Foreword *page* xi
Nomenclature xiv

1 Fluids and Fluid Mechanics 1
1.1 Fluids: Basic Concepts 1
1.2 Some Properties of Fluids 4
1.2.1 Viscosity of Fluids 5
1.2.2 Surface Tension of Liquids 10
1.2.3 Equation of State for Gases 12
1.2.4 Compressibility of Gases 14
1.2.5 Thermal Conductivity of Gases 15
1.3 The Concept of Continuum 16
1.4 Forces in a Fluid 16
Expanded Knowledge 18
States of Matter 18
Compressibility of Water 18
Compressibility of Solids 19
Questions 19

2 Forces in a Static Fluid 20
2.1 Analysis of Forces in a Static Fluid 20
2.2 Pressure in a Static Fluid under the Action of Gravity 23
2.3 Pressure in a Fluid under the Action of Inertial Forces 27
2.4 Differences and Similarities in the Transfer of Force by Fluids and Solids 29
Expanded Knowledge 31
Atmospheric Pressure 31
Pressure Measurement 32
Questions 33

3 Description of Fluid Motion 34
3.1 Methods of Describing Fluid Motion 34
3.2 Pathlines and Streamlines 35
3.3 Velocity, Acceleration, and Substantial Derivative 37
3.4 Reynolds Transport Theorem 41

Table of Contents
More Information

3.5 Relationship between the Reynolds Transport Theorem and Substantial Derivative 43
3.6 The Incompressibility Hypothesis 45
3.7 Motion and Deformation of a Fluid Element 47
3.7.1 Linear Deformation of a Fluid Element 50
3.7.2 Rotation of a Fluid Element 52
3.7.3 Angular Deformation of a Fluid Element 53
Expanded Knowledge 54
Streaklines and Their Applications 54
Streamline Coordinates 54
Questions 56

4 Basic Equations of Fluid Dynamics 57
4.1 Integral and Differential Approach 57
4.2 Continuity Equation 59
4.2.1 Continuity Equation: Integral Form 59
4.2.2 Conversion from Integral to Differential Equation 61
4.2.3 Differential Equation for an Elemental Control Volume 62
4.3 Momentum Equation 65
4.3.1 Integral Form of the Momentum Equation 65
4.3.2 Differential Momentum Equation 67
4.4 Bernoulli's Equation 74
4.5 Angular Momentum Equation 80
4.5.1 Integral Angular Momentum Equation 80
4.5.2 Differential Angular Momentum Equation 81
4.6 Energy Equation 83
4.6.1 Integral Energy Equation 83
4.6.2 Differential Energy Equation 88
4.6.3 Equations of Enthalpy, Entropy, Total Enthalpy, and Shaft Work 95
4.7 Solution of the Governing Equations 99
4.7.1 Boundary Conditions 99
4.7.2 Some Analytical Solutions of N-S Equations 101
Expanded Knowledge 104
A Comparison between Constitutive Equations for Fluids and Solids 104
Mathematical Properties of N-S Equations 105
Solving Flow Problems 106
Questions 107

5 Inviscid Flow and Potential Flow Method 108
5.1 Characteristics of Inviscid Flow 108
5.2 Inviscid Rotational Flow 109
5.2.1 Vorticity Generated by Viscous Force 113
5.2.2 Vorticity Generation in Baroclinic Flow 114
5.2.3 Vorticity Generation with Nonconservative Body Forces 116

Table of Contents
More Information

5.3 Irrotational Flow and Velocity Potential 117
5.4 Planar Potential Flow 118
5.4.1 Uniform Flow 119
5.4.2 Point Source and Point Sink 119
5.4.3 Point Vortex 120
5.4.4 Dipole 120
5.4.5 Uniform Flow Around a Circular Cylinder 121
5.5 Complex Potential 123
5.5.1 A More Concise Expression 123
5.5.2 Conformal Transformations 124
5.5.3 The Method of Images 125
5.6 Engineering Applications of Potential Flow and Its Current Status 126
Expanded Knowledge 126
Complex Variable Functions and Fluid Mechanics 126
Questions 127

6 Viscous Shear Flow 128
6.1 Shearing Motion and Flow Patterns of Viscous Fluids 128
6.2 Laminar Boundary Layer 131
6.2.1 Prandtl's Boundary Layer Equations for Two-Dimensional Flows 132
6.2.2 Boundary Layer Thickness 136
6.2.3 Integral Approach for Solving Boundary Layer Problems 140
6.3 Turbulent Boundary Layer 145
6.4 Pipe Flow 151
6.4.1 Entrance Region 152
6.4.2 Fully Developed Region 155
6.5 Jets and Wakes 160
6.5.1 Jets 160
6.5.2 Wake 161
6.6 Boundary Layer Separation 163
6.7 Drag and Losses 169
6.7.1 Drag 169
6.7.2 Flow Losses 178
Expanded Knowledge 185
The Theory of Homogeneous Isotropic Turbulence 185
Numerical Computation of Turbulent Flows 187
Turbulent Boundary Layer Separation 189
Questions 189

7 Fundamentals of Compressible Flow 191
7.1 Sound Speed and Mach Number 191
7.1.1 Speed of Sound 192
7.1.2 Mach Number 194
7.2 Steady Isentropic Flow Equations 196

Table of Contents
More Information

7.2.1 Static and Total Parameters 197
7.2.2 Critical State and Coefficient of Velocity 200
7.2.3 Gasdynamic Functions 204
7.3 Expansion Wave, Compression Wave, and Shock Wave 207
7.3.1 Pressure Waves in Fluids 208
7.3.2 Normal Shock Wave 212
7.3.3 Oblique Shock Wave 213
7.4 Isentropic Flow in a Variable Cross-Section Pipe 217
7.4.1 Converging Nozzle 217
7.4.2 Laval Nozzle 222
Expanded Knowledge 226
Aerodynamic Heating 226
Shock Wave–Boundary Layer Interaction 228
Questions 228

8 Similarity and Dimensional Analysis 230
8.1 The Concept of Flow Similarity 230
8.2 Dimensionless Numbers 231
8.2.1 Reynolds Number 232
8.2.2 Mach Number 234
8.2.3 Strouhal Number 236
8.2.4 Froude Number 236
8.2.5 Euler Number 237
8.2.6 Weber Number 238
8.3 Governing Equations in Dimensionless Form 238
8.4 Flow Modeling and Analysis 240
8.4.1 Low-Speed Incompressible Flow 240
8.4.2 High-Speed Compressible Flow 242
8.4.3 A Real-Life Example: A Milk Drop 243
Expanded Knowledge 244
Flows at Extremely Low Reynolds Numbers 244
Questions 245

9 Analysis of Some Flow Phenomena 246
9.1 What Are the Shapes of Objects in Outer Space? Properties of Fluids 246
9.2 Upside-Down Cup of Water: Incompressibility of Liquids 247
9.3 Air Blockage: Compressibility of Gases 251
9.4 How Balloons Create Thrust: Momentum Theorem 252
9.5 Thrust of a Water Rocket: Independent of Working Substance 254
9.6 Turbojet Engine Thrust: On Which Components? 255
9.7 Total Pressure and Its Measurement: Not a Property of Fluids 256
9.8 Why Does a Converging Flow Accelerate? Balance of Basic Laws 260
9.9 Impulsive Force and Stagnation Pressure: Relationship between the Momentum Equation and Bernoulli's Equation 263

Table of Contents
More Information

9.10 Pressure of Jet Flow: A Pressure-Dominated Flow 265
9.11 Faucet Flow Control: Total Pressure Determines Jet Speed 267
9.12 Squeeze the Outlet of a Hose to Increase Velocity: Total Pressure Determines Jet Speed 269
9.13 Suction and Blow: Pressure-Dominated Flows 271
9.14 Wind Near Buildings: Complex Three-Dimensional Unsteady Flow 272
9.15 Coandă Effect: Viscous Effect is Indispensable 275
9.16 Shape of a Raindrop: Surface Tension and Pressure Distribution 277
9.17 Vacuum Effects in Racing Cars Related to Incoming Flow Velocity 280
9.18 Larger in Size, Longer in Range: Scale Effect 280
9.19 Meandering of Rivers: Pressure-Dominated Channel Vortex 283
9.20 Tea Leaves Gather in the Middle of the Cup: Another Channel Vortex 284
9.21 Iron Ox Moves Upstream: Pressure-Dominated Horseshoe Vortex 285
9.22 Pressure Change by a Passing Train: Not Just Bernoulli's Equation 287
9.23 How Lift Is Created: The Coandă Effect is the Key 290
9.24 Principle of Heat Engines: Working Substance Must be Compressible 295
9.25 Principle of Compressors: Work Done by Unsteady Pressure Forces 300
