The Cambridge Handbook of Political Psychology

The Cambridge Handbook of Political Psychology provides a comprehensive review of the psychology of political behaviour from an international perspective. Its coverage spans from foundational approaches to political psychology, including the evolutionary, personality, and developmental roots of political attitudes, to contemporary challenges to governance, including populism, hate speech, conspiracy beliefs, inequality, climate change, and terrorism. Each chapter features cutting-edge research from internationally renowned scholars who offer their unique insights into how people think, feel, and act in different political contexts. By taking a distinctively international approach, this handbook highlights the nuances of political behaviour across cultures and geographical regions, as well as the truisms of political psychology that transcend context. Academics, graduate students, and practitioners alike, as well as those generally interested in politics and human behaviour, will benefit from this definitive overview of how people shape – and are shaped by – their political environment in a rapidly changing twenty-first century.

Danny Osborne is an Associate Professor in the School of Psychology at the University of Auckland, New Zealand. His research focuses on the factors that contribute to, and impede, people’s intentions to redress inequality, with a particular emphasis on ideology and collective action. He has published more than 120 peer-reviewed articles and book chapters on core topics within political psychology.

Chris G. Sibley is a Professor in the School of Psychology at the University of Auckland, New Zealand. He is the founder of the New Zealand Attitudes and Values Study, a 20-year longitudinal national probability study of social and political attitudes. He has published more than 300 peer-reviewed journal articles and book chapters. He is also a co-editor of The Cambridge Handbook of the Psychology of Prejudice (2016).
