

## The Handbook of Behavior Change

Social problems in many domains, including health, education, social relationships, and the workplace, have their origins in human behavior. The documented links between behavior and social problems have compelled governments and organizations to prioritize and mobilize efforts to develop effective, evidence-based means to promote adaptive behavior change. In recognition of this impetus, the *Handbook of Behavior Change* provides comprehensive coverage of contemporary theory, research, and practice on behavior change. It summarizes current evidence-based approaches to behavior change in chapters authored by leading theorists, researchers, and practitioners from multiple disciplines, including psychology, sociology, behavioral science, economics, philosophy, and implementation science. It is the go-to resource for researchers, students, practitioners, and policy makers looking for current knowledge on behavior change and guidance on how to develop effective interventions to change behavior.

MARTIN S. HAGGER is Professor of Health Psychology at the University of California, Merced and Finland Distinguished Professor in the Faculty of Sport and Health Sciences at the University of Jyväskylä.

LINDA D. CAMERON is Professor of Health Psychology and Department Chair of Psychological Sciences at the University of California, Merced.

KYRA HAMILTON is Associate Professor in the School of Applied Psychology at Griffith University.

NELLI HANKONEN is Associate Professor of Social Psychology in the Faculty of Social Sciences at the University of Helsinki.

TARU LINTUNEN is Professor of Sport and Exercise Psychology in the Faculty of Sport and Health Sciences at the University of Jyväskylä.

Figures

2.1	Theory of planned behavior	<i>page</i> 19
3.1	An illustration of social cognitive theory (Bandura, 2000a)	33
4.1	Schematic representation of the health belief model	47
4.2	Schematic representation of protection motivation theory	49
5.1	The common-sense model of self-regulation	61
6.1	The model of action phases	79
6.2	Meta-analysis of meta-analyses of implementation intention effects on goal achievement	84
7.1	The health action process approach (HAPA; Schwarzer 1992, 2008)	95
8.1	Diagram summarizing three key mini-theories of self-determination theory: Cognitive evaluation theory, organismic integration theory, and basic needs theory	106
8.2	Processes in self-determination theory (a) self-determination theory process model; (b) path model showing effects of a teacher-delivered autonomy-support intervention on school children’s leisure-time physical activity mediated by autonomous motivation and intention	109
9.1	The feedback control unit	122
9.2	An example of a control hierarchy for smoking behavior	124
10.1	Understanding treatment as promoting and assisting self-change	141
11.1	A diagram of integrative self-control theory (after Kotabe & Hofmann, 2015)	159
12.1	Overview of the structure of the reflective-impulsive model	169
13.1	The development of habit	180
13.2	Strategies to inhibit habit	185
14.1	Schematic illustration of a reinforcement learning model of behavior indicating possible points at which interventions may exert their effects	198
15.1	Schematic representation of the major theorists’ model	212
15.2	Schematic representation of the integrated behavioral model (Montaño & Kasprzyk, 2015)	214
15.3	Schematic representation of the prototype willingness model (Gibbons, Houlihan, & Gerrard, 2009)	214
15.4	Schematic representation of the integrated behavior change model (Hagger & Chatzisarantis, 2014)	217
17.1	Behavioral epidemiology framework	240
17.2	Common correlates associated with health behaviors	241
18.1	Socioecological approach indicating different levels of environmental influence on behavior	252

	List of Figures	xi
18.2	Logic model for relationships among behavior change methods, behavioral determinants, behaviors, environmental conditions, and desired outcomes such as health, safety, and quality of life (Bartholomew Eldredge et al., 2016)	259
19.1	The information–motivation–behavioral skills model (Fisher & Fisher, 1992)	274
20.1	Mapping the paths within the experimental medicine approach	288
23.1	Three overarching aims of using implementation science theories, models, and frameworks	337
26.1	Cost-effectiveness plane	378
27.1	Contribution of health behaviors to inequities in all-cause mortality by SES indicator in Petrovic et al. (2018)	390
29.1	Screenshot of the Fitz app, a digital behavior change intervention tool	418
33.1	Diagram illustrating the potential mechanisms of imagery interventions in changing behavior	483
35.1	Dimensions of motivating style and the specific instructional behaviors within the autonomy-supportive and controlling styles	511
35.2	Mechanisms of action within self-determination theory’s dual-process model	513
35.3	Procedural timeline for an autonomy-support intervention program (ASIP)	518
36.1	Impediments and facilitators of behavior change	524
36.2	Average gym visits with and without incentives	526
37.1	A framework showing how monitoring may lead to changes in behavior	539
37.2	A chronology plot depicting a patient’s medication intake from a Medication Event Monitoring System	548
41.1	A model of the habit formation process	601
41.2	Four forms of “habit disruption”	601
41.3	A decision tree to aid selection of habit change strategies (Gardner, 2019)	603
41.4	The habit growth curve	610
43.1	Continuum of dyadic behavior change techniques	633
44.1	The social identity model of behavior change	652
45.1	Theoretical conceptualization of how motivational interviewing (MI) works based on Miller and Rose (2009)	665
46.1	A basic model of a behavior change mechanism of action	689

Tables

2.1	Main effects of theory of planned behavior interventions (from Steinmetz et al., 2016)	<i>page 27</i>
3.1	Social cognitive theory behavior change techniques	41
4.1	Summary of prospective relations between constructs specified by the health belief model and protection motivation theory and behavior	52
5.1	Translation of common-sense model constructs into techniques and intervention components for promoting physical activity and a healthy diet to lose weight	65
7.1	Health action process approach (HAPA) constructs according to phases of behavior change	90
10.1	Stage of change: example client and provider tasks for behavior change intervention	138
10.2	Defining and recognizing client processes of change	139
10.3	Therapist activities to promote experiential and behavioral processes of change	143
10.4	Therapist inventory of intervention strategies	143
11.1	Overview of some intervention approaches mapped onto components of integrative self-control theory	155
17.1	Examples of ecological models that have been developed and used in predicting and changing behavior	239
17.2	Pairings of ecological models and theories	242
17.3	Strategies and constructs targeted by the H2GO! intervention adapted from Wang et al. (2016)	243
17.4	Example intervention targets and strategies across the domains of the ecological model	245
18.1	Summary of major environmental-level theories including key readings and examples and methods for change	254
19.1	Ten tasks involved in the design, development, implementation, and evaluation of behavior change interventions	270
21.1	Intervention development tasks mapped onto phases and steps of two influential frameworks and two reviews of frameworks	302
22.1	Examples of experimental and quasi-experimental evaluation designs	321
22.2	Issues to consider when evaluating a behavior change intervention	326
23.1	Implementation strategies, involved actors, and implementation characteristics targeted by the strategies (Leeman et al., 2017)	339
24.1	Stakeholder engagement and key learning points while developing myHT, an app-based intervention to promote adherence to hormonal therapy in breast cancer survivors	354
24.2	Patient and health care professional stakeholder views of screening for depression in acute care settings and suggested actions to increase its implementation	357

	List of Tables	xiii
27.1	Steps to developing an evidence-based tobacco cessation intervention for African American adults	395
30.1	Key qualitative approaches for research	432
31.1	Example techniques for changing attitudes from the behavior change technique taxonomy v1 (Michie et al., 2013) and related descriptions	449
32.1	Techniques to prompt mastery experiences matched with techniques from behavior change taxonomies	464
32.2	Techniques to prompt vicarious experiences matched with techniques from behavior change taxonomies	465
32.3	Techniques to prompt verbal persuasion matched with techniques from behavior change taxonomies	466
32.4	Techniques to prompt somatic and affective states matched with techniques from behavior change taxonomies	467
33.1	Mental imagery techniques matched with techniques from behavior change taxonomies with related techniques and descriptions	485
34.1	Affective intervention techniques matched with techniques from behavior change taxonomies with related techniques and descriptions	498
34.2	Examples of simple messages used to change affective attitudes	500
35.1	Autonomy supportive intervention program (ASIP)-enabled changes in students' adaptive and maladaptive behavior	515
37.1	How behavior change taxonomies incorporate self-monitoring techniques, along with related techniques and descriptions	541
37.2	Steps and considerations for using monitoring to promote changes in behavior	544
38.1	Use of goal setting in everyday life	556
38.2	Behavior change techniques related to goal setting from existing taxonomies	557
38.3	The dos, don'ts, and personal preferences for goal setting interventions	567
39.1	Planning concepts and their relationship with intervention taxonomies	574
41.1	Techniques for changing habits from the behavior change technique taxonomy v1 (BCTTv1; Michie et al., 2013) with related techniques and descriptions.	605
42.1	Mapping nudge approaches to cognitive biases	623
43.1	Examples of dyadic behavior change techniques along the continuum of dyadic behavior change techniques displayed in Figure 43.1	634
44.1	Six hypotheses from the social identity approach to health (Haslam et al., 2018) that can make group-based interventions a powerful resource for behavior change	651
44.2	Techniques to promote shared social identity	655
44.3	Techniques from Michie et al.'s (2013) behavior change technique taxonomy version 1 interpreted through a group-based behavior change lens	657
45.1	The four interrelated components of motivational interviewing (MI) "spirit" (after Miller & Rollnick, 2013)	662
45.2	Examples of motivational interviewing (MI) techniques matched with techniques from behavior change taxonomies with related techniques and descriptions and MI coding schemes	668
45.3	Categories of in-session client change talk	671
46.1	Themes emerging from the handbook with source chapters and further reading, key concepts, and a summary of the significance of each theme for behavior change	678

Sidebars

2.1	Testing the measurement model of the theory of planned behavior	<i>page</i> 24
2.2	Testing the structural model of the theory of planned behavior	25
3.1	Specific versions of social cognitive theory	37
4.1	Protection motivation in an occupational setting	50
4.2	Protection motivation in advertising to promote purchasing behavior	50
5.1	Need help with asthma control? There’s a common-sense model app for that!	69
6.1	How to induce deliberative and implemental mindsets	81
6.2	Experimenting with implementation intentions	82
6.3	Strong tests of the behavioral impact of implementation intentions	84
7.1	A health action process approach intervention in oral health	97
7.2	Using the health action process approach (HAPA) and technology to change behavior	99
8.1	Williams et al.’s (1998) test of a process model of autonomy support, autonomous motivation, and medication adherence	109
8.2	Chatzisarantis and Hagger’s (2009) process evaluation of an autonomy-support intervention	114
9.1	A history lesson: What happened to Powers’s control theory?	121
9.2	Control theory: The behavioral illusion and testing the controlled variable	129
10.1	Using a readiness ruler to assess motivation and stage of change status	138
11.1	Origins of self-control research	151
11.2	Desires and goals in integrative self-control theory	152
11.3	Enactment constraints in integrative self-control theory	153
12.1	Key terms and concepts of the reflective-impulsive model	165
13.1	Habits cause “behavioral slips”	182
13.2	The measurement of habit strength	183
13.3	A field experiment testing the habit discontinuity hypothesis	186
13.4	Using the self-report habit index to measure cue-contingent habit strength	188
15.1	What is an integrated theory?	209
16.1	Brief definitions of theoretical terms used in social identity approaches	227
16.2	Self-definition varies with shifts from personal to social identity	228
16.3	The importance of social norms and social identification	231
17.1	Examples of research on the correlates of behavior using an ecological framework	242
17.2	Example of how the ecological model is paired with social cognitive theory	243
17.3	Examples of interventions that have used an ecological framework	245
18.1	Case study: Planned change at the organizational level – promoting a fuel-saving driving style among van drivers delivering mail	258

	List of Sidebars	xv
18.2	Case study: Planned change at the societal level – Greenpeace activists recruit powerful allies	259
18.3	Case study: Planned change at the organizational level – influenza vaccination	260
20.1	Connecting principles and practice: the case of vaccination behavior	286
20.2	Resources for making informed decisions about constructs and measures	293
21.1	Recording and reporting the intervention development process	308
22.1	Case study: Personalizing behavioral interventions through single-patient (N-of-1) trials (Davidson et al., 2014)	323
22.2	How do individuals’ health behaviors respond to an increase in the supply of health care? Evidence from a natural experiment (Fichera, Gray, & Sutton, 2016)	325
22.3	Summary of key points for choosing evaluation outcomes	327
23.1	Key constructs used in implementation science	334
23.2	The monitoring and evaluation of implementation of behavior change interventions according to taxonomies of best practices	344
23.3	An example of the questionnaire to measure behavior change intervention adoption	345
24.1	Using stakeholders to guide the development of the myHT app to support adherence to hormone therapy in breast cancer survivors	354
25.1	Developing guiding principles for an intervention for cancer survivors	363
25.2	Illustration of using nonjudgmental language	365
25.3	Using think-aloud methods to optimize an activity planner	367
26.1	The increase of health care expenditure and the application of economic evaluation	376
27.1	PROGESS-Plus: a framework addressing heterogeneity in socioeconomic status measures	388
27.2	Health behaviors as causal links between inequity and health	390
27.3	Developing culturally specific behavior change interventions	395
28.1	New settings affect communities: community gardens as an example	406
28.2	Effects of client choice in food pantries	407
28.3	Spotlight on policy: the COMMIT study	409
28.4	Spotlight on policy: How can community members be engaged in the policy formation process?	410
29.1	Types of digital resources and tools for behavior change	417
29.2	Example of a standalone digital behavior change tool: The Fitz app	418
29.3	Participatory codesign and development	421
29.4	Sample digital behavior change intervention study	422
29.5	Challenges in assessing the efficacy of digital interventions	423
30.1	Case study of behavior change in the workplace using a social practice perspective (Hargreaves, 2011)	437
32.1	The “This Girl Can” campaign	465
32.2	Can reading fluency and self-efficacy of reading fluency be enhanced with an intervention targeting the sources of self-efficacy? (Aro et al., 2018)	471
32.3	Intervention on sources of self-efficacy for breastfeeding (Nichols et al., 2009)	471
33.1	Behavior change techniques relating to mental imagery from existing taxonomies	485

xvi	List of Sidebars	
33.2	Defining and measuring imagery “ability”	488
34.1	Behavior change technique(s) from existing taxonomies	498
34.2	Evaluative conditioning	499
34.3	Gamification and exergames	503
35.1	A behavior change technique taxonomy for teachers’ behavior change	514
35.2	Refining the autonomy-support intervention program (ASIP)	519
36.1	Incentives to exercise	526
36.2	Switching costs and market power	532
37.1	Behavior change technique(s) related to monitoring from existing taxonomies	541
37.2	Self-monitoring in the Adherence Improving self-Management Strategy (AIMS)	548
38.1	Goal setting behavior change technique(s) from existing taxonomies	557
39.1	Approaches to planning	575
40.1	Meta-analytic evidence on self-control training	591
40.2	Example of a self-control intervention protocol	592
41.1	Integrating habit-based techniques into the behavior change technique taxonomy version 1 (BCTTv1)	604
41.2	Discontinuing habitual car use	609
41.3	How are habits formed?	610
41.4	Developing healthy child-feeding habits	612
42.1	Heuristics or characteristics that cause decisions to deviate from expected utility theory	624
42.2	Example of a nudge	626
43.1	Dyadic behavior change techniques and relations with existing taxonomies	634
44.1	Building social identity interventions	655
45.1	The motivational interviewing (MI) “spirit”	662
45.2	Empirical evidence for the theoretical conceptualization of motivational interviewing (MI)	664
