Introduction	1
<hr/>	
1 Introductory Concepts	6
1.1 A First Definition of Reproduction	7
Box 1.1 Spontaneous Generation	8
Box 1.2 Other Reproductions	12
1.2 Asexual and Sexual Reproduction	13
Box 1.3 Sexual or Asexual?	13
1.3 Generation, Life Cycle, Development	18
1.3.1 Generation	18
1.3.2 Life Cycle	21
1.3.3 Development	24
1.4 Reproduction and Individuality	25
1.4.1 Genetic Uniqueness of the Individual	26
1.4.2 Genetic Uniformity of the Individual	26
1.4.3 Autonomy and Physiological Unity of the Individual	29
1.4.4 How Many Kinds of Individual?	30
1.5 Reproduction and Senescence	32
Box 1.4 Sex and Death	35
1.6 Difficult Boundaries	41
1.6.1 Reproduction vs. Transformation	41
1.6.2 Reproduction vs. Growth	43
1.6.3 Reproduction vs. Regeneration	45
<hr/>	
2 Reproduction and Life Cycle	47
2.1 Alternation of Nuclear Phases	48
Box 2.1 Cell Cycle	53
2.1.1 Isomorphic and Heteromorphic Haplodiplontic Cycles	54
2.1.2 Haplodiplontic Cycles with Homospory and Heterospory	54
2.1.3 Haplodiplontic Cycles and Asexual Reproduction	57
2.2 Alternation of Sexual and Asexual Generations: Metagenetic Cycles	57
Box 2.2 The ‘Immortal Jellyfish’	59

Contents

Box 2.3 Metagenesis vs. Metamorphosis	61
2.3 Alternation of Amphigonic and Parthenogenetic Generations: Heterogonic Cycles	63
2.4 Alternation of Gonochoric and Hermaphrodite Generations: Heterogonic Cycles	66
2.5 Alternation of Solitary and Colonial Generations	67
2.6 Alternation of Unicellular and Multicellular Generations	69
2.7 Alternation of Generations by Seasonal Polyphenism	71
2.8 Cycles with Reproductive Options	73
2.9 Distribution of Reproductive Phases Within One Generation	75
2.10 Generation Times	84
<hr/>	
3 The Natural History of Reproduction	86
3.1 Asexual Reproduction	86
3.1.1 Asexual Reproduction in Unicellular Organisms	87
3.1.1.1 Cell Division in Prokaryotes	87
3.1.1.2 Cell Division in Unicellular Eukaryotes	89
3.1.2 Asexual Reproduction in Multicellular Organisms	90
3.1.2.1 Unicellular Propagules	91
Box 3.1 Spores	92
3.1.2.2 Multicellular Propagules in Plants and Fungi	94
3.1.2.3 Multicellular Propagules in Metazoans	96
3.1.2.4 Polyembryony and Larval Amplification	102
3.2 Sexual Reproduction: Gametes and Syngamy	106
Box 3.2 The Evolutionary Enigma of Sex	107
3.2.1 Isogamety, Anisogamety, Oogamety	111
Box 3.3 How Many Sexes?	112
3.2.2 Gametogamy, Gamontogamy, Autogamy	113
3.2.3 Cryptic Sex	115
3.3 Distribution of Sex Conditions Within a Species or Population	116
3.3.1 Gonochorism (Dioecy)	116
3.3.1.1 Secondary Sexual Characters in Plants	117
3.3.1.2 Secondary Sexual Characters in Animals	118
3.3.2 Hermaphroditism (Monoecy)	122
3.3.2.1 Monoecy in Land Plants	122
3.3.2.2 Hermaphroditism in Metazoans	125
3.3.3 Androdioecy, Gynodioecy and Trioecy	133
3.4 Germ Cells in Sexual Reproduction	135
3.4.1 Production of Gametes in Animals	135
Box 3.4 Germline Segregation in Animals	136

Contents

3.4.1.1	Reproductive Organs in Animals	136
3.4.1.2	Gametogenesis in Animals	138
3.4.1.3	Gametes in Animals	140
3.4.2	Production of Gametes and Spores in Plants	144
3.4.2.1	Reproductive Organs, Gametogenesis and Sporogenesis in Land Plants	144
3.4.2.2	Gametes in Land Plants	148
3.5	Biparental Sexual Reproduction (Amphigony)	149
3.5.1	Encounter and Fusion of Gametes	149
3.5.2	Modes of Gamete Encounter	152
3.5.2.1	Sperm Transfer in Animals	152
3.5.2.2	Transfer of Gametes in Embryophytes	156
3.5.3	Strategies that Promote Encounters Between Gametes	157
3.5.3.1	Strategies of External Fertilization	157
3.5.3.2	Meeting of Partners in Animals with Internal Fertilization	158
3.5.3.3	Pollination in Seed Plants	162
3.5.4	Fertilization	166
3.5.4.1	Fertilization in Animals	166
3.5.4.2	Fertilization in Seed Plants	167
3.5.5	Reproductive Incompatibility	168
3.5.6	Mating Systems	171
3.6	Uniparental Sexual Reproduction	173
3.6.1	Self-Fertilization	173
3.6.2	Parthenogenesis	174
3.6.2.1	Thelytokous Parthenogenesis	176
3.6.2.2	Arrhenotokous and Pseudoarrhenotokous Parthenogenesis	178
3.6.2.3	Geographical Parthenogenesis	180
3.6.2.4	Accidental Parthenogenesis	181
3.6.2.5	Paedogenesis	181
3.6.2.6	Cyclical Parthenogenesis	184
3.6.2.7	Hybrids and Parthenogenesis	184
3.6.2.8	Infectious Parthenogenesis	184
3.6.2.9	Parthenogenesis in Plants	186
3.6.3	Gynogenesis	191
3.6.4	Androgenesis	193
3.6.5	Hybridogenesis	194

Contents

4 Parental Investment in Sexual Reproduction	196
4.1 A First Look at Parental Investment Costs	197
4.1.1 Reproduction Costs in Animals	197
4.1.2 Reproduction Costs in Seed Plants	199
4.2 Fecundity	200
4.2.1 Measuring Fecundity	201
4.2.2 <i>r/k</i> Reproductive Strategies	201
4.3 Temporal Distribution of Reproductive Effort	205
Box 4.1 Pregnancy, Lactation and Sexual Maturity in Mammals	208
4.4 Investment of Animals in Egg and Embryo Development	210
4.4.1 Oviparity	211
4.4.2 Viviparity and Incubation	212
4.4.3 Lecithotrophy	214
4.4.4 Matrotrophy	221
4.5 Parental Care in Animals	225
4.6 Investment of Plants in Gametophyte and Sporophyte Development	229
4.6.1 Gametophyte Development	229
4.6.2 Sporophyte Development	230
4.6.3 Seed and Fruit Development	231
5 Genetics and Cytogenetics of Reproduction	236
5.1 Asexual Reproduction	237
Box 5.1 Clones	239
5.1.1 Genetic Variation Resulting from New Mutations	241
5.1.1.1 Mutations Resulting from Errors in DNA Replication	241
5.1.1.2 Mutations Resulting from Other Causes	241
5.1.1.3 Mutations and Mosaicism	242
5.1.2 Genetic Variation Resulting from Recombination	243
5.1.3 Genetic Variation Resulting from Stochastic Segregation	244
5.1.3.1 Random Segregation of Plasmids in the Prokaryotic Cell	245
5.1.3.2 Mitotic Segregation of Cytoplasmic Organelles	246
Box 5.2 Genetic Elements of the Prokaryotic Cell	247
Box 5.3 Genetic Elements of the Eukaryotic Cell	248
5.1.3.3 Amitosis in Ciliates	250
5.1.4 Epigenetic Variation	251

Contents

5.1.5 Unconventional Mechanisms of Cell Division in Eukaryotes	252
5.1.5.1 Division of Multinucleate Cells	252
5.1.5.2 Variants of Mitosis	253
5.1.6 Intermittent Episodes of Sexual Reproduction	253
5.2 Sexual Reproduction and Sex	254
5.2.1 Sex in Prokaryotes	255
5.2.1.1 Mechanisms of Genetic Exchange in Prokaryotes	256
5.2.1.2 Quantitative Aspects of Genetic Exchange in Prokaryotes	259
5.2.2 General Aspects of Sexual Reproduction in Eukaryotes	259
5.2.2.1 Synopsis of the Sources of Genetic Variation	260
5.2.2.2 Independent Assortment of Chromosomes and Chromatids	261
5.2.2.3 Recombination in the Strict Sense	264
Box 5.4 Recombination	265
5.2.2.4 Syngamy	270
5.2.3 Genetics of Hereditary Transmission Through Different Modes of Sexual Reproduction	271
5.2.3.1 Amphigony	271
5.2.3.2 Self-Fertilization	275
5.2.3.3 Parthenogenesis	278
5.2.3.4 Gynogenesis and Pseudogamy	286
5.2.3.5 Hybridogenesis	287
5.2.3.6 Paternal Genome Loss	289
5.2.3.7 Androgenesis	289
5.2.4 Sexual Leakage	290
5.2.5 Special Cases of Sexual Processes in Eukaryotes	292
5.2.5.1 Ciliate Conjugation	292
5.2.5.2 Parasexual Cycle in Fungi	293
5.2.5.3 Chimerism	294
6 Determination of Sex and Mating Type	297
6.1 Genetic Sex-Determination Systems	301
6.1.1 Chromosomal Sex-Determination Systems	301
6.1.1.1 XY and ZW Systems	305
Box 6.1 X:A in <i>Drosophila</i>	307
6.1.1.2 X0 and Z0 Systems	309

Contents

6.1.1.3	UV System	310
6.1.1.4	Systems with Multiple Heterochromosomes	311
6.1.1.5	Other Chromosomal Systems	315
6.1.1.6	Dosage Compensation	315
	<i>Box 6.2 Dmrt Genes and Sex Development in Animals</i>	318
6.1.2	Genic Sex-Determination Systems	319
6.1.3	Haplodiploid Sex-Determination System	320
6.2	Environmental Sex-Determination Systems	324
6.2.1	Temperature-Dependent Sex Determination	324
6.2.2	Sex Determination Through Interaction with Conspecifics	326
6.2.3	Other Environmental Sex-Determination Systems	328
6.2.3.1	Photoperiod	328
6.2.3.2	Water pH	329
6.2.3.3	Nutrition	329
6.2.3.4	Body Size	329
6.2.3.5	Parasites	330
6.3	Maternal Sex-Determination Systems	331
6.4	Mixed Sex-Determination Systems and Random Sex Determination	333
6.5	Notes on Sexual Differentiation	335
6.6	Determination of Mating Type	338
<hr/>		
7	Reproduction: a Taxonomic Survey	342
7.1	Protists (Unicellular Eukaryotes)	342
7.1.1	Foraminifera	344
7.1.2	Apicomplexans (Sporozoans)	344
7.1.3	Dinoflagellates (Dinophyceans)	345
7.1.4	Ciliates	345
7.1.5	Diatoms	347
7.1.6	Xanthophyceans	349
7.1.7	Hypermastigines	349
7.1.8	Choanoflagellates	349
7.1.9	Mycetozoans	350
7.2	Brown Algae (Phaeophyceans)	350
7.3	Red Algae (Rhodophyceans)	352
7.4	Green Plants (Viridiplantae)	354
7.4.1	Green Algae	354
	<i>Box 7.1 The Complex Life Cycles of Some Green Algae</i>	355
7.4.2	Bryophytes	360

Contents

7.4.3	Pteridophytes	362
7.4.4	Gymnosperms	364
7.4.5	Angiosperms	366
7.5	Fungi	372
7.5.1	Chytridiomycetes	373
7.5.2	Zygomycetes	374
7.5.3	Glomeromycetes	375
7.5.4	Ascomycetes	375
7.5.5	Basidiomycetes	376
7.5.6	Lichens	378
7.5.7	Microsporidians	379
7.6	Metazoans	379
7.6.1	Sponges	380
7.6.2	Cnidarians	380
	<i>Box 7.2 Special Cases of Cnidarian Life Cycles</i>	382
7.6.3	Ctenophores	383
7.6.4	Placozoans, Orthonectids, Dicyemids	383
7.6.5	Acoelomorphs	384
7.6.6	Gastrotrichs	384
7.6.7	Gnathostomulids and Micrognathozoans	384
7.6.8	Synderms	385
7.6.9	Flatworms (Rhabditophorans and Catenulids)	386
7.6.10	Cycliophorans	387
7.6.11	Entoprocts	388
7.6.12	Nemerteans	388
7.6.13	Bryozoans, Phoronids, Brachiopods	388
7.6.14	Molluscs	389
7.6.15	Annelids (Including Pogonophorans, Sipunculids and Echiurids)	391
7.6.16	Tardigrades and Onychophorans	394
7.6.17	Nematomorphs, Priapulids, Loriciferans and Kinorhynchs	394
7.6.18	Nematodes	394
7.6.19	Arthropods	395
7.6.20	Chaetognaths	400
7.6.21	Echinoderms	400
7.6.22	Hemichordates	401
7.6.23	Cephalochordates	401
7.6.24	Tunicates	401
7.6.25	Vertebrates or Craniotes	402
