Preface xv
Acknowledgments xviii
Notation xix

Part I Classic Statistical Inference 1

1 Algorithms and Inference 3
1.1 A Regression Example 4
1.2 Hypothesis Testing 8
1.3 Notes 11
1.4 Exercises 11

2 Frequentist Inference 13
2.1 Frequentism in Practice 15
2.2 Frequentist Optimality 19
2.3 Notes and Details 21
2.4 Exercises 22

3 Bayesian Inference 23
3.1 Two Examples 25
3.2 Uninformative Prior Distributions 29
3.3 Flaws in Frequentist Inference 31
3.4 A Bayesian/Frequentist Comparison List 34
3.5 Notes and Details 37
3.6 Exercises 38

4 Fisherian Inference and Maximum Likelihood Estimation 40
4.1 Likelihood and Maximum Likelihood 40
4.2 Fisher Information and the MLE 43
4.3 Conditional Inference 47
4.4 Permutation and Randomization 51

Table of Contents
More Information

4.5 Notes and Details 53
4.6 Exercises 55

5 Parametric Models and Exponential Families 56
5.1 Univariate Families 57
5.2 The Multivariate Normal Distribution 58
5.3 Fisher's Information Bound for Multiparameter Families 62
5.4 The Multinomial Distribution 64
5.5 Exponential Families 67
5.6 Notes and Details 72
5.7 Exercises 75

Part II Early Computer-Age Methods 77

6 Empirical Bayes 79
6.1 Robbins' Formula 79
6.2 The Missing-Species Problem 82
6.3 A Medical Example 88
6.4 Indirect Evidence 1 92
6.5 Notes and Details 92
6.6 Exercises 94

7 James–Stein Estimation and Ridge Regression 96
7.1 The James–Stein Estimator 96
7.2 The Baseball Players 99
7.3 Ridge Regression 102
7.4 Indirect Evidence 2 107
7.5 Notes and Details 109
7.6 Exercises 113

8 Generalized Linear Models and Regression Trees 114
8.1 Logistic Regression 115
8.2 Generalized Linear Models 122
8.3 Poisson Regression 126
8.4 Regression Trees 130
8.5 Notes and Details 134
8.6 Exercises 136

9 Survival Analysis and the EM Algorithm 138
9.1 Life Tables and Hazard Rates 138
9.2 Censored Data and the Kaplan–Meier Estimate 141
9.3 The Log-Rank Test 146

Table of Contents
More Information

9.4 The Proportional Hazards Model 150
9.5 Missing Data and the EM Algorithm 153
9.6 Notes and Details 157
9.7 Exercises 162

10 The Jackknife and the Bootstrap 163
10.1 The Jackknife Estimate of Standard Error 164
10.2 The Nonparametric Bootstrap 167
10.3 Resampling Plans 171
10.4 The Parametric Bootstrap 177
10.5 Influence Functions and Robust Estimation 182
10.6 Notes and Details 185
10.7 Exercises 188

11 Bootstrap Confidence Intervals 189
11.1 Neyman's Construction for One-Parameter Problems 189
11.2 The Percentile Method 193
11.3 Bias-Corrected Confidence Intervals 198
11.4 Second-Order Accuracy 200
11.5 Bootstrap-t Intervals 203
11.6 Objective Bayes Intervals and the Confidence Distribution 206
11.7 Notes and Details 212
11.8 Exercises 215

12 Cross-Validation and C_p Estimates of Prediction Error 217
12.1 Prediction Rules 217
12.2 Cross-Validation 222
12.3 Covariance Penalties 227
12.4 Training, Validation, and Ephemeral Predictors 236
12.5 Notes and Details 239
12.6 Exercises 242

13 Objective Bayes Inference and MCMC 243
13.1 Objective Prior Distributions 244
13.2 Conjugate Prior Distributions 247
13.3 Model Selection and the Bayesian Information Criterion 253
13.4 Gibbs Sampling and MCMC 261
13.5 Example: Modeling Population Admixture 266
13.6 Notes and Details 271
13.7 Exercises 273

14 Postwar Statistical Inference and Methodology 275

Table of Contents
More Information

Part III Twenty-First-Century Topics 279

15 Large-Scale Hypothesis Testing and FDRs 281
15.1 Large-Scale Testing 282
15.2 False-Discovery Rates 285
15.3 Empirical Bayes Large-Scale Testing 288
15.4 Local False-Discovery Rates 292
15.5 Choice of the Null Distribution 296
15.6 Relevance 300
15.7 Notes and Details 304
15.8 Exercises 307

16 Sparse Modeling and the Lasso 308
16.1 Forward Stepwise Regression 309
16.2 The Lasso 313
16.3 Fitting Lasso Models 318
16.4 Least-Angle Regression 319
16.5 Fitting Generalized Lasso Models 323
16.6 Post-Selection Inference for the Lasso 327
16.7 Connections and Extensions 329
16.8 Notes and Details 331
16.9 Exercises 334

17 Random Forests and Boosting 335
17.1 Random Forests 336
17.2 Boosting with Squared-Error Loss 344
17.3 Gradient Boosting 349
17.4 Adaboost: the Original Boosting Algorithm 352
17.5 Connections and Extensions 356
17.6 Notes and Details 358
17.7 Exercises 361

18 Neural Networks and Deep Learning 363
18.1 Neural Networks and the Handwritten Digit Problem 365
18.2 Fitting a Neural Network 368
18.3 Autoencoders 374
18.4 Deep Learning 376
18.5 Learning a Deep Network 380
18.6 Notes and Details 383
18.7 Exercises 386

19 Support-Vector Machines and Kernel Methods 387
19.1 Optimal Separating Hyperplane 388

Table of Contents
More Information

19.2 Soft-Margin Classifier 390
19.3 SVM Criterion as Loss Plus Penalty 391
19.4 Computations and the Kernel Trick 393
19.5 Function Fitting Using Kernels 396
19.6 Example: String Kernels for Protein Classification 397
19.7 SVMs: Concluding Remarks 399
19.8 Kernel Smoothing and Local Regression 399
19.9 Notes and Details 402
19.10 Exercises 405

20 Inference After Model Selection 407
20.1 Simultaneous Confidence Intervals 408
20.2 Accuracy After Model Selection 415
20.3 Selection Bias 421
20.4 Combined Bayes–Frequentist Estimation 425
20.5 Notes and Details 430
20.6 Exercises 433

21 Empirical Bayes Estimation Strategies 435
21.1 Bayes Deconvolution 435
21.2 g-Modeling and Estimation 438
21.3 Likelihood, Regularization, and Accuracy 441
21.4 Two Examples 446
21.5 Generalized Linear Mixed Models 451
21.6 Deconvolution and f-Modeling 454
21.7 Notes and Details 458
21.8 Exercises 459
