Index

absolutely monotonic function, 127
Basic Composition formula, 38
Bernstein’s theorem, 127
Boas–Widder theorem, 125, 176
Cauchy mean-value theorem for divided differences, 125
Cauchy–Binet formula, 34
Cayley–Menger matrix, 192
Chordal graph, 70
complete homogeneous symmetric polynomials $h_k(u)$, 246, 256
divided differences, 124
dominated convergence theorem (Lebesgue), 122
elementary symmetric polynomials $e_k(u)$, 256
everywise map/function/transform $f[A]$, 40
everywise map/function/transform $f_G[A]$, 59
polynomial positivity preserver, 216
power $A^{\alpha}$, 40
powers preserving positivity $H_G$, 64
Fekete–Schoenberg lemma, 29
forward difference $(\Delta_1 f)(x)$, 124, 176
Further questions, 71, 82, 250
Gaussian kernel $T_G$, 37, 105
gcd matrix, 86
Gegenbauer polynomials, 109, 110
g Amaric mean $A#B$, 87
Gram matrix, 8, 107, 109, 191
Hadamard composition of polynomials/power series, 19
Hamburger’s theorem, 132
Hankel
moment matrix $H_n$, 10
$TN n \times n$ matrices $\mathbb{C}^{n \times n}$, 53
Hilbert sphere $S^{\infty}$, 106
Historical notes, 11, 18, 19, 26, 97, 99, 101, 104, 121, 130, 138, 193, 200
homomorphic function, 151
homogeneous space, n-point, 191, 205
homotopy argument, 34, 74
Horn–Loewner theorem, stronger form, 114
Identity theorem, 145
integration trick, 42, 66, 68, 80, 81
integration trick/extension principle, 45, 241, 250, 253
Jacobi formula, 7
Jacobi–Trudi identity (dual), 257
Kronecker product $A \otimes B$, 19
Kuratowski embedding, 203
Laguerre–Poulain–Rolle trick, 33, 73
Loewner
corner function, 79, 159, 167
matrix $L_f(x_1, \ldots, x_k)$, 18, 101
monotone function, 66, 159, 167
monotone function theorem, 100
order, 66, 167
positive function, 40, 155
super-additive function, 66
majorization (weak), 234
metric
gometry, 101, 190, 200, 203
space, 101
mid-convex
additive function, 46
multiplicative function, 49
Ostrowski’s theorem, 46
Sierpiński’s theorem, 48
mollifier, 121
moment problem:
Hamburger, 11
Stietjes, 26
moment-sequence $s(\mu)$, 10, 131
monomial positive polynomial, 236
Montel’s theorem, 152
Moore–Penrose inverse $A^\dagger$, 14, 87, 265
Morrera’s theorem, 152
Motzkin, Theodore, 138
PMP matrix, 91, 268
Pólya frequency function, 37
positive definite
function, 104, 108, 110
kernel, 131, 155
matrix, 4
positive semidefinite
kernel, 155
matrices $P_n, P_n(I)$, 3, 40
matrices with zero pattern/sparsity $P_G$, 12, 58
positivity certificate, 139
positivity-certificate trick, 142
Principal specialization formula, 222, 241
probability, connections, 20
Rayleigh quotient, generalized, 265, 266
Rayleigh–Ritz theorem, 170
real analytic function $f \in C^\omega(I)$, 144
Schöenberg’s theorem:
oiginal form, 98
stronger form, 130, 132
Schur
complement, 13
polynomial $p_\omega(\mu)$, 221
polynomial, leading term of, 228
positive polynomial, 236
product of matrices $A \odot B$, 18
product theorem, 19, 88
sign changes $S^\omega(\cdot)$, 25, 73
singular value decomposition, 4
spectral theorem, 4
spherical distance $\varsigma$, 107
sum-of-squares polynomial, 138
Sylvester’s criterion, 6, 89
Toeplitz cosine matrix, 9, 25, 86, 92
totally nonnegative $(TN, TN_p)$
kernel, 37
kernel of order $p$, 37
matrix, 23
matrix of order $p$, 23
totally positive $(TP, TP_p)$
kernel, 37
kernel of order $p$, 37
matrix, 23
matrix of order $p$, 23
triangulation/trilateration, 193
truncation $A^{(1)}$ of a matrix $A$, 26
Vandermonde determinant $V(\mu)$, 115, 222
Vandermonde matrix, generalized, 32
variation diminishing property: sign regular
matrices, 24
Vasudeva’s theorem:
oiginal form, 98
stronger form, 127
Weyl dimension formula, 222
Weyl’s inequality, 170
Wiener norm, 139, 207
