

Contents

	<i>Contents for New Spaces in Mathematics</i>	<i>page vii</i>
	Introduction	1
	<i>Mathieu Anel and Gabriel Catren</i>	
	PART I NONCOMMUTATIVE AND SUPERCOMMUTATIVE GEOMETRIES	21
1	Noncommutative Geometry, the Spectral Standpoint	23
	<i>Alain Connes</i>	
2	The Logic of Quantum Mechanics (Revisited)	85
	<i>Klaas Landsman</i>	
3	Supergeometry in Mathematics and Physics	114
	<i>Mikhail Kapranov</i>	
	PART II SYMPLECTIC GEOMETRY	153
4	Derived Stacks in Symplectic Geometry	155
	<i>Damien Calaque</i>	
5	Higher Prequantum Geometry	202
	<i>Urs Schreiber</i>	
	PART III SPACETIME	279
6	Struggles with the Continuum	281
	<i>John C. Baez</i>	

7	Twistor Theory: A Geometric Perspective for Describing the Physical World	327
	<i>Roger Penrose</i>	
8	Quantum Geometry of Space	373
	<i>Muxin Han</i>	
9	Stringy Geometry and Emergent Space	407
	<i>Marcos Mariño</i>
