# Contents

Creative use of existing data 81  
Confidentiality 87  
Summary 88  
Questions 88  
Recommended reading 88  
References 89  

## Chapter 4  Healthy research: Study designs for public health 92

The ideal study 94  
Intervention studies or trials 95  
Observational studies 100  
A word about ethics 113  
Summary 116  
Questions 116  
Recommended reading 117  
References 118  

## Chapter 5  Why? Linking exposure and disease 120

Looking for associations 121  
Ratio measures (relative risk) 123  
Difference measures (attributable risk) 129  
Relative risk versus attributable risk: An example 138  
Looking for associations when the measures are continuous 139  
Summary 140  
Questions 141  
Recommended reading 143  
References 143  

## Chapter 6  Heads or tails? The role of chance 145

Random sampling error 146  
Statistical significance: Could an apparent association have arisen by chance? 147  
Confidence intervals 148  
Power: Could we have missed a true association? 151  
Interpreting p-values and confidence intervals 152  
Statistical versus clinical significance 155  
Summary 157  
Questions 157  
Recommended reading 158  
References 158  

## Chapter 7  All that glitters is not gold: The problem of error 159

Sources of error in epidemiological studies 160  
Selection bias 161  
Measurement or information error 171
Chapter 8  Muddied waters: The challenge of confounding 185

An example of confounding: Is alcohol a risk factor for lung cancer? 187
Characteristics of a confounder 189
The effects of confounding 190
Control of confounding through study design 195
Control of confounding in data analysis 200
Confounding: The bottom line 206
Questions 207
Recommended reading 208
References 209

Chapter 9  Reading between the lines: Reading and writing epidemiological papers 210

The research question and study design 212
Internal validity 212
So what? Are the results important? 221
Generalisability (external validity) 222
Descriptive studies 223
Writing papers 223
Summary: One swallow doesn’t make a summer 224
Questions 225
Recommended reading 225
References 226

Chapter 10  Who sank the boat? Association and causation 228

What do we mean by a cause? 230
Association versus causation 233
Evaluating causation 235
An example: Does H. pylori cause stomach cancer? 241
Conclusion 242
Questions 242
Recommended reading 243
References 243

Chapter 11  Assembling the building blocks: Reviews and their uses 244

What is a systematic review? 245
Specifying the research question 247
Identifying the literature 247
Appraising the literature 249
Chapter 12  Surveillance: Collecting health-related data for epidemiological intelligence and public health action

Martyn Kirk, Penelope Webb and Chris Bain

The scope of surveillance 267
Why conduct surveillance? 267
Types of surveillance 268
Surveillance essentials 275
Summary 278
Questions 279
Recommended reading 279
References 279

Chapter 13  Outbreaks, epidemics and clusters

Martyn Kirk, Adrian Sleigh and Penelope Webb

Outbreaks, epidemics and clusters 284
Epidemiology of infectious diseases 285
Outbreak management and investigation 290
Evidence for causation 295
Non-infectious clusters and outbreaks 296
Summary 299
Questions 299
Recommended reading 299
References 300

Chapter 14  Prevention: Better than cure?

Disease prevention in public health 303
The scope for preventive medicine 307
Strategies for prevention 310
The population attributable fraction as a guide to prevention 314
Prevention in practice 316
Evaluation of preventive interventions in practice 319
A final (cautionary) word 320
Questions 321
Recommended reading 321
References 321
# Table of Contents

## Chapter 15  Early detection: What benefits at what cost? 324

- Why screen? 325
- The requirements of a screening program 328
- Evaluation of a screening program 340
- Summary 349
- Questions 350
- Recommended reading 351
- References 351

## Chapter 16  Epidemiology and the public’s health 353

- Translating epidemiological research into practice 354
- Challenges 356
- Limiting error 357
- Improving measurement 358
- Synthesis and integration 360
- Epidemiology and complex systems 362
- A final word 363
- Recommended reading 364
- References 364

### Appendix 1: Direct standardisation 366

### Appendix 2: Standard populations 368

### Appendix 3: Calculating risk and lifetime risk from routine data 370

### Appendix 4: Indirect standardisation 372

### Appendix 5: Calculating life expectancy from a life table 374

### Appendix 6: Why the odds ratio approximates the relative risk for a rare disease 376

### Appendix 7: Formulae for calculating confidence intervals for common epidemiological measures 377

### Appendix 8: The Mantel-Haenszel method for calculating pooled odds ratios 379
