Part I Introduction to Floral Diagrams 1

- 1 Introduction to Flower Morphology 3
 - 1.1 Definition of Flowers 3
 - 1.1.1 Complex versus Reduced Flowers 5
 - 1.2 Floral Organs 6
 - 1.2.1 Perianth 6
 - 1.2.2 Androecium 10
 - 1.2.3 Gynoecium 18
 - 1.3 The Floral Axis and Receptacle 24
 - 1.4 Floral Nectaries 26
 - 1.5 Relationship of Flowers with Inflorescences 27
 - 1.5.1 Terminal and Lateral Flowers 27
 - 1.5.2 Pseudanthia 29
 - 1.5.3 Bracts and Bracteoles 29
 - 1.5.4 Epicalyx 30
 - 1.6 Symmetry and Orientation of Flowers 31
 - 1.7 Phyllotaxis 34
 - 1.7.1 Spirals and Whorls 34
 - 1.7.2 Merism 36
 - 1.7.3 Aestivation Patterns 39
 - 1.8 Fusion of Floral Parts 40
- 2 The Significance of Floral Diagrams 44
 - 2.1 Definition and Significance of Floral Diagrams 44
 - 2.2 Types of Floral Diagrams 45
 - 2.3 Floral Diagrams and Floral Formulae 47

viii Contents

- 2.4 Problems of Three-Dimensional Complexity 47
- 2.5 Representation of Accessory Structures 50
- 2.6 Floral Heteromorphism and Unisexual Flowers 52
- 2.7 Floral Development and Floral Diagrams 54
 - 2.7.1 Meristems and Developmental Constraints 54
 - 2.7.2 Reduction and Loss of Organs 57
- 2.8 Evolutionary Developmental Genetics and Floral Diagrams 58

- 3 Floral Diagrams Used in This Book 61

- Part II Floral Diagrams in the Major Clades of Flowering Plants 65**

- 4 Systematic Significance of Floral Diagrams 67
 - 4.1 Floral Diagrams and the Molecular Phylogeny 67
 - 4.1.1 Molecular and Morphological Characters 67
 - 4.1.2 The Angiosperm Phylogeny Group Classification 69
 - 4.1.3 Fossil Flowers and Floral Diagrams 71
 - 4.2 Overview of Floral Diagrams in the Major Clades of Flowering Plants 72

- 5 Basal Angiosperms: The Ascent of Flowers 74
 - 5.1 The Basalmost Angiosperms: Amborellales, Austrobaileyales, Nymphaeales 74
 - 5.2 Magnoliales 82
 - 5.3 Laurales 88
 - 5.4 Piperales 96

- 6 Monocots: Variation on a Trimerous Bauplan 102
 - 6.1 The Basal Clades: Acorales and Alismatales 104
 - 6.2 The Lilioid Clades: Dioscoreales, Pandanales, Liliales and Asparagales 114
 - 6.3 The Commelinid Clade: Arecales, Commelinales, Poales and Zingiberales 129

- 7 Early Diverging Eudicots: A Transition between Two Flower Types 148
 - 7.1 Ranunculales 148
 - 7.2 The Basal Eudicot Grade: Proteales, Trochodendrales, Buxales, Gunnerales 161

- 8 Basal Pentapetalae: The Event of Pentamerous Flowers 172
 - 8.1 Berberidopsidales 172
 - 8.2 Santalales 176
 - 8.3 Dilleniales 181

9	Rosids: The Diplostemonous Alliance	184
9.1	The Basal Clades: Saxifragales and Vitales	184
9.2	Malvids	196
9.2.1	Early Diverging Malvids: Geraniales and Myrtales	196
9.2.2	Remaining Malvids: Crossosomatales, Sapindales, Brassicales and Malvales	211
9.3	Fabids	241
9.3.1	COM-Clade: Celastrales-Oxalidales-Malpighiales	243
9.3.2	Remaining Fabids: Fabales, Rosales, Cucurbitales, Fagales	273
10	Caryophyllids: How to Reinvent Lost Petals	301
10.1	Polygonales	303
10.2	Caryophyllales	314
11	Asterids: Tubes and Pseudanthia	341
11.1	Basal Asterids: Cornales and Ericales	341
11.2	Lamiids: Gentianales, Solanales, Boraginales and Lamiales	370
11.3	Campanulids: Aquifoliales, Dipsacales, Apiales and Asterales	393
	Part III Conclusions	413
12	Distinctive Systematic Characters and Apomorphic Tendencies	415
13	Floral Diagrams and Major Angiosperm Groups	418
13.1	Basal Angiosperms, Monocots and Early Diverging Eudicots	418
13.2	Pentapetalae	423
14	Outlook	432
	<i>Glossary</i>	434
	<i>References</i>	446
	<i>Index</i>	498
