	<i>Preface</i>	<i>page</i> xiii
	<i>Preface to Second Edition</i>	xv
	<i>Preface to First Edition</i>	xvii
	<i>A Note About Software</i>	xxi
<b>1</b>	<b>Introduction</b>	1
	1.1 Development of Chemical Modeling	1
	1.2 Scope of This Book	4
<b>2</b>	<b>Modeling Overview</b>	5
	2.1 Conceptual Models	5
	2.2 Configurations of Reaction Models	9
	2.3 Uncertainty in Geochemical Modeling	17
	<b>PART I EQUILIBRIUM IN NATURAL WATERS</b>	21
<b>3</b>	<b>The Equilibrium State</b>	23
	3.1 Thermodynamic Description of Equilibrium	24
	3.2 Choice of Basis	29
	3.3 Governing Equations	30
	3.4 Number of Variables and the Phase Rule	43
<b>4</b>	<b>Solving for the Equilibrium State</b>	45
	4.1 Governing Equations	45
	4.2 Solving Nonlinear Equations	46
	4.3 Solving the Governing Equations	51
	4.4 Finding the Stable Phase Assemblage	56
<b>5</b>	<b>Changing the Basis</b>	59
	5.1 Determining the Transformation Matrix	60
	5.2 Rewriting Reactions	62
	5.3 Altering Equilibrium Constants	63
	5.4 Re-expressing Bulk Composition	64
<b>6</b>	<b>Equilibrium Models of Natural Waters</b>	67
	6.1 Chemical Model of Seawater	67

6.2	Amazon River Water	78
6.3	Red Sea Brine	81
<b>7</b>	<b>Redox Disequilibrium</b>	<b>87</b>
7.1	Redox Potentials in Natural Waters	87
7.2	Redox Coupling	88
7.3	Morro do Ferro Groundwater	90
7.4	Energy Available for Microbial Respiration	93
<b>8</b>	<b>Activity Coefficients</b>	<b>97</b>
8.1	Debye–Hückel Methods	98
8.2	Virial Methods	103
8.3	Comparison of the Methods	111
8.4	Brine Deposit at Sebkhath El Melah	114
<b>9</b>	<b>Sorption and Ion Exchange</b>	<b>117</b>
9.1	Distribution Coefficient ( $K_d$ ) Approach	117
9.2	Freundlich Isotherms	119
9.3	Langmuir Isotherms	120
9.4	Ion Exchange	121
9.5	Numerical Solution	124
9.6	Example Calculations	126
<b>10</b>	<b>Surface Complexation</b>	<b>131</b>
10.1	Complexation Reactions	132
10.2	Effect of Surface Charge	133
10.3	Governing Equations	137
10.4	Numerical Solution	139
10.5	Example Calculation	142
10.6	Limitations of the Modeling	144
<b>11</b>	<b>Three-Layer Complexation</b>	<b>147</b>
11.1	Triple-Layer Model	147
11.2	CD-MUSIC Model	149
11.3	Governing Equations	149
11.4	Numerical Solution	151
11.5	Example Calculation	153
11.6	Choice of Complexation Data	156
<b>12</b>	<b>Automatic Reaction Balancing</b>	<b>157</b>
12.1	Calculation Procedure	157
12.2	Dissolution of Pyrite	162
12.3	Equilibrium Equations	163
<b>13</b>	<b>Uniqueness</b>	<b>167</b>
13.1	The Question of Uniqueness	167
13.2	Examples of Nonunique Solutions	168
13.3	Coping With Nonuniqueness	174

	<b>PART II REACTION PROCESSES</b>	175
<b>14</b>	<b>Mass Transfer</b>	177
	14.1 Simple Reactants	177
	14.2 Extracting the Overall Reaction	180
	14.3 Special Configurations	181
<b>15</b>	<b>Polythermal, Fixed, and Sliding Paths</b>	183
	15.1 Polythermal Reaction	183
	15.2 Fixed Activity and Fugacity	185
	15.3 Sliding Activity and Fugacity	187
<b>16</b>	<b>Geochemical Buffers</b>	197
	16.1 Buffers in Solution	197
	16.2 Minerals as Buffers	202
	16.3 Gas Buffers	207
<b>17</b>	<b>Kinetics of Dissolution and Precipitation</b>	211
	17.1 Kinetic Rate Laws	212
	17.2 From Laboratory to Application	215
	17.3 Numerical Solution	216
	17.4 Example Calculations	218
	17.5 Modeling Strategy	221
<b>18</b>	<b>Redox Kinetics</b>	223
	18.1 Rate Laws for Oxidation and Reduction	223
	18.2 Heterogeneous Catalysis	225
	18.3 Enzymes	227
	18.4 Numerical Solution	228
	18.5 Example Calculation	229
<b>19</b>	<b>Microbial Kinetics</b>	233
	19.1 Microbial Respiration and Fermentation	233
	19.2 Monod Equation	235
	19.3 Thermodynamically Consistent Rate Laws	236
	19.4 General Kinetic Model	237
	19.5 Example Calculation	239
<b>20</b>	<b>Association and Dissociation Kinetics</b>	243
	20.1 Kinetic Rate Laws	243
	20.2 Numerical Solution	245
	20.3 Aluminum Fluoride Complexation	250
<b>21</b>	<b>Kinetics of Gas Transfer</b>	255
	21.1 Kinetic Rate Laws	255
	21.2 Numerical Solution	256
	21.3 CO <sub>2</sub> Efflux From a Small Lake	258

x	<i>Contents</i>	
<b>22</b>	<b>Stable Isotopes</b>	261
	22.1 Isotope Fractionation	262
	22.2 Mass Balance Equations	263
	22.3 Fractionation in Reacting Systems	265
	22.4 Dolomitization of a Limestone	268
<b>23</b>	<b>Transport in Flowing Groundwater</b>	273
	23.1 Groundwater Flow	273
	23.2 Mass Transport	275
	23.3 Advection–Dispersion Equation	279
	23.4 Numerical Solution	280
	23.5 Example Calculation	284
<b>24</b>	<b>Reactive Transport</b>	289
	24.1 Mathematical Model	289
	24.2 Numerical Solution	293
	24.3 Example Calculations	295
<b>25</b>	<b>Stagnant Zones</b>	303
	25.1 Conceptual Model	303
	25.2 Governing Equations	304
	25.3 Numerical Solution	306
	25.4 Example Calculation	306
	<b>PART III APPLIED REACTION MODELING</b>	311
<b>26</b>	<b>Hydrothermal Fluids</b>	313
	26.1 Origin of a Fluorite Deposit	313
	26.2 Black Smokers	318
	26.3 Energy Available to Thermophiles	322
<b>27</b>	<b>Geothermometry</b>	331
	27.1 Principles of Geothermometry	332
	27.2 Hot Spring at Hveravik, Iceland	336
	27.3 Geothermal Fields in Iceland	339
<b>28</b>	<b>Evaporation</b>	345
	28.1 Springs and Saline Lakes of the Sierra Nevada	345
	28.2 Chemical Evolution of Mono Lake	349
	28.3 Evaporation of Seawater	353
<b>29</b>	<b>Sediment Diagenesis</b>	359
	29.1 Dolomite Cement in the Gippsland Basin	360
	29.2 Lyons Sandstone, Denver Basin	363
<b>30</b>	<b>Kinetics of Water–Rock Interaction</b>	371
	30.1 Approach to Equilibrium and Steady State	371
	30.2 Quartz Deposition in a Fracture	375
	30.3 Silica Transport in an Aquifer	378

<i>Contents</i>		xi
30.4	Ostwald's Step Rule	379
30.5	Dissolution of Albite	381
<b>31</b>	<b>Weathering</b>	<b>385</b>
31.1	Rainwater Infiltration in an Aquifer	385
31.2	Weathering in a Soil	388
<b>32</b>	<b>Oxidation and Reduction</b>	<b>393</b>
32.1	Uranyl Reduction by Ferrous Iron	393
32.2	Autocatalytic Oxidation of Manganese	396
32.3	Microbial Degradation of Phenol	399
<b>33</b>	<b>Waste Injection Wells</b>	<b>403</b>
33.1	Caustic Waste Injected in Dolomite	403
33.2	Gas Blowouts	406
<b>34</b>	<b>Petroleum Reservoirs</b>	<b>409</b>
34.1	Sulfate Scaling in North Sea Oil Fields	410
34.2	Alkali Flooding	414
<b>35</b>	<b>Acid Drainage</b>	<b>421</b>
35.1	Role of Atmospheric Oxygen	421
35.2	Buffering by Wall Rocks	424
35.3	Fate of Dissolved Metals	426
<b>36</b>	<b>Contamination and Remediation</b>	<b>431</b>
36.1	Contamination With Inorganic Lead	431
36.2	Groundwater Chromatography	435
<b>37</b>	<b>Microbial Communities</b>	<b>439</b>
37.1	Arsenate Reduction by <i>B. arsenicoselenatis</i>	439
37.2	Zoning in an Aquifer	443
<i>Appendix A</i>	<b>Sources of Modeling Software</b>	451
<i>Appendix B</i>	<b>Evaluating the HMW Activity Model</b>	455
<i>Appendix C</i>	<b>Minerals in the LLNL Database</b>	461
<i>Appendix D</i>	<b>Nonlinear Rate Laws</b>	469
	<i>References</i>	471
	<i>Index</i>	495
