

TIME AND BODY

Time and Body promotes the application of phenomenological psychopathology and embodied research to a broad spectrum of mental disorders. In a new and practical way, it integrates the latest research on the temporal and intersubjective constitution of the body, self, and its mental disorders from phenomenological, embodied, and interdisciplinary research perspectives. The authors investigate how temporal processes apply to the contribution of embodiment and selfhood, as well as to their destabilization, such as in eating disorders and borderline personality disorders, schizophrenia, depression, social anxiety, or dementia. The chapters demonstrate the applicability of phenomenological psychopathology to a range of illnesses and its relevance to treatment and clinical practice.

CHRISTIAN TEWES is Adjunct Professor (Privatdozent) of Philosophy at the University of Jena, Germany, and he is currently working at the Section of Phenomenological Psychopathology and Psychotherapy, Department of General Psychiatry, University of Heidelberg. His research interests comprise embodiment theories, phenomenology, philosophy of mind, and anthropology.

GIOVANNI STANGHELLINI is a psychiatrist, Chair of the School of Phenomenological-Dynamic Psychotherapy, and Professor of Dynamic Psychology at G. d'Annunzio University of Chieti, Italy.

Endorsements for *Time and Body*

“This is a masterful and timely contribution to our understanding of mental disorders. With essays from leading experts, it shows how psychopathologies are embedded in the world and shaped by the complex intertwining of temporality, embodiment, and intersubjectivity. It will be an authoritative resource in phenomenological psychopathology for years to come.”

Kevin Aho, Professor of Philosophy, Florida Gulf Coast University, USA, and author of *Contexts of Suffering*

“This book is a wide-ranging analysis of how some of the principles of phenomenological philosophy cast light on dementia, anorexia nervosa, social anxiety, and borderline personality disorder. It is a welcome addition to the growing interest in phenomenological psychopathology among psychiatrists, psychologists, and philosophers.”

John Cutting, licensed psychiatrist and honorary Senior Lecturer, Kings College Hospital, UK

“In this volume, the editors bring together a remarkable group of researchers from philosophy, psychiatry, and psychology to advance our understanding of embodied and temporal experience in mental illness. This collection should be read by anyone working at the intersection of philosophy and mental health.”

Anthony Vincent Fernandez, Postdoctoral Research Fellow of Philosophy, University of Oxford, UK, and Assistant Professor of Philosophy, Kent State University, USA

“A veritable tour de phenomenological force! This is a sparkling collection of the brightest and best in contemporary phenomenology, and a timely celebration of Thomas Fuchs’ uniquely important contributions to the future of this rapidly expanding field.”

Bill (KWM) Fulford, Fellow of St Catherine’s College and Member of the Philosophy Faculty, Oxford University, UK

“This is an exciting collection of state-of-the-art phenomenological psychopathology essays. It contains excellent contributions from leading theorists who show how phenomenology and embodied, enactive theories offer new insights in psychopathology (and vice versa). The authors address depression, eating disorders, borderline personality disorder, and schizophrenia – honouring Thomas Fuchs’ own influential contributions.”

Sanneke de Haan, Researcher, Tilburg University, the Netherlands and author of *Enactive Psychiatry*

The book is dedicated to Thomas Fuchs' enduring work in phenomenological psychopathology and embodied research, and to his sixtieth anniversary. Its thematic fields cover his wide-ranging and decades-long research on time, body, and the intersubjective constitution of psychopathology. In dedicating the book to him we wish the jubilarian the best of health and many further years researching these and related fields!
