Preface	xi
Introduction	1
<b>Part I. Species and operads</b>	<b>17</b>
Chapter 1. Hyperplane arrangements	19
1.1. Faces, bifaces, flats	19
1.2. Nested faces and lunes	25
1.3. Partial-flats	27
1.4. Minimal galleries, distance functions, Varchenko matrices	29
1.5. Incidence algebras, and zeta and Möbius functions	34
1.6. Bilune-incidence algebra	40
1.7. Descent, lune, Witt identities	46
1.8. Noncommutative Zaslavsky formula	49
1.9. Birkhoff algebra, Tits algebra, Janus algebra	52
1.10. Takeuchi element	62
1.11. Orientation space and signature space	64
1.12. Lie and Zie elements	66
1.13. Braid arrangement	70
Notes	71
Chapter 2. Species and bimonoids	73
2.1. Species	74
2.2. Monoids, comonoids, bimonoids	77
2.3. (Co)commutative (co)monoids	81
2.4. Deformed bimonoids and signed bimonoids	88
2.5. Signed (co)commutative (co)monoids	91
2.6. Subspecies and quotient species	94
2.7. (Co)abelianizations of (co)monoids	96
2.8. Generating subspecies of monoids	99
2.9. Duality functor on species	100
2.10. Op and cop constructions	102
2.11. Monoids, comonoids, bimonoids as functor categories	105
2.12. Presentation for (co)monoids using covering generators	113
2.13. Partially commutative monoids	118
2.14. Set-species and set-bimonoids	121

vi	CONTENTS	
	2.15.	Bimonoids for a rank-one arrangement 123
	2.16.	Joyal species and Joyal bimonoids 124
	Notes	127
Chapter	3.	Bimonads on species 134
	3.1.	Bimonoids as bialgebras over a bimonad 135
	3.2.	Bicommutative bimonoids as bialgebras over a bimonad 140
	3.3.	Duality as a bilax functor 145
	3.4.	Opposite transformation 147
	3.5.	Lifting of monads to comonoids 150
	3.6.	Monad for partially commutative monoids 151
	3.7.	Bimonad for set-species 154
	3.8.	Symmetries, braidings, lax braidings 158
	3.9.	LRB species 162
	3.10.	Mesablishvili–Wisbauer 164
	Notes	167
Chapter	4.	Operads 168
	4.1.	Dispecies 169
	4.2.	Operads 170
	4.3.	Set-operads 174
	4.4.	Connected and positive operads 175
	4.5.	Commutative, associative, Lie operads 176
	4.6.	May operads 178
	4.7.	Hadamard product. Hopf operads 179
	4.8.	Orientation functor and signature functor 181
	4.9.	Operad presentations 182
	4.10.	Black and white circle products 187
	4.11.	Left modules over operads 190
	4.12.	Bioperads. Mixed distributive laws 196
	4.13.	Incidence algebra of an operad 199
	4.14.	Operads for LRB species 202
	Notes	203
<b>Part II.</b>	<b>Basic theory of bimonoids</b>	<b>205</b>
Chapter	5.	Primitive filtrations and decomposable filtrations 207
	5.1.	Cauchy powers of a species 208
	5.2.	Graded and filtered bimonoids 211
	5.3.	Primitive filtrations of comonoids 214
	5.4.	Decomposable filtrations of monoids 218
	5.5.	Trivial (co)monoids and (co)derivations 221
	5.6.	Bimonoid axiom on the primitive part 222
	5.7.	Primitively generated bimonoids and cocommutativity 226
	5.8.	Browder–Sweedler and Milnor–Moore 229
	Notes	232

## CONTENTS

vii

Chapter 6.	Universal constructions	235
6.1.	Free monoids on species	236
6.2.	Cofree comonoids on species	240
6.3.	(Co)free (co)commutative (co)monoids on species	243
6.4.	(Co)free bimonoids associated to species	250
6.5.	(Co)free (co)commutative bimonoids associated to species	255
6.6.	(Co)abelianizations of (co)free (co)monoids	259
6.7.	Primitive filtrations and decomposable filtrations	261
6.8.	Alternative descriptions of bimonoids	263
6.9.	Norm transformation	265
6.10.	(Co)free graded (co)monoids on species	270
6.11.	Free partially bicommutative bimonoids	275
	Notes	277
Chapter 7.	Examples of bimonoids	283
7.1.	Species characteristic of chambers	284
7.2.	Exponential species	285
7.3.	Species of chambers	288
7.4.	Species of flats	294
7.5.	Species of charts and dicharts	298
7.6.	Species of faces	301
7.7.	Species of top-nested faces and top-lunes	312
7.8.	Species of bifaces	320
7.9.	Lie and Zie species	326
	Notes	330
Chapter 8.	Hadamard product	335
8.1.	Hadamard functor	336
8.2.	Internal hom for the Hadamard product	342
8.3.	Biconvolution bimonoids	343
8.4.	Internal hom for comonoids. Bimonoid of star families	347
8.5.	Species of chamber maps	355
8.6.	Universal measuring comonoids	358
8.7.	Enrichment of the category of monoids over comonoids	363
8.8.	Internal hom for monoids and bimonoids	367
8.9.	Hadamard product of set-species	375
8.10.	Signature functor	376
	Notes	381
Chapter 9.	Exponential and logarithm	384
9.1.	Exp-log correspondences	386
9.2.	Commutative exp-log correspondence	396
9.3.	Deformed exp-log correspondences	408
9.4.	0-exp-log correspondence	419
9.5.	Primitive and group-like series of bimonoids	422
9.6.	Primitive and group-like series of bicomm. bimonoids	427
9.7.	Comparisons between exp-log correspondences	431

9.8.	Formal power series. Series of Joyal species	433
	Notes	439
Chapter 10.	Characteristic operations	442
10.1.	Characteristic operations	443
10.2.	Commutative characteristic operations	452
10.3.	Two-sided characteristic operations	457
10.4.	Set-theoretic characteristic operations	459
10.5.	Idempotent operators on bimonoid components	460
	Notes	467
Chapter 11.	Modules over monoid algebras and bimonoids in species	469
11.1.	Modules over the Tits algebra	470
11.2.	Modules over the Birkhoff algebra	472
11.3.	Modules over the Janus algebra	472
11.4.	Examples	474
11.5.	Duality and base change	476
11.6.	Signed analogues	479
11.7.	A unified viewpoint via partial-biflats	480
11.8.	Karoubi envelopes	481
11.9.	Monoid-sets and bimonoids in set-species	485
11.10.	Bimonoids of h-faces and h-flats	486
	Notes	493
Chapter 12.	Antipode	495
12.1.	Takeuchi formula	495
12.2.	Interaction with op and cop constructions	499
12.3.	Commutative Takeuchi formula	503
12.4.	Logarithm of the antipode	505
12.5.	Examples	507
12.6.	Antipodes of (co)free bimonoids	512
12.7.	Antipodes of (co)free (co)commutative bimonoids	515
12.8.	Takeuchi element and characteristic operations	518
12.9.	Set-bimonoids	523
	Notes	525
<b>Part III.</b>	<b>Structure theory for bimonoids</b>	<b>529</b>
Chapter 13.	Loday–Ronco, Leray–Samelson, Borel–Hopf	531
13.1.	Loday–Ronco for 0-bimonoids	534
13.2.	Leray–Samelson for bicommutative bimonoids	538
13.3.	Borel–Hopf for cocommutative bimonoids	546
13.4.	Borel–Hopf for commutative bimonoids	556
13.5.	Unification using partially bicommutative bimonoids	560
13.6.	Rigidity of $q$ -bimonoids for $q$ not a root of unity	562
13.7.	Monad for Lie monoids	570
	Notes	571

## CONTENTS

ix

Chapter 14. Hoffman–Newman–Radford	575
14.1. Free 0-bimonoids on comonoids	576
14.2. Free bicommutative bimonoids on cocommutative comonoids	580
14.3. Free 0- $\sim$ -bicommutative bimonoids	587
14.4. Free bimonoids on cocommutative comonoids	588
14.5. Free $q$ -bimonoids on comonoids	597
14.6. Zeta and Möbius as inverses	605
Notes	607
Chapter 15. Freeness under Hadamard products	609
15.1. Freeness under Hadamard products	609
15.2. Product of free and cofree bimonoids	613
15.3. Product of free commutative and cofree cocommutative bimonoids	623
15.4. Product of bimonoids with one free factor	627
15.5. Species of pairs of chambers	629
Notes	636
Chapter 16. Lie monoids	638
16.1. Lie monoids	639
16.2. Commutator bracket and primitive part of bimonoids	642
16.3. Free Lie monoids on species	645
16.4. Lie species and Zie species as Lie monoids	648
16.5. Universal enveloping monoids	649
16.6. Abelian Lie monoids	659
16.7. Signed Lie monoids	660
16.8. Lie comonoids	664
Notes	671
Chapter 17. Poincaré–Birkhoff–Witt and Cartier–Milnor–Moore	678
17.1. Comonoid sections to the abelianization map	679
17.2. Poincaré–Birkhoff–Witt	682
17.3. Projecting the free monoid onto the free Lie monoid	687
17.4. Solomon operator	692
17.5. Cartier–Milnor–Moore	698
17.6. Lie monoids for a rank-one arrangement	703
17.7. Joyal Lie monoids	706
17.8. Lie monoids in LRB species	710
Notes	711
<b>Appendices</b>	<b>717</b>
Appendix A. Vector spaces	719
A.1. Kernel, cokernel, image, coimage	719
A.2. Duality functor on vector spaces	719
A.3. Internal hom for the tensor product	720
A.4. Linear maps between direct sums of vector spaces	720
A.5. Idempotent operators	721

Appendix B. Internal hom for monoidal categories	723
B.1. Monoidal and 2-monoidal categories	723
B.2. Internal hom	725
B.3. Powers and copowers	728
B.4. Internal hom for functor categories	730
B.5. Modules over a monoid algebra	733
Notes	735
Appendix C. Higher monads	738
C.1. Higher monads	738
C.2. Higher monad algebras	752
C.3. Adjunctions	758
Notes	760
References	763
List of Notations	802
List of Tables	812
Author Index	814
Subject Index	823
