

Index

- admissible control, 240, 242
- algebraic Riccati equation, 242
- asymptotic stability, 36
 - almost sure, 38
 - in probability, 37
 - in p th moment, 37
- Bochner integral, 17
- Borel–Cantelli lemma, 81
- boundary noise, 82
- bound (growth, spectral), 51
- Burkholder–Davis–Gundy’s inequality, 25
- Chapman–Kolmogorov equation, 19
- comparison method, 219
- contraction mapping method, 210
- covariance operator, 22
- cross quadratic variation, 21
- decay, decayable
 - with rate $\lambda(t)$ in the almost sure sense, 39
 - with rate $\lambda(t)$ in the p th moment, 39
- dissipative (of an operator), 9
- distribution (of a random variable), 16
- Doob’s inequality, 21
- exponential stability, 39
 - almost sure, 39
 - in p th moment, 39
- exponential ultimately bounded in mean square, 146
- feedback control, 240
- Feller property (strong), 19
- filtration, 16
 - normal, 16
 - satisfying the usual conditions, 16
- fractional power (of an operator), 15
- fundamental solution, 179
- Gaussian measure, 22
- Green operator, 179
- Hahn–Banach theorem, 4
- Hille–Yosida theorem, 8
- invariant measure, 150
- Itô’s formula, 26, 35
- Itô type of functional, 26, 35
- linear growth condition, 28
- Lipschitz continuous condition, 28, 100
- Lumer–Phillips theorem, 9
- Lyapunov
 - equation, 56
 - exponent, 45
 - exponent method, 45
 - function, 42, 54, 56, 117
 - second (direct) method, 42
- Markov process, 19
- Markov property (strong), 19
- martingale, 20
 - continuous L^p , 20
 - local, 20
- measurable
 - mapping, 16
 - space, 16
 - stochastic process, 17

- modification of a stochastic process, 18
- operator (linear), 3
 - compact, 6
 - Hilbert–Schmidt, trace-class, 6
 - resolvent, 7
 - self-adjoint, symmetric, 5
 - variational, 131
- optimal control, 240
- predator–prey model, 226
- probability
 - measure, 16
 - space, 16
 - space, complete, 16
- process
 - adapted, 18
 - continuous, 20
 - integrable, 20
 - progressively measurable, 18
- quadratic cost functional, 240
- quadratic variation, 21
- Q -Wiener process, 22
- random variable, 16
- Razumikhin function method, 214
- Riesz representation theorem, 4
- semigroup (strongly continuous or C_0), 8
 - analytic, (eventually) compact, 13, 14
 - bounded, norm continuous, contraction, 8
- Sobolev space, 2
- solution in the strong sense, 28
- solution, mild or strong, 27, 34
- spectrum (retarded), 7, 189
 - continuous, point, residual (retarded), 7, 189
- spectrum-determined growth condition, 51
- submartingale, 20
- supermartingale, 20
- stability, 36
 - almost sure (strong), 39
 - in probability (strong), 37
 - in the global (strong), 36
 - in the p th moment, 37
- stabilizable (of a controllable system), 240
- stabilization by noise, 168
- stable C_0 -semigroup, 47
- stationary solution, 88, 89
- stochastic
 - control, 239
 - delay differential equation, 196, 206, 218
 - differential equation, 27
 - Navier–Stokes equation, 236
 - reaction-diffusion equation, 232
- stochastic convolution, 24
- stochastic Fubini theorem, 25
- stochastic integral, 23
- stopping time, 17
- Stratonovich integral, 177
- tensor (cross) quadratic variation, 21
- trajectory of a stochastic process, 18
- transition probability function, 19
 - homogeneous, 19
- ultimate boundedness in the p th moment, 39
- weakly convergent, 151
- Yosida approximation, 9, 30
- Young's inequality, 115
