Preface	xiii
Historical Prologue	xix
1 One-Dimensional Viscoelasticity	1
1.1 Constitutive Law	1
1.2 Stored and Dissipated Energy	5
1.3 Physical Models	7
1.4 Equation of Motion	15
1.5 Problems	17
2 Three-Dimensional Viscoelasticity	19
2.1 Constitutive Law	19
2.2 Stress-Strain Notation	20
2.3 Equation of Motion	23
2.4 Correspondence Principle	25
2.5 Energy Balance	26
2.6 Problems	30
3 Viscoelastic P, SI, and SII Waves	32
3.1 Solutions of Equation of Motion	32
3.2 Particle Motion for P Waves	37
3.3 Particle Motion for Elliptical and Linear S Waves	40
3.3.1 Type-I or Elliptical S (SI) Wave	42
3.3.2 Type-II or Linear S (SII) Wave	45
3.4 Energy Characteristics of P, SI, and SII Waves	46
3.4.1 Mean Energy Flux (Mean Intensity)	46
3.4.2 Mean Energy Densities	50
3.4.3 Energy Velocity	52
3.4.4 Mean Rate of Energy Dissipation	53
3.4.5 Reciprocal Quality Factor, Q^{-1}	54

viii	<i>Contents</i>	
	3.5 Viscoelasticity Characterized by Parameters for Homogeneous P and S Waves	57
	3.6 Characteristics of Inhomogeneous Waves in Terms of Characteristics of Homogeneous Waves	59
	3.6.1 Wave Speed and Maximum Attenuation	59
	3.6.2 Particle Motion for P and SI Waves	64
	3.6.3 Energy Characteristics for P, SI, and SII Waves	66
	3.7 P, SI, and SII Waves in Low-Loss Viscoelastic Media	75
	3.8 P, SI, and SII Waves in Media with Equal Complex Lamé Parameters	82
	3.9 P, SI, and SII waves in a Standard Linear Solid	84
	3.10 Displacement and Volumetric Strain	86
	3.10.1 Displacement for General P and SI Waves	86
	3.10.2 Volumetric Strain for a General P Wave	92
	3.10.3 Simultaneous Measurement of Volumetric Strain and Displacement	93
	3.11 Problems	96
4	Framework for Single-Boundary Reflection-Refraction and Surface-Wave Problems	98
	4.1 Specification of Boundary	98
	4.2 Specification of Waves	100
	4.3 Problems	106
5	General P, SI, and SII Waves Incident on a Viscoelastic Boundary	107
	5.1 Boundary-Condition Equations for General Waves	107
	5.2 Incident General SI	109
	5.2.1 Specification of Incident General SI Wave	109
	5.2.2 Propagation and Attenuation Vectors; Generalized Snell's Law	111
	5.2.3 Amplitude and Phase	114
	5.2.4 Conditions for Homogeneity and Inhomogeneity	115
	5.2.5 Conditions for Critical Angles	120
	5.3 Incident General P Wave	123
	5.3.1 Specification of Incident General P Wave	123
	5.3.2 Propagation and Attenuation Vectors; Generalized Snell's Law	125
	5.3.3 Amplitude and Phase	126
	5.3.4 Conditions for Homogeneity and Inhomogeneity	127
	5.3.5 Conditions for Critical Angles	128

<i>Contents</i>		xi
5.4 Incident General SII Wave		130
5.4.1. Specification of Incident General SII Wave		130
5.4.2 Propagation and Attenuation Vectors; Generalized Snell's Law		131
5.4.3 Amplitude and Phase		133
5.4.4 Conditions for Homogeneity and Inhomogeneity		134
5.4.5 Conditions for Critical Angles		134
5.4.6 Energy Flux and Energy Flow Due to Wave Field Interactions		135
5.5 Problems		141
6 Numerical Models for General Waves Reflected and Refracted at Viscoelastic Boundaries		143
6.1 General SII Wave Incident on a Moderate-Loss Viscoelastic Boundary (Sediments)		144
6.1.1 Incident Homogeneous SII Wave		145
6.1.2 Incident Inhomogeneous SII Wave		151
6.2 P Wave Incident on Low-Loss Viscoelastic Boundary (Water, Stainless-Steel)		155
6.2.1 Reflected and Refracted Waves		156
6.3 Experimental Confirmation of Viscoelastic Wave Theory		163
6.4 Viscoelastic Reflection Coefficients for Ocean, Solid-Earth Boundaries		165
6.5 Problems		168
7 General SI, P, and SII Waves Incident on a Viscoelastic Free Surface		170
7.1 Boundary-Condition Equations		170
7.2 Incident General SI Wave		172
7.2.1 Reflected General P and SI Waves		172
7.2.2 Displacement and Volumetric Strain		176
7.2.3 Numerical Model for Low-Loss Media (Weathered Granite)		181
7.3 Incident General P Wave		191
7.3.1 Reflected General P and SI Waves		191
7.3.2 Numerical Model for Low-Loss Media (Pierre Shale)		195
7.4 Incident General SII Wave		200
7.5 Problems		202
8 Rayleigh-Type Surface Wave on a Viscoelastic Half Space		203
8.1 Analytic Solution		203
8.2 Physical Characteristics		207

x	<i>Contents</i>	
	8.2.1 Velocity and Attenuation Coefficient	207
	8.2.2 Propagation and Attenuation Vectors for Component Solutions	208
	8.2.3 Displacement and Particle Motion	209
	8.2.4 Volumetric Strain	214
	8.2.5 Media with Equal Complex Lamé Parameters ($\lambda = \mu$)	216
	8.3 Numerical Characteristics of Rayleigh-Type Surface Waves	222
	8.3.1 Characteristics at the Free Surface	224
	8.3.2 Characteristics versus Depth	228
	8.4 Problems	239
9	General SII Waves Incident on Multiple Layers of Viscoelastic Media	241
	9.1 Analytic Solution (Multiple Layers)	242
	9.2 Analytic Solution (One Layer)	249
	9.3 Numerical Response of Viscoelastic Layers (Elastic, Earth's Crust, Rock, Soil)	250
	9.4 Problems	256
10	Love-Type Surface Waves in Multilayered Viscoelastic Media	258
	10.1 Analytic Solution (Multiple Layers)	258
	10.2 Displacement (Multiple Layers)	261
	10.3. Analytic Solution and Displacement (One Layer)	263
	10.4 Numerical Characteristics of Love-Type Surface Waves	266
	10.5 Problems	274
11	General Viscoelastic Ray Theory	276
	11.1 General SII Rays in Horizontal Layered Viscoelastic Media	277
	11.1.1 Viscoelastic Ray Parameters for Phase and Attenuation	287
	11.1.2 Viscoelastic Solution of Forward Ray-Tracing Problem	289
	11.1.3 Ray-Path, Wave-Propagation, and Travel-Time Characteristics	294
	11.1.4 Amplitude Attenuation Characteristics	302
	11.1.5 General Viscoelastic Head Waves	306
	11.1.6 Critical, Reversal, and Turning Points for Viscoelastic Rays	316
	11.1.7 Computation Steps (Forward Ray-Tracing Algorithm)	323
	11.1.8 Ray Characteristics in a Surface Layer	328
	11.1.9 Ray Characteristics in Underlying Layers; "Wide" Angle Refractions across Anelastic Boundaries (Earth's Mantle, Rock, Soil)	332

<i>Contents</i>		xi
11.2	General SII Rays in Horizontal Viscoelastic Media with Vertical Material Gradients	339
11.2.1	Viscoelastic Ray Parameters for Phase and Attenuation	341
11.2.2	Viscoelastic Solution of Forward Ray-tracing Problem	342
11.2.3	Ray-Path, Wave-Propagation, and Travel-Time Characteristics	345
11.2.4	Amplitude Attenuation Characteristics	350
11.2.5	Critical, Reversal, and Turning Points for Viscoelastic Rays	352
11.3	General SII Rays in Spherical Layered Viscoelastic Media	355
11.3.1	Viscoelastic Ray Parameters for Phase and Attenuation	360
11.3.2	Viscoelastic Solution of Forward Ray-Tracing Problem	361
11.3.4	Ray- Path, Wave-Propagation, and Travel-Time Characteristics	364
11.3.4	Amplitude-Attenuation Characteristics	371
11.3.5	General Viscoelastic Head Waves (Spherical Layers)	374
11.3.6	Critical, Reversal, and Turning Points for Viscoelastic Rays	376
11.4	General SII Rays in Spherical Viscoelastic Media with Radial Material Gradients	379
11.4.1	Viscoelastic Ray Parameters for Phase and Attenuation	381
11.4.2	Viscoelastic Solution of Forward Ray-tracing Problem	382
11.4.3	Ray-Path, Wave-Propagation, and Travel-Time Characteristics	384
11.4.4	Amplitude-Attenuation Characteristics	392
11.4.5	Critical, Reversal, and Turning Points for Viscoelastic Rays	394
11.5	Forward Ray-Tracing Algorithms and Earth-Flattening Transformations for Horizontal and Spherical Viscoelastic Media	397
11.6	Inverse-Problem Solutions for Viscoelastic Media	408
11.6.1	Horizontal Media (Single and Multiple Layers)	409
11.6.1.1	Viscoelastic Material Parameters Inferred for Single Layer from Reflected Waves	409
11.6.1.2	Viscoelastic Material Parameters Inferred for Multiple Layers from Reflected Waves	413
11.6.1.3	Viscoelastic Material Parameters Inferred for Multiple Layers from Head Waves	416
11.6.2	Horizontal and Spherical Media with Material Gradients (Solution of Viscoelastic Herglotz-Wiechert Integral)	418
11.6.2.1	Viscoelastic Material Parameters Inferred for Half Space with Vertical Material Gradients	418
11.6.2.2	Viscoelastic Material Parameters Inferred for Sphere with Radial Material Gradients	423
11.7	Implications of Using Elastic Models to Describe General Rays in Anelastic Viscoelastic Media	426

xii	<i>Contents</i>	
	11.8 Problems	428
12	Appendices	433
	12.1 Appendix 1 – Properties of Riemann-Stieltjes Convolution Integral	433
	12.2 Appendix 2 – Vector and Displacement-Potential Identities	433
	12.2.1 Vector Identities	433
	12.2.2 Displacement-Potential Identities	434
	12.3 Appendix 3 – Solution of the Helmholtz Equation	434
	12.4 Appendix 4 – Roots of Squared Complex Rayleigh Equation	438
	12.5 Appendix 5 – Complex Root for a Rayleigh-Type Surface Wave	440
	12.6 Appendix 6 – Particle Motion Characteristics for a Rayleigh-Type Surface Wave	442
	12.7 Appendix 7 – Characteristics of General Waves in a Viscoelastic Surface Layer	445
	12.7.1 General SII Reflected Wave	445
	12.7.2 General SII Head Wave	452
	12.7.3 General SII Direct Wave	460
	12.8 Appendix 8 – Viscoelastic Herglotz-Wiechert Integral for Spherical Media with Radial Gradients	465
	References	468
	Additional Reading – first edition	473
	Additional Reading – second edition (Observations, Empirical Interpretations, and Applications of the Theory of Viscoelastic Waves in Layered Media)	474
	Index	478
