

Government Statistical Agencies and the Politics of Credibility

Who decides how official statistics are produced? Do politicians have control or are key decisions left to statisticians in independent statistical agencies? Interviews with statisticians in Australia, Canada, Sweden, the UK and the USA were conducted to get insider perspectives on the nature of decision making in government statistical administration. While the popular adage suggests there are ‘lies, damned lies and statistics’, this research shows that official statistics in liberal democracies are far from mistruths; they are consistently insulated from direct political interference. Yet, a range of subtle pressures and tensions exist that governments and statisticians must manage. The power over statistics is distributed differently in different countries, and this book explains why. Differences in decision-making powers across countries are the result of shifting pressures politicians and statisticians face to be credible, and the different national contexts that provide distinctive institutional settings for the production of government numbers.

COSMO HOWARD is Senior Lecturer, School of Government and International Relations, Griffith University. He has taught political science, public policy and administration in Australia and Canada. His research has been published in several books and leading international journals including *Governance and Public Administration*. He has worked as a consultant for Australian and Canadian governments.

Cambridge Studies in Comparative Public Policy

The **Cambridge Studies in Comparative Public Policy** series was established to promote and disseminate comparative research in public policy. The objective of the series is to advance the understanding of public policies through the publication of the results of comparative research into the nature, dynamics and contexts of major policy challenges and responses to them. Works in the series will draw critical insights that enhance policy learning and are generalizable beyond specific policy contexts, sectors and time periods. Such works will also compare the development and application of public policy theory across institutional and cultural settings and examine how policy ideas, institutions and practices shape policies and their outcomes. Manuscripts comparing public policies in two or more cases as well as theoretically informed critical case studies which test more general theories are encouraged. Studies comparing policy development over time are also welcomed.

Acknowledgements and Declaration

I started this project on government statistical agencies in 2004. In the intervening years, many people and organisations have helped to make the research possible. I would like to acknowledge the support of the Killam Trusts in providing me a post-doctoral fellowship to start this project in the Department of Political Science at the University of Alberta. I also received a grant from the Social Sciences and Humanities Research Council of Canada (SSHRC) to fund part of the research that informs this book.

This project would not have been possible without the support of statistical agencies in the five case countries. I would like to thank the following organisations for allowing me access to interview staff: the Australian Bureau of Statistics; Statistics Canada; in Sweden: the National Agency for Education, National Institute of Economic Research, National Mediation Office, Swedish Agency for Cultural Policy Analysis, Swedish National Debt Office, National Board of Health and Welfare, Statistics Sweden, and Transport Analysis; in the United Kingdom: HM Revenue and Customs, Department for Work and Pensions, the Office for National Statistics, Statistics Commission and United Kingdom Statistics Authority; in the United States of America: the Bureau of Economic Analysis, Bureau of Justice Statistics, Bureau of Labor Statistics, Energy Information Administration, National Centre for Health Statistics, Office of Management and Budget, Social Security Administration and the United States Census Bureau. I would also like to thank the Royal Statistical Society for allowing me to interview members.

I am grateful to the following statistical professionals for commenting on drafts of case study chapters: Richard Alldritt, Johanne Ascoli, Magnus Häll, Brian Harris-Kojetin, Cathy Kruger, Larry Shute, and Katherine Wallman. All errors and omissions are mine.

A number of academic colleagues have been extremely helpful with this research. I was assisted in securing SSHRC funding at the University of Victoria by Herman Bakvis, who also provided input into the initial design of the research. Rebecca Sergeant provided research assistance in the early phases of the project. At Griffith University, many of my colleagues in the School of Government and International Relations and Centre for Governance and Public Policy have given helpful feedback on my work along the way. I would particularly like to acknowledge Duncan McDonnell, Haig Patapan, Patrick Weller, and Xu Yi-Chong for their comments and suggestions. I would also like to acknowledge Dennis Grube, who collaborated with me on an earlier case study of Canadian official statistics (Grube and Howard 2016) and whose input has influenced my analysis in this volume.

No project of this size and duration is possible without the personal support of friends and loved ones. I want to thank my mum, Lucienne Fontannaz, and my dad, Ian Howard for their encouragement and advice. I would also like to thank Julia Smith for her care and inspiration.

Finally, I would like to declare that I was engaged by the Canadian Ministry of Industry in 2016 on a consultancy basis to provide a written report on options for strengthening the independence of Statistics Canada.

Acronyms and Abbreviations

ABARES	Australian Bureau of Agricultural and Resource Economics and Sciences
ABS	Australian Bureau of Statistics
ACS	American Community Survey
AIFS	Australian Institute of Family Studies
