Preface	page xi		
Acknowledgments	xiv		
1 The Grand Canyon: Reading the Rocks	1	3 The Origin of Earth: From the Beginning of the Universe to the Early Earth	49
Learning Objectives	1	Learning Objectives	49
Introduction	1	Introduction	49
1.1 The Grand Canyon: Overview	3	3.1 The Big Bang	49
1.1.1 Age of the Grand Canyon	3	3.2 Stars and the Formation of the Elements	51
1.2 The Basement: Metamorphic and Igneous Rocks	6	3.3 Forming Our Solar System	53
1.2.1 Metamorphic Rocks (Granite Gorge Metamorphic Suite)	6	3.4 Formation of the Earth–Moon System	55
1.2.2 Igneous Rocks: The Zoroaster Plutonic Complex	8	3.5 Early Earth Evolution	57
1.3 Sedimentary Rocks in the Grand Canyon and Principles of Stratigraphy	12	3.5.1 Thermal Evolution	57
1.3.1 Naming Layers	12	3.5.2 Earth Structure	58
1.3.2 Steno’s Laws	12	3.5.3 Core Formation	60
1.3.3 Unconformities	15	3.5.4 Crustal Growth	60
1.3.4 Fossils	18	3.5.5 Isostasy and Topography	60
1.3.5 Environments and Sea Level	20	3.5.6 Early Atmosphere	62
1.4 Deformation	25	3.5.7 Evolution of the Oceans	62
1.5 Historical Summary of the Grand Canyon	27	3.6 Summary	64
Key Words	29	Key Words	64
Further Reading and References	29	Further Reading and References	64
Review Questions	30	Review Questions	64
2 The Philosophies of Geology: Assumptions Steer Interpretations	33	4 The Age of Earth: Historical Versus Modern Dating Approaches	67
Learning Objectives	33	Learning Objectives	67
Introduction	33	Introduction	67
2.1 The Meaning of Fossils	33	4.1 Historical Approaches to Estimating the Age of Earth	68
2.2 Catastrophism	35	4.1.1 Religion-Based Approaches	68
2.3 Neptunism	38	4.1.2 Approaches Considering Observation and Modeling of the Natural World	69
2.4 Plutonism	39	4.1.3 Problems with Historical Methods	70
2.5 Uniformitarianism	40	4.2 Radioactivity and Geochronology	72
2.6 Uniformitarianism vs. Actualism: Channeled Scablands	42	4.2.1 Discovery of Radioactivity and Kelvin’s Dilemma	72
2.7 The Scientific Method and Geology’s Place in It	44	4.2.2 Basics of Radioactivity	73
2.7.1 Observation, Hypothesis, Test	44	4.3 Requirements of Radioisotope Dating	75
2.7.2 The Problem of Geologic Experiments	45	4.3.1 Knowing the Rate of Radioactive Decay	75
2.8 Summary	46	4.3.2 Knowing How Many Daughters Were Present at the Beginning	75
Key Words	47	4.4 Geochronology of the Oldest Rocks	77
Further Reading and References	47	4.4.1 The First Attempts at Isotopic Dating	77
Review Questions	47	4.4.2 The Problems of Geochronology of Older Rocks	78
		4.4.3 The Oldest Terrestrial Evidence	79
		4.4.4 Extraterrestrial Evidence	80
		4.5 Conclusion	81

4.6 Summary	81	6.3 Models of Evolutionary Change	126
Key Words	82	6.3.1 Natural Selection in Action	126
Further Reading and References	82	6.3.2 Extinction and Speciation	127
Review Questions	82	6.3.3 Genes are the Agent of Evolution	129
5 Plate Tectonics: Our Unifying Geological Concept	85	6.4 Limiting Factors	129
Learning Objectives	85	6.5 What Darwin Didn't Know	130
Introduction: Up and Down or Side to Side?	85	6.6 Summary	130
5.1 Continental Drift: Alfred Wegener and his Big Idea	86	Key Words	131
5.1.1 Reassembling a Supercontinent: The Fit of the Puzzle	87	Further Reading and References	131
5.1.2 Early Ideas of Mechanisms for Continental Drift	89	Review Questions	131
5.1.3 Paleomagnetism Confirms Seafloor Spreading	89	7 The Origin of Life: Our Early Atmosphere and the Rise of Early Life	133
5.1.4 Subduction: Where Oceans are Destroyed – The Independent Observations of Wadati and Benioff	96	Learning Objectives	133
5.2 Plate Tectonics	97	Introduction	134
5.2.1 Control of Earth Structure on Plate Tectonic Mechanisms	97	7.1 Darwin's Idea: A Warm Little Pond	134
5.2.2 Plate Boundaries, Plate Motion	100	7.2 When Was the Earth Habitable?	135
5.2.3 Hot Spots	104	7.3 Evidence for the Oldest Life	135
5.2.4 Tectonics, Sedimentation, and the Rock Cycle	104	7.4 Assembling the First Cell: Theory and Experiments	136
5.2.5 Super-Volcanoes and Other Plate Tectonic Hazards	105	7.4.1 Heterotrophic Theory for the Origin of Life	137
5.2.6 When did Plate Tectonics Begin?	106	7.4.2 Experiments on the Origin of Life	139
5.3 Summary	109	7.4.3 Protocells and the Shallow Water Hypothesis	140
Key Words	110	7.5 Deep Water Hydrothermal Vents Versus Shallow Pond Hypotheses	140
Further Reading and References	110	7.5.1 Hydrothermal Deep Water Life	141
Review Questions	110	7.5.2 Hydrothermal Vent Versus Shallow Hydrothermal Field Hypotheses	142
6 Evolution: Natural Selection and the Organization of Life	113	7.6 From the Top Down: The RNA World	142
Learning Objectives	113	7.7 Origin of Photosynthesis	142
Introduction: The Observation of Evolution	113	7.8 From Prokaryotes to Eukaryotes	143
6.1 Darwinian Versus Lamarckian Ideas of Evolution	114	7.8.1 Evolutionary History of Eukaryotes	143
6.2 Evidence of our Shared Ancestry	115	7.8.2 Fossil Record of Early Eukaryotes	145
6.2.1 Homology and Analogy	116	7.9 Evolution of Earth's Atmosphere and the Great Oxygenation Event	145
6.2.2 Clades	117	7.10 Summary	147
6.2.3 Organization of Life and Genetic Homology	121	Key Words	147
6.2.4 Molecular Clocks	122	Further Reading and References	148
6.2.5 Imperfect Adaptations	122	Review Questions	148
6.2.6 Vestigial Structures	123	8 Snowball Earth: A Neoproterozoic Frozen Planet	151
6.2.7 Vestigial Genes	124	Learning Objectives	151
6.2.8 What Use is Half an Eye?	125	Introduction	152
		8.1 Did the Earth Ever Freeze?	152
		8.2 Earth Freezes Over	155
		8.2.1 Evidence for Glaciers at the Equator	157
		8.2.2 Causes of Global Cooling	157

8.3	Out of the Deep Freeze	161	10.2	Iapetus: An Early Ocean	194
8.3.1	Volcanoes Change the Balance	161	10.2.1	Geology of “The Rock” (Newfoundland) and the Discovery of Iapetus	195
8.3.2	Cap Carbonates	162	10.2.2	Ophiolites: Remnants of Oceanic Lithosphere	198
8.4	How Many Glacial Episodes Were There?	164	10.3	The Assembly of Pangea	200
8.5	Implications for Life on Earth	164	10.3.1	Suspect Terranes	201
8.6	Why Hasn’t There Been Another Snowball?	165	10.3.2	Orogenic Episodes and Zipper Tectonics	202
8.7	Summary	165	10.4	The Stratigraphic Expression of Orogeny	204
	Key Words	166	10.5	Conclusion	207
	Further Reading and References	166	10.6	Summary	207
	Review Questions	166		Key Words	207
9	An Explosion of Life: Ediacaran Experimentation, the Cambrian Explosion, and Ordovician Biodiversity	169		Further Reading and References	208
	Learning Objectives	169		Review Questions	208
	Introduction	170	11	Environmental Change in the Late Paleozoic: The Greening of Earth, Climate Change, and the Great Dying	211
9.1	Setting up the Cambrian Explosion: The Sauk Transgression	170		Learning Objectives	211
9.2	When did Metazoans Arise?	170		Introduction	212
9.2.1	Molecular Clocks	170	11.1	Paleozoic Life: Invasion of the Land	212
9.2.2	Observations From Modern Biology	171	11.1.1	Plants Invade the Land	212
9.3	Ediacaran Fauna	173	11.1.2	Evolution of Gigantic Insects and an Oxygen Spike	213
9.3.1	Soft Bodies and Osmotrophs	173	11.1.3	The Earliest Tetrapods: A Fish Out of Water	215
9.3.2	Mobile Feeders: Precursors to Animals	175	11.1.4	The First Amphibians: Filling Romer’s Gap	215
9.3.3	Animals with Hard Parts and Ediacaran Extinctions	176	11.1.5	The First Reptiles: Freed From the Water	218
9.4	The Cambrian Explosion and the Burgess Shale	177	11.2	Late Paleozoic Climate Change: From Icehouse Forests to Hothouse Deserts	220
9.4.1	The Burgess Shale	178	11.3	The Great Dying	223
9.4.2	Burgess Fauna from Weird to Normal	179	11.3.1	The Siberian Traps	224
9.5	The Great Ordovician Biodiversification Event	183	11.3.2	A Selective Extinction	224
9.6	Modes of Biodiversification	184	11.3.3	Geochemical Changes and Duration of the Extinction Event	226
9.6.1	The Sepkoski Curve: Patterns of Diversification and Mass Extinction	185	11.3.4	Effects of the Volcanism	226
9.6.2	Five Mass Extinctions	186	11.4	Other Hypotheses for Causes of the Mass Extinction?	230
9.6.3	The Ordovician Mass Extinction	187	11.5	A Slow Recovery	230
9.7	Evolution and the Fossil Record	187	11.6	Summary	230
9.8	Summary	188		Key Words	231
	Key Words	189		Further Reading and References	231
	Further Reading and References	189		Review Questions	232
	Review Questions	190			
10	Iapetus and Pangea: The Lost Ocean and the Assembly of a Paleozoic Supercontinent	193			
	Learning Objectives	193			
	Introduction: The Search for Old Oceans?	194			
10.1	The Age of the Modern Oceans	194			

12 The Age of Dinosaurs: The Triassic, Jurassic, and Cretaceous World	235	Key Words	272
Learning Objectives	235	Further Reading and References	273
Introduction	236	Review Questions	273
12.1 The Mesozoic	236	14 Tectonics of Western North America: A Dynamic Cretaceous and Cenozoic Landscape	275
12.2 Early Interpretations of Dinosaurs	239	Learning Objectives	275
12.2.1 Reconstructing Dinosaurs from Bones	239	Introduction	276
12.2.2 Evidence of Bipedalism and an Upright Gait	242	14.1 Suspect Terranes	276
12.3 The First Dinosaurs	243	14.1.1 Geochemistry Reveals Crustal Structure	279
12.4 Dinosaur Adaptations and Behavior	244	14.2 Foreland Basin	279
12.5 Were the Dinosaurs Warm-Blooded?	245	14.3 Subduction Angle Controls Tectonics: The Laramide Orogeny	283
12.6 Dinosaur Classification, Are They Really Just Birds?	248	14.4 The Impermanence of Plate Margins	288
12.7 Evolution of Feathers	249	14.4.1 Development of the San Andreas Fault System	289
12.8 Gigantism	250	14.4.2 The Basin and Range Province	290
12.8.1 Homeothermy, Hollow Bones, and Avian Respiratory Systems	250	14.5 Hot Spots and Plate Motions	291
12.8.2 Response to Gigantic Predators	251	14.6 Summary	294
12.8.3 Dinosaurs and Plants	251	Key Words	294
12.9 Dinosaur Diversity	252	Further Reading and References	295
12.10 Mammals in the Shadows	253	Review Questions	295
12.10.1 On Being Small	253	15 The Indo-Asian Collision: The Formation of the Himalaya	297
12.10.2 Mammalian Diversity	253	Learning Objectives	297
12.11 End of an Era	255	Introduction	298
12.12 Summary	255	15.1 Before the Collision	299
Key Words	256	15.1.1 Tibet in the Cretaceous	300
Further Reading and References	256	15.1.2 The Gangdese Batholith	300
Review Questions	256	15.1.3 Ophiolites	302
13 The Cretaceous Extinction: The End of the Age of Dinosaurs	259	15.2 The Collision Begins	302
Learning Objectives	259	15.2.1 Change in Velocity of India	303
Introduction	260	15.2.2 Age of Youngest Marine Sedimentary Rocks	303
13.1 Scales of Natural and Human-Made Disasters versus Mass Extinctions	260	15.2.3 Age of Youngest Subduction-Related Magmatism	304
13.2 Cretaceous Extinction Hypotheses	260	15.3 The Collision Continues	305
13.2.1 Cretaceous Super-Eruptions	260	15.3.1 Continental Escape	305
13.2.2 Extraterrestrial Impact	262	15.3.2 The Collision Continues: The Rise of the Himalaya	306
13.3 The Chicxulub Impact Crater	265	15.4 The Interplay of Tectonics, Erosion, and Climate	314
13.4 Magnitude and Immediate Consequences of the Extraterrestrial Impact	268	15.5 Conclusion	316
13.4.1 Environmental Collapse	269	15.6 Summary	317
13.4.2 A Slow Recovery	270	Key Words	317
13.4.3 Are the Dinosaurs really Extinct?	271	Further Reading and References	317
13.5 The Origin of the Cretaceous–Paleogene (K–Pg) Extinction	271	Review Questions	317
13.6 Conclusion	271		
13.7 Summary	272		

16 The Messinian Crisis: The Great Drying of the Mediterranean Sea	319	18 Ice Ages and Sea Level: Quaternary Environmental Change	355
<i>Learning Objectives</i>	319	<i>Learning Objectives</i>	355
<i>Introduction: The Grandest Canyon</i>	320	<i>Introduction</i>	356
16.1 Evidence of Desiccation from the Deep Sea: Ken Hsu and the <i>Glomar Challenger</i>	321	18.1 From Floods to Ice Ages	356
16.2 Formation of Evaporites from Seawater	324	18.2 Conditions Necessary for Glaciers and Continental Ice Sheets	356
16.3 Stratigraphic Evidence of Mediterranean Evaporation	326	18.2.1 Where Glaciers are Found Today	356
16.4 Evidence of Hypersaline Lakes: The Lago Mare	328	18.2.2 Antarctica and Greenland	358
16.5 Plate Tectonics in 1973 and the Depth of the Mediterranean Sea	328	18.3 Continental Glaciers: The Last Icehouse	358
16.6 Unconformities and Incised Valleys: Further Evidence for a Massive Drop in Sea Level	329	18.4 Geologic Record of Ice Sheets and How They Move	358
16.7 The Salinity Crisis	330	18.5 Glacial Termini, Great Lakes, and Great Floods	360
16.8 Tectonic Cause	333	18.6 Milankovitch Cycles: Orbital Control on Glacial Episodes	361
16.9 Consequences of the Crisis	334	18.7 Oxygen Isotope Evidence of Global Climate Cycles and Changes of Sea Level	361
16.10 Summary	334	18.8 Global Consequences of Continental Glaciation	364
<i>Key Words</i>	335	18.9 Sea Level and Sedimentation	365
<i>Further Reading and References</i>	335	18.9.1 Seismic Stratigraphy and Global Sea-Level Cycles	367
<i>Review Questions</i>	335	18.9.2 Sea Level Throughout Earth History	371
17 Out of Africa: Human Evolution	337	18.9.3 Orders of Sea Level and Their Causes	371
<i>Learning Objectives</i>	337	18.10 Time's Arrow, Time's Cycle	373
<i>Introduction: Where Did Humans First Evolve?</i>	338	18.11 Summary	373
17.1 The "Missing Link" and the Ladder of Progress: A Eurocentric View	338	<i>Key Words</i>	373
17.2 Piltdown Man: An Example of Twentieth-Century Bias in Established Scientific Views on the Origin of Humans	339	<i>Further Reading and References</i>	374
17.3 The Primate Family Tree	340	<i>Review Questions</i>	374
17.4 The First Primates: Life in the Trees	340	19 A Human World: Our Impact in the Holocene	377
17.5 Our Greatest Evolutionary Step (Meet Lucy)	342	<i>Learning Objectives</i>	377
17.6 Important Environmental Changes	344	<i>Introduction</i>	378
17.7 How Smart was Lucy? Evolution of the Brain	345	19.1 The Holocene	378
17.8 Early Humans and the First Tools	346	19.2 Earth's Surface Temperature	379
17.9 Neanderthals vs. Sapiens	347	19.2.1 Earth's Energy Balance	379
17.10 <i>Homo sapiens</i>	348	19.2.2 The Greenhouse Effect	381
17.11 The Naked Ape: Neoteny and Paedomorphosis	348	19.2.3 Atmospheric Composition	381
17.12 Conclusion	350	19.2.4 Greenhouse Gases and Their Effects	381
17.13 Summary	351	19.3 Observations of Change	384
<i>Key Words</i>	351	19.4 Modeling Global Change	386
<i>Further Reading and References</i>	352	19.4.1 Climate Versus Weather	386
<i>Review Questions</i>	352	19.4.2 Numerical Models of Chaotic Systems	386

Contents

19.5	The Sixth Extinction?	389	Further Reading and References	392
19.6	Global Change in a Deep Time Perspective	390	Review Questions	392
19.7	Summary	391	Glossary	393
	Key Words	392	Index	406
