acceleration vector, 111, 113
ambient temperature, 291
assembly, xiii
beams, 88, 120
heat conduction, 288
mass matrix, 119
slender body, 12, 14, 28
truss, 49
assumed displacement, xiii, see elements
along element boundary, 190
and mapping functions, 217
and shape functions, 194
isoparametric formulation, 37
assumed strain formulation, 279
assumed temperature, 293, 303, 307
axial force
2D frame element, 97
3D frame element, 103
truss, 43
backward substitution, 338
balanced polynomial, 187, 191
beams
assumed displacement, 78
assumed displacement, alternate form, 84
axial strain, 71
Bernoulli–Euler, xiii, 69, 71, 250
cantilevered, 69
curvature, 71
kinematics, 71
moment curvature relation, 72
moments, 71
rotation, 71
Timoshenko, 69, 250, 268–269
under axial force, 138
bifurcation, see buckling load
bilinear polynomial, 186, 188–189
body force, 166, 228, 323
boundary condition, 4, 60, 166
elastic foundation, 91
elastic support, 90
force, 16, 166
torque, 60
green strain, 16, 58, 166, 275
inclined support, 58
nonzero, 62, 64
torsion, 60
thermal, 285
buckling, 138, 141, 143, 242
capacitance matrix, 283, 297
2D element, 307
3D element, 313
two-node element, 297
central difference scheme, see numerical integration in time
chain rule, 218, 233, 303, 310
classical plate bending theory, 248
coefficient of thermal expansion, 42, 52, 54, 67, 330
conduction
steady state, xiv, 283
1D, 285
3D domain, 301
time-dependent, 283
1D domain, 296
conduction matrix, 283
2D element, 306
3D element, 311
two-node element, 287
conjugate gradient, see iterative solver
connectivity matrix, 10
connectivity vector, 10
constant strain state, 194
constitutive equations, 317, 326
convection, 283
2D boundary, 307
3D boundary, 312
boundary, 291
coefficient, 292
damping matrix, 111, 125
beams, 135
beams, alternate formulation, 135
degree of freedom, 1
1D heat conduction element, 286
1D slender body, 24
3D truss member, 43
3D truss, 78
frame element, 97
frame element, 3D, 102
plate element, 255
quadrilateral element, 224
shell element, 257
triangular element, 221
diagonal matrix, 337
direction cosines, 44, 58, 99, 332, 335
matrix, 106
divergence theorem, 165–167, 301
DOF, see degree of freedom
effective stiffness matrix
bending under axial force, 148
follower force, 159
eigenvalue analysis, xiii, 111, 118, 138, 143, 160, 242, 278
eigenvalues, see eigenvalue analysis
eigenvector, see eigenvalue analysis
elastic compliance coefficients, 249, 327
elastic stiffness coefficients, 327
element coordinates, 43, 186
element stress, 231
elements, 2
1D heat transfer, 286
20-node hexahedron, 197
matrix form, plane stress and strain, 231
moments, bending under axial force, 140
moments, continuum solid, 324
plane stress and strain, 216
plates and shells, 254
system of linear springs, 11
torsion, 59
virtual work, 75
follower force, 138, 158–160
forward substitution, 338
Fourier’s law, 284, 301
free body, 323–324
axial force, 15
beam, 72
bending under axial force, 138
torque, 60
free vibration, xi, 111, 117, 151, 242
Galerkin method, 3
Gaussian elimination, xiv, 242, 337
Gaussian quadrature, see numerical integration
generalized coordinates, 178
heat energy balance, 300
heat flux, 284, 291, 301, 307, 312
heat source per length, 284
higher-order elements, 37, 190
hour glass modes, 278
implicit method, 127
incompressibility locking, 266, 275
increment in internal energy, see incremental strain energy
incremental displacement, 20, 171
incremental strain energy, 6–8
beams, 77, 79
slender body, 20
slender body element, 132
thermal strain, 171
incremental work done, 6
axial follower force, 158
beams, 76
beams, vibration, 115
slender body, 20
slender body vibration, 112
slender body, torsion, 61
spring element, 9
inertia force, 111, 177, 238
axial, 112
beam vibration, 115
torque, 114
infinitesimal volume, 76, 178, 283, 334
initial acceleration vector
central difference, 129
trapezoidal rule, 126
initial conditions, 114, 117, 125, 240
instability
dynamic, 138, 160
kinematic, 266, 277
integration by parts, 18, 76, 141, 181, 285
integration point, see sampling point
interpolation function, 186
isoparametric formulation, xiii, 37, 184, 255
1D element, 186
2D element, 217
plate element, 255
isotropic, 317, 328
3D solid, 275
plane stress, 175
plane strain, 173
plates, 252
plates and shells using 3D element, 259
thermal strain, 330
iterative solver, 242
Jacobian matrix, 218, 304, 310
2D domain, 201
3D domain, 234
kinetic energy, 130, 179
beam element, 134
slender body element, 131
slender body element, torsion, 133
slender body vibration, 133
slender body, axial, 131
solid element, 241
Lagrange equation, 111, 130–131, 165, 177, 179
Lanczos method, 240, 242
load vector, 3
1D heat conduction, 287
3D thermal strain, 236
beams, 81
beams, alternate form, 85

20-node rectangular element, 281
2D heat transfer, 303
eight-node hexahedron, 195
eight-node planar element, 192
four-node quadrilateral, 186
four-node rectangular Reissner–Mindlin plate bending element, 272
nine-node planar element, 190
six-node triangle, 194
three-node 1D element, 41
two-node 1D element, 113
two-node element, 8, 255
two-node Timoshenko beam element, 268
beam element, 78
beam element, alternate form, 84
brick, 195
frame, 97
hexahedral, 195
hexahedral, higher order, 197
higher-order elements, 37
plate element, 255
quadrilateral element, 186
quadrilateral, higher-order, 190
shell element, 257
slender body, 23
tetrahedral, 198
triangular, 193
triangular, higher-order, 194
trus, 43
equation of motion, xiii, 111, 126, 240
bending under axial force, 150
damping, 135
Lagrange equation, 177
equilibrium
beam element, 82
bending forces, 72
bending moments, 73
bending under axial force, 138
deformable solids, 165
forces, continuum solid, 323
frame element, 98, 102
inclined support, 59
inertia force, 2D and 3D solids, 238
linear spring, 5, 27
matrix form, bending under axial force, 143
matrix form, linear spring, 9
load vector (cont.)
body force, hexahedral element, 236
body force, quadrilateral element, 228
boundary convection, 292, 307
boundary flux, 307, 312
frames, 3D global coordinates, 105, 107
heat source, 306, 312
slender body, 26
slender body, torsion, 61
surface force, hexahedral element, 236
surface force, quadrilateral element, 229
thermal strain 3D truss member, 55
thermal strain slender body, 53
thermal strain, quadrilateral element, 227
local coordinate, 186
frame, 97, 102
shell, 256–257
stiffness matrix, frame element, 104
lower-order integration, xiv, 266, 271
lower triangular matrix, 337
mapped domain, xiii, 184, 198
mapped plane, 184
four-node quadrilateral, 187
three-node triangle, 193, 219
mapping function, xiii, 37, 184, see elements
mass matrix, xiii, 111, 132, 297
2D and 3D solid, 239
beam element, 116
beam element, alternate formulation, 116
consistent, 240
consistent, two-node element, 241
diagonal, see lumped mass matrix
heat transfer, 297, see capacitance matrix
lumped, 240
lumped, two-node element, 241
two-node element, 113
two-node element, torsion, 115
mathematical equivalence, xiii, 42, 60, 111, 115, 133, 283
matrix bandwidth, 337, 340
membrane locking, 266, 273, 275
mesh generation, 216, 242
midside node, 190, 192, 197
moment of inertia
area, 72, 95
mass, 114
natural coordinates, 186, 303
natural frequency, 111, 151, see eigenvalue analysis
natural mode, 111, 151, see eigenvalue analysis
normal stress, 323
numerical integration, xiii
1D domain, 204
element locking, 269
hexahedron, 208
quadrilateral, 208
tetrahedron, 212
triangle, 210
numerical integration in time
central difference scheme, 128, 240
trapezoidal rule, 125, 297
orthotropic, 260, 317, 327–328
thermal strain, 330
parent coordinates, 186
plane strain, 165, 175, 216, 276
plane stress, 165, 172, 174, 216
plates
assumed displacements, 255
kinematics, 249, 253
Kirchhoff, 253–255
Reissner–Mindlin, 252, 255, 272
strain–stress relationship, 252
positive definite, 242
potential energy, see strain energy
principle of virtual work, 6, 166
reaction force, 7, 9, 19, 27, 29, 76, 82, 112
reaction moment, see reaction force
reduced-order integration, see lower-order integration
rigid-body modes, 271, 278
rigid-body rotation, 278, 317, 319, 321
rigid-body translation, 34, 37, 188, 278
Runge–Kutta, fourth-order RK4, 298
sampling point, 204, 236
1D domain, 205
tetrahedron, 212
triangle, 211
SDOF, see degree of freedom
shape function, xiii, 184
3D element, 195
beam element, 78
higher order, 190
