quotients and commodity-balance approach, 450–5
- cross-industry quotient (CIQ), 447
- current prices, structural change and, 405
- data  
 problems and solutions, input-output analysis, 8
- data harmonization, 235
- data stability  
 constant vs. current prices, 405  
 input-output models, 400–40  
 national coefficients, 401–4
- DEBRIOT. *See* Double-Entry Bi-Regional Input-Output Tables (DEBRIOT)
- decomposition, 347  
 additive (structural) decomposition, 348–68  
 multiplicative structural decomposition analysis (MSDA), 349–75  
 multipliers, 375–85  
 next-level decompositions, 348–55  
 SAM multipliers, 518  
 structural path analysis, 375–86  
 structural path decomposition, 368–93
- deflation, double deflation, 158–61
- demand-pull input-output quantity model, 46
- depreciation, 119
- derivation of transactions matrices  
 commodity technology, 218  
 commodity-by-industry accounting, 218  
 industry technology model, 218
- deviational variables, goal programming, 638
- difference equations, dynamic input-output models, 699
- direct allocations matrix, 141
- direct backward linkage, 303
- direct effects  
 multiplier input-output analysis, 278  
 output-to-output multiplier elasticity, 282  
 SAM multipliers, 520
- direct energy requirement, 552, 554
- direct impact coefficients, pollution impact assessment, 306
