

## Contents

<i>Preface</i>	page xiii
<i>Overview of This Book</i>	xiv
<i>Acknowledgements</i>	xviii
<b>1 Introduction</b>	<b>1</b>
1.1 A Brief History of Forces	2
1.2 The Standard Model of Particle Physics	3
1.3 The Large Hadron Collider	5
1.4 Units of Particle Physics and Dimensional Analysis	8
Exercises	10
<b>2 Special Relativity</b>	<b>15</b>
2.1 Symmetries and Their Consequences	15
2.1.1 Rotational Invariance	17
2.1.2 Relativistic Invariance	19
2.1.3 Applying Relativity	22
2.2 Relativistic Wave Equations	25
2.2.1 The Klein–Gordon Equation	26
2.2.2 The Dirac Equation	32
2.2.3 Electromagnetism	37
Exercises	44
<b>3 A Little Group Theory</b>	<b>51</b>
3.1 Groups as Symmetries	51
3.2 The Rotation Group	54
3.2.1 Two-Dimensional Rotations: $SO(2)$	55
3.2.2 Three-Dimensional Rotations: $SO(3)$	57
3.2.3 $SO(3)$ , $SU(2)$ , and Spin	60
3.3 Isospin and the Quark Model	63
3.3.1 Isospin	64
3.3.2 What is a “Particle”?	68
3.3.3 The Quark Model	70
3.4 Why the Photon Has Two Polarizations	72
Exercises	75

<b>4 Fermi's Golden Rule and Feynman Diagrams</b>	79
4.1 Invitation: The Barn	80
4.2 Scattering Systematics	81
4.2.1 The Scattering Cross Section	85
4.2.2 Fermi's Golden Rule	88
4.3 Feynman Diagrams	92
4.3.1 Diagrams in Physics: Circuits	93
4.3.2 Diagrams in Physics: Electron–Muon Scattering	95
4.3.3 Feynman Diagrams: Summary	100
4.3.4 Feynman Diagrams: Caveat Emptor	101
Exercises	102
<b>5 Particle Collider Experiment</b>	111
5.1 Before Collision: Particle Acceleration	111
5.2 At Collision: Particle Detection	115
5.3 Detector Coordinates	117
5.4 Detector Components	119
5.4.1 Tracking System	120
5.4.2 Calorimetry	122
5.4.3 Muon System	123
5.4.4 Unobservable Neutrinos	124
5.5 After Collision: Triggering and Data Acquisition	127
5.6 Statistical Analyses	128
5.6.1 Statistical Uncertainties	129
5.6.2 Derivation of Poisson Distribution	131
5.6.3 Significance and Discovery	133
Exercises	134
<b>6 Quantum Electrodynamics in <math>e^+e^-</math> Collisions</b>	144
6.1 $e^+e^- \rightarrow \mu^+\mu^-$	144
6.1.1 Solutions to the Massless Dirac Equation	145
6.1.2 Helicity Configurations	147
6.1.3 Calculating the Cross Section	152
6.1.4 Inclusive Cross Sections	154
6.1.5 Exclusive Cross Sections	155
6.2 $e^+e^- \rightarrow$ Hadrons	157
6.2.1 Inclusive Hadronic Cross Sections	157
6.2.2 Properties of the Inclusive Cross Section: Color	158
6.2.3 Properties of the Inclusive Cross Section: Spin	161
Exercises	163
<b>7 Quarks and Gluons</b>	170
7.1 Crossing Symmetry	170
7.1.1 Electron–Quark Scattering	173

7.2	Deeply Inelastic Scattering	175
7.2.1	Physical Interpretation of Bjorken Scaling	180
7.3	Three-Jet Events	188
7.3.1	The Glue That Binds the Proton	189
7.3.2	External Gluon Wavefunction	190
7.3.3	Fermion Propagator	192
7.3.4	The Cross Section for $e^+e^- \rightarrow q\bar{q}g$	193
7.3.5	Tests of a Spin-1 Gluon	197
7.4	Spinor Helicity	204
	Exercises	205
<b>8</b>	<b>Quantum Chromodynamics</b>	<b>213</b>
8.1	Color Symmetry	213
8.2	Non-Abelian Gauge Theory	217
8.2.1	Covariant Derivative	218
8.2.2	Connections and Curvature	220
8.3	Consequences of Quantum Chromodynamics	225
8.3.1	Masslessness of the Gluon	225
8.3.2	Gluon Degrees of Freedom	226
8.3.3	Self-Interaction of the Gluon	226
8.3.4	The Running Coupling and Asymptotic Freedom	229
8.3.5	Low-Energy QCD	236
	Exercises	239
<b>9</b>	<b>Parton Evolution and Jets</b>	<b>246</b>
9.1	Scale Transformations	246
9.1.1	Scale Invariance of QCD	250
9.1.2	Fractals and Scale Invariance	252
9.2	Parton Evolution	253
9.2.1	Collinear Divergences in QCD	253
9.2.2	Energy Dependence of Parton Distributions	256
9.2.3	Physical Interpretation of the DGLAP Equations	259
9.3	Jets	262
9.3.1	All-Orders Predictions: Thrust	264
	Exercises	270
<b>10</b>	<b>Parity Violation</b>	<b>279</b>
10.1	Decay of the Neutron	279
10.2	Discrete Lorentz Transformations	281
10.2.1	Parity Transformations	281
10.2.2	Time Reversal and Charge Conjugation	285
10.2.3	CPT Theorem	287
10.3	Parity Violation in Nuclear Decays	288
10.3.1	Consequences of Parity Violation	291

10.4	The $V - A$ Theory	292
10.4.1	Decay of the Muon	293
	Exercises	300
<b>11</b>	<b>The Mass Scales of the Weak Force</b>	<b>309</b>
11.1	Problems with the $V - A$ Theory	309
11.2	Spontaneous Symmetry Breaking	311
11.2.1	Quantum Mechanics Analogy	311
11.2.2	Goldstone's Theorem for the Mexican Hat Potential	316
11.2.3	Higgs Mechanism in Superconductivity	317
11.3	Electroweak Unification	320
11.3.1	Properties of the Weak Force Carriers	320
11.3.2	Spontaneous Breaking of Electroweak Symmetry	324
11.3.3	The Broken Weak Theory	327
11.3.4	Four Predictions of the Broken Weak Theory	330
	Exercises	343
<b>12</b>	<b>Consequences of Weak Interactions</b>	<b>349</b>
12.1	Flavor Mixing in the Weak Interactions	350
12.2	The Weak Interactions in the Quark Sector: CP Violation	352
12.2.1	Weak Interactions of Charged Leptons	352
12.2.2	Weak Interactions of Quarks	357
12.2.3	CP Violation of the Weak Interactions	361
12.2.4	Fermion Masses in the Standard Model and Tests of Unitarity	368
12.2.5	CP Violation and the Early Universe: Sakharov Conditions	370
12.3	The Weak Interactions in the Lepton Sector: Neutrino Mixing	372
12.3.1	Neutrino Oscillations	373
12.3.2	Neutrino Oscillation Measurement	383
12.3.3	Neutrino Astrophysics	385
	Exercises	387
<b>13</b>	<b>The Higgs Boson</b>	<b>393</b>
13.1	Searching for the Higgs Boson at LEP	394
13.1.1	$e^+e^- \rightarrow Z$	395
13.1.2	$e^+e^- \rightarrow H$	399
13.1.3	$e^+e^- \rightarrow ZH$	401
13.2	Searching for the Higgs Boson at Tevatron and LHC	406
13.2.1	$pp \rightarrow H$	407
13.2.2	$pp \rightarrow H \rightarrow W^+W^-$	413
13.2.3	The Golden Channels: $pp \rightarrow H \rightarrow \gamma\gamma$ and $pp \rightarrow H \rightarrow 4\ell$	415
13.3	Properties of the Higgs Boson	422
13.3.1	Scalar Potential Coupling $\lambda$	422

---

13.3.2 Coupling Strength Proportional to Mass	423
13.3.3 Spin-0	424
Exercises	427
<b>14 Particle Physics at the Frontier</b>	<b>433</b>
14.1 Neutrino Masses	433
14.2 Dark Matter	436
14.3 Higgs Self-Coupling	437
14.4 End of Feynman Diagrams?	439
14.4.1 Failure of Convergence of Feynman Diagrams	439
14.4.2 More Efficient Computational Techniques	442
14.5 The Future of Collider Physics	444
14.5.1 International Linear Collider (ILC)	444
14.5.2 Circular Electron Positron Collider (CEPC)	445
14.5.3 Future Circular Collider (FCC)	445
Exercises	447
<b>Appendix A Useful Identities</b>	<b>449</b>
<b>Appendix B Review of Quantum Mechanics</b>	<b>454</b>
<b>Appendix C Particle Physics Jargon Glossary</b>	<b>461</b>
<i>Bibliography</i>	466
<i>Index</i>	482
