

## Index

- aggregate demand, maldistribution of income
  - influenced by, 88–89
- asset prices
  - rudimentary wealth and, 50
  - for valuation ratio  $K$ , 50–51
  - for valuation ratio  $q$ , 52–53, 54
- Barbosa, Nelson, 79
- Bernanke, Ben, 52
- Blanchard, Olivier, 42–43
- Brandeis, Louis, 82
- business capital stock, 45
- business savings
  - in capital theory, as equity, 49
  - flow of funds and, 39
- capital gains, 13–14
  - middle-class household incomes
    - influenced by, 32
  - wealth fund and, 119
- capital theory, 42
  - asset prices
    - rudimentary wealth and, 50
    - for valuation ratio  $q$ , 52–53, 54
  - Cambridge controversy, 42–44
  - equity in, 47–50
    - business savings, 49
    - holding losses, 49
  - interest rates in, 51–52
  - macroeconomic inequality and, 91–92
    - in Solow-Swan model, 91–92
  - market forces in, 56–57
  - perpetual inventory in, 46, 47
  - production cost minimization in, 43
  - social forces in, 56–57
  - wealth in, 44–46
    - business capital stock, 45
    - distribution data, 54–56
    - in Solow-Swan model, 45, 46
    - total capital stock, 45
- Congressional Budget Office (CBO)
  - flow of funds definitions, 40–41
  - income distribution data, 10–11
- costs, in SAM, 28–29
- demand dynamics, 96–97
  - low income-led, 101–103
  - in SAM, 28–29
- demand-driven economic models
  - comparative statics in, 121
  - productivity growth rates in, 111–116
  - prospects for, 106–107
  - real wages in, 111–116
    - medium run scenarios, 114
    - in Palma ratios, 115
  - redistribution packages, 118
    - in Palma ratios, 120
  - short-term policy perspectives, 128.170.107–108, 109–111
    - SAM and, 107
    - WAM and, 107
  - wealth fund in, 117–118
    - capital gains taxes and, 119
  - wealth trends in, 116–117
- DSGE model. *See* dynamic stochastic general equilibrium
- dual economies, 58, 63–66
  - dynamic sectors in, 65
  - government transfers in, 64
  - mean incomes per household, 65
  - stagnation in, 65
  - total household incomes in, 65
- dynamic stochastic general equilibrium (DSGE) model, 99
- employment
  - growth of, 70–72
    - decomposition of, 71
    - share growth in, 71
  - maldistribution of income influenced by, 89–91

- equity, in capital theory, 47–50  
   business saving, 49  
   holding losses, 49
- financial transfers  
   in macroeconomic income distribution,  
     35–37  
     for high-income households, 36  
     for low-income households, 36  
     for middle-class households, 36
