## Habits

This book evaluates how the pragmatist notion of habit can influence current debates at the crossroads between philosophy, cognitive sciences, neurosciences, and social theory. It deals with the different aspects of the pragmatic turn involved in 4E cognitive science and traces back the roots of such a pragmatic turn to both classical and contemporary pragmatism. Written by renowned philosophers, cognitive scientists, neuroscientists, and social theorists, this volume fills the need for an interdisciplinary account of the role of “habit.” Researchers interested in the philosophy of mind, cognitive science, neuroscience, psychology, social theory, and social ontology will need this book to fully understand the pragmatist turn in current research on mind, action, and society.

FAUSTO CARUANA is Research Scientist at the Institute of Neuroscience of the Italian National Research Council (CNR) in Parma, Italy. He is specialized in social, cognitive, and affective neuroscience with a focus on the neural and psychological mechanisms underlying emotions, empathy, mirror neurons, and motor cognition.

ITALO TESTA is Associate Professor in Theoretical Philosophy at the University of Parma, Italy, where he researches critical theory, pragmatism, embodied cognition, social ontology, and German classical philosophy with a focus on the notions of second nature and the theory of recognition.
