	<i>List of Figures</i>	[page x]
	<i>Preface</i>	[xi]
	<i>Acknowledgements</i>	[xiv]
	<i>Symbols and Abbreviations</i>	[xvi]
1	Introduction	[1]
	1.1 Arbitrary Objects and the Philosophy of Mathematics	[1]
	1.2 Scratching the Surface	[3]
	1.3 Structure and Method	[4]
	1.4 Intended Audience	[8]
	1.5 On Notation and Technical Matters	[10]
2	Metaphysics of Mathematics	[13]
	2.1 The Methodology of Philosophy of Mathematics	[13]
	2.2 Quietism	[16]
	2.3 Naive Metaphysics and Foundational Metaphysics	[24]
	2.4 Naive Metaphysics Only	[26]
	2.5 Metaphysics of Mathematics	[32]
	2.6 An Objection from Pseudo-science	[34]
	2.7 Mathematical Models	[36]
3	Arbitrary Objects	[38]
	3.1 The Motivating Idea	[38]
	3.2 Early Russell on Variables	[40]
	3.3 Arbitrary Objects and Their Relations	[44]
	3.4 Identity and Comprehension	[45]
	3.5 State Spaces	[48]
	3.6 Being and Being in a State	[49]
	3.7 Hairdressers	[53]
	3.8 Baby Steps	[54]
	3.9 Properties, Quantities	[58]
4	Mathematical Objects as Arbitrary Objects	[61]
	4.1 Arbitrary Natural Numbers	[61]
	4.2 More Fregean Worries	[66]
	4.3 Quasi-concrete Objects	[68]
	4.4 Knowledge of Arbitrary Strings	[69]
	4.5 Knowledge by Acquaintance and Knowledge by Description	[74]
	4.6 Theory and Applications	[75]

- 5 Structure in Mathematics [78]
 - 5.1 Form and Structure [78]
 - 5.2 The Question of Realism [80]
 - 5.3 Platonism and Reductionism [83]
 - 5.4 Eliminative Structuralism [85]
 - 5.5 Non-eliminative Structuralism [94]
 - 5.6 Structure and Computation [98]
 - 5.7 The Peculiar Case of Set Theory [102]
- 6 Mathematical Structures [105]
 - 6.1 From Arbitrary Objects over Arbitrary Systems to Generic Systems [105]
 - 6.2 Fair Dice [106]
 - 6.3 The Generic ω -Sequences [108]
 - 6.4 The Generic Natural Number Structure [111]
 - 6.5 Other Arbitrary Systems [113]
 - 6.6 The Computable Generic ω -Sequence [114]
 - 6.7 The Arbitrary Countable Graph [115]
 - 6.8 Individual Structures [117]
 - 6.9 The Generic Hierarchy [120]
- 7 Kit Fine [123]
 - 7.1 Concept and Object [124]
 - 7.2 Variable Objects and Dependence [127]
 - 7.3 Identity, Systems, and Comprehension [129]
 - 7.4 Cantorian Abstraction [134]
 - 7.5 The Natural Number Structure [136]
 - 7.6 Predicativism? [139]
 - 7.7 Universals versus Variable Numbers [141]
- 8 Generic Systems and Mathematical Structuralism [143]
 - 8.1 Generic Structuralism? [143]
 - 8.2 Themes from Eliminative and Non-Eliminative Structuralism [146]
 - 8.3 Theories and Structures [153]
 - 8.4 Comparison with Fine [155]
 - 8.5 Quantification and Reference [159]
- 9 Reasoning about Generic ω -Sequences [162]
 - 9.1 Individual Concepts and Carnapian Modal Logic [162]
 - 9.2 Generic Truth [165]
 - 9.3 Definability and Indiscernibility [172]
 - 9.4 Determination and Independence [177]
 - 9.5 Computational Complexity [182]
 - 9.6 Axiomatizing Second-Order Arithmetic [184]
 - 9.7 Well-Ordering [186]

10	Probability and Random Variables	[189]
10.1	Random Variables	[189]
10.2	A Connection with Individual Concepts?	[191]
10.3	Uniformity	[193]
10.4	Non-Archimedean Probability Functions	[195]
10.5	Set Probabilities	[200]
11	Directions for Future Research	[208]
11.1	Success or Failure?	[208]
11.2	Towards a General Theory	[210]
11.3	Aspects and Applications	[211]
	<i>Bibliography</i>	[215]
	<i>Index</i>	[224]
