<i>Preface</i>	<i>page</i> xiii
<b>1 Introduction</b>	1
1.1 Growth of Recording Networks	2
1.2 Theoretical and Computational Developments	5
1.3 Structure of the Book	8
PART I: BUILDING THE SEISMIC WAVEFIELD	11
<b>2 Stratified Media</b>	13
2.1 From Normal Modes to Seismograms	13
2.1.1 Normal Modes	14
2.1.2 Modal Sum	14
2.1.3 Character of Modal Spectrum	16
2.1.4 From Sum to Integral	18
2.2 Extraction of Surface Waves and Body Waves	21
2.3 Description of Physical Processes	23
2.3.1 Reflection and Transmission Matrices	23
2.3.2 Inclusion of a Source	25
2.3.3 Multiple Deep Reflections	28
2.4 Teleseismic Phases at a Receiver	29
2.5 Surface-Wave Contributions	32
<b>3 Laterally Varying Media</b>	35
3.1 Convolutions and Correlations	35
3.2 Integral Representations	36
3.2.1 Representation Theorems	37
3.2.2 Effect of Unmodelled Structure	39
3.2.3 Propagation Invariants	40
3.3 Reflection and Transmission Operators	41
3.3.1 A Single Interface	41
3.3.2 The Effect of a Heterogeneous Region	46
3.3.3 Free-Surface Reflections	52
3.3.4 Operator Representations for the Full Wavefield	52
	vii

3.3.5	Effective Sources	54
3.4	Body-Wave Approximations	55
3.4.1	Coupled Wavenumbers	55
3.4.2	Modified Ray Theory	56
3.4.3	Interfaces	56
3.5	Surface Waves in Varying Media	57
3.5.1	Smoothly Varying Structure	58
3.5.2	Propagation Across Structural Boundaries	60
<b>4</b>	<b>The Reflection Field</b>	<b>63</b>
4.1	General Representations	63
4.2	Land Seismic Profiling	64
4.3	Marine Seismic Profiling	68
4.3.1	Marine Sources	68
4.3.2	Marine Recording	69
4.3.3	Representation of Marine Records	70
4.3.4	Influence of Sea Bed Structure	71
4.3.5	Stacking below the Sea Bed	76
4.4	Influences on Amplitudes	78
4.5	Structural Challenges	81
4.6	Processing and Migration	83
4.6.1	Reflection Processing	83
4.6.2	Migration and Inversion	85
4.6.3	Remapping Reflectivity	90
	PART II: CORRELATION WAVEFIELDS	95
<b>5</b>	<b>Correlations and Transfer Functions</b>	<b>97</b>
5.1	Correlations for Time and Phase Delay	97
5.1.1	Cross-Correlation for Time Shifts	98
5.1.2	Adaptive Stacking	101
5.1.3	Surface-Wave Dispersion	104
5.2	Receiver Functions and Transfer Functions	108
5.2.1	Receiver Functions	109
5.2.2	Seismogram Transfer Functions	116
5.3	Comparison of Seismograms	119
5.3.1	General Considerations	120
5.3.2	Time and Frequency Response	121
5.3.3	Use of Transfer Functions	123
<b>6</b>	<b>Correlations and Interferometry</b>	<b>129</b>
6.1	Correlation of Seismic Signals	129
6.1.1	Modal Contributions	135
6.1.2	Body Waves	136
6.2	The Nature of the Correlation Wavefield	139
6.3	Generalised Interferometry	142

<i>Contents</i>	ix
6.3.1 Effective theory for modelling inter-station correlations	143
6.3.2 Illustrative Examples	148
6.A Appendix: Generalised ray amplitudes	155
<b>7 Correlations and Ambient Noise</b>	<b>157</b>
7.1 Nature of Ambient Noise Field	157
7.2 Exploitation of Ambient Noise Correlation	159
7.3 Extraction of Surface Waves	162
7.3.1 Local Properties of the Correlation Field	168
7.3.2 Correlations of Correlogram Coda	170
7.3.3 Cross-Correlation of Correlograms	170
7.4 Body Waves in the Ambient Field	173
7.4.1 Studies of Local Structure	173
7.4.2 Regional Studies	174
7.4.3 Global Body Wave Propagation	175
<b>8 Coda Correlations</b>	<b>179</b>
8.1 Constructing Earth's Correlation Wavefield	179
8.2 Understanding the Nature of the Correlation Field	186
8.2.1 Emergence of Complex Phases	186
8.2.2 Steeply Travelling Normal Modes	189
8.3 Exploitation of Coda Correlations in Deep Earth Studies	191
8.3.1 Targeted Seismic Phases	191
8.3.2 Exploitation of the Global Correlation Field	193
8.4 Local Structure from Teleseismic coda	195
8.A Appendix: Asymptotic normal modes	197
<b>9 Correlations in Receiver Studies</b>	<b>200</b>
9.1 Correlations and Receiver Response	200
9.1.1 General Development	201
9.1.2 Behaviour with Slowness	202
9.2 Receiver-Based Studies	204
9.2.1 Exploitation of Continuous Data	204
9.2.2 Extraction of the Reflection Field from Teleseisms	207
9.2.3 Virtual Seismic Sounding	210
9.3 Imaging with Auto-correlation	211
9.4 Correlations in the Reflection Field	216
PART III: INTERACTION OF SEISMIC WAVES WITH HETEROGENEITY	219
<b>10 Deterministic and Stochastic Heterogeneity</b>	<b>221</b>
10.1 Heterogeneity in the Earth	222
10.2 Tomography and Beyond: Multi-Scale Structure	229
10.3 Stochastic Representation of Heterogeneity	233
10.3.1 Stochastic Models and Properties	234
10.3.2 Comparison of Spatial and Ensemble Averaging	238
10.4 Effective Media – a Macroscopic View of Heterogeneity	243

10.4.1	The Upscaling Concept	244
10.4.2	Numerical Examples	249
<b>11</b>	<b>The Effects of Heterogeneity</b>	<b>255</b>
11.1	Reference Structures and Heterogeneity	255
11.1.1	Deviations from a Reference Structure	256
11.1.2	A Heterogeneity Series	258
11.1.3	Variation of the Green's Function with Model Parameters	259
11.1.4	Perturbations of Reflection Operators	260
11.2	Coupling of Modal Fields by Heterogeneity	263
11.2.1	2-D Propagation	263
11.2.2	3-D Propagation	270
11.2.3	Attenuation	272
11.3	Interactions of Complex Seismic Wavefields	274
<b>12</b>	<b>Scattering and Stochastic Waveguides</b>	<b>277</b>
12.1	Characterising Scattering	277
12.1.1	Nature of Seismograms	279
12.1.2	Modelling Scattering	280
12.2	Scattering in the Earth	281
12.2.1	Scattering and Coda	283
12.2.2	Mantle Scattering	287
12.2.3	Core Scattering	290
12.3	2-D and 3-D Scattering Wavefields	291
12.3.1	Heterogeneous Model	291
12.3.2	Simulation Results	292
12.4	Stochastic Waveguides	295
12.4.1	Subduction Zones	296
12.4.2	Lithospheric Waveguides	301
<b>13</b>	<b>Multi-Scale Heterogeneity</b>	<b>307</b>
13.1	Capturing Multi-Scale Structure	308
13.2	Oceanic Lithosphere	312
13.3	Continental Lithosphere	319
13.4	The Subduction-Zone Environment	329
PART IV: INVERSION FOR EARTH STRUCTURE		335
<b>14</b>	<b>Inference for Structure</b>	<b>337</b>
14.1	Bayesian Framework	338
14.1.1	Data and Models	338
14.1.2	Application of Bayes' Theorem	340
14.1.3	Bayesian Inference via Monte Carlo Techniques	341
14.2	Linear and Linearizable Problems	342
14.2.1	The Least-Squares Solution	342
14.2.2	Model and Data Resolution	345
14.3	Nonlinear Inversion and Optimisation Methods	350

<i>Contents</i>	xi
14.A Appendix: Covariance matrix identities	353
<b>15 Gradient Methods for Nonlinear Inversion</b>	<b>355</b>
15.1 General Descent Methods	356
15.2 The Method of Steepest Descent	358
15.3 Newton's Method and its Variants	360
15.4 The Conjugate-Gradient Method	362
15.5 Quasi-Newton Methods	365
15.6 Subspace Methods	371
15.7 No Free Lunch	374
<b>16 Adjoint Methods and Sensitivity Analysis</b>	<b>378</b>
16.1 Properties of Adjoint	378
16.1.1 The Adjoint of the Viscoelastic Wave Equation	381
16.1.2 Fréchet Kernels and Gradients	384
16.1.3 Born Approximation and Physics of Fréchet Kernels	386
16.1.4 Fréchet Derivatives of Green's Functions	388
16.2 Derivatives with Respect to Source Parameters	389
16.3 Misfit Functionals and Sensitivity Analysis	390
16.3.1 $L_2$ Waveform Misfit	391
16.3.2 Cross-Correlation Time Shifts	392
16.3.3 Amplitude Misfits	394
16.3.4 Whole-Earth Kernel Gallery	395
<b>17 Waveform Inversion of Event Data</b>	<b>398</b>
17.1 Data and Measurements	399
17.1.1 Selection of Earthquake Data	399
17.1.2 Numerical Waveform Modelling	399
17.1.3 Initial Model	400
17.2 Nonlinear Optimisation of Waveform Misfit	401
17.3 Model Quality	407
17.3.1 Validation and Analysis of Waveform Fit	407
17.3.2 Recovery Tests	408
17.4 Practical and Computational Aspects	410
17.4.1 Automation	410
17.4.2 Storage Requirements	411
17.4.3 Extracting Additional Parameters	411
<b>18 Waveform Inversion of Correlation Data</b>	<b>413</b>
18.1 Modelling and Inverting the Correlation Wavefield	413
18.1.1 Forward Modelling	414
18.1.2 Inversion for noise sources and Earth structure	415
18.2 Joint Inversion of Seismic Hum	419
18.2.1 Data and Measurements	420
18.2.2 Computational Aspects	423
18.2.3 Source and Structural Models	424

xii	<i>Contents</i>
<b>19</b>	<b>New Directions</b> 428
19.1	Multi-Scale Nested Inversion 429
19.1.1	Evolutionary Multi-Scale Updating 430
19.1.2	Pragmatic Simplifications 431
19.1.3	The Collaborative Seismic Earth Model 433
19.2	Wavefield-Adapted Numerical Meshes 435
19.2.1	Forward Modelling 436
19.2.2	Adjoint Modelling 438
19.2.3	Waveform Inversion 440
19.2.4	Towards Real-Data Applications 441
19.3	Data Redundancy and Parsimonious Inversion 442
19.3.1	Adaptive Mini-Batch Optimisation 443
19.3.2	Synthetic and Real Data Illustrations 445
19.4	Hamiltonian Nullspace Shuttles and Monte Carlo Inversion 447
19.4.1	Nullspace Shuttles 447
19.4.2	Hamiltonian Monte Carlo Methods 452
	<i>Appendix: Table of Notation</i> 456
	<i>Bibliography</i> 462
	<i>Index</i> 483
