1	Introduction	<i>page</i> 1
1.1	The Kervaire Invariant Theorem and the Ingredients of Its Proof	1
1.2	Background and History	6
1.3	The Foundational Material in This Book	17
1.4	Highlights of Later Chapters	24
1.5	Acknowledgments	48
	PART ONE THE CATEGORICAL TOOL BOX	49
2	Some Categorical Tools	51
2.1	Basic Definitions and Notational Conventions	53
2.2	Natural Transformations, Adjoint Functors and Monads	72
2.3	Limits and Colimits as Adjoint Functors	91
2.4	Ends and Coends	119
2.5	Kan Extensions	129
2.6	Monoidal and Symmetric Monoidal Categories	134
2.7	2-Categories and Beyond	156
2.8	Grothendieck Fibrations and Opfibrations	161
2.9	Indexed Monoidal Products	164
3	Enriched Category Theory	190
3.1	Basic Definitions	191
3.2	Limits, Colimits, Ends and Coends in Enriched Categories	209
3.3	The Day Convolution	221
3.4	Simplicial Sets and Simplicial Spaces	228
3.5	The Homotopy Extension Property, h -Cofibrations and Nondegenerate Base Points	234
4	Quillen's Theory of Model Categories	244
4.1	Basic Definitions	246
4.2	Three Classical Examples of Model Categories	256
4.3	Homotopy in a Model Category	263

viii	<i>Contents</i>	
4.4	Nonhomotopical and Derived Functors	269
4.5	Quillen Functors and Quillen Equivalences	272
4.6	The Suspension and Loop Functors	278
4.7	Fiber and Cofiber Sequences	284
4.8	The Small Object Argument	288
5	Model Category Theory since Quillen	294
5.1	Homotopical Categories	299
5.2	Cofibrantly and Compactly Generated Model Categories	308
5.3	Proper Model Categories	320
5.4	The Category of Functors from a Small Category to a Cofibrantly Generated Model Category	321
5.5	Monoidal Model Categories	335
5.6	Enriched Model Categories	350
5.7	Stable and Exactly Stable Model Categories	366
5.8	Homotopy Limits and Colimits	371
6	Bousfield Localization	391
6.1	It's All about Fibrant Replacement	393
6.2	Bousfield Localization in More General Model Categories	395
6.3	When Is Left Bousfield Localization Possible?	403
	PART TWO SETTING UP EQUIVARIANT STABLE HOMOTOPY THEORY	409
7	Spectra and Stable Homotopy Theory	411
7.1	Hovey's Generalization of Spectra	422
7.2	The Functorial Approach to Spectra	432
7.3	Stabilization and Model Structures for Hovey Spectra	453
7.4	Stabilization and Model Structures for Smashable Spectra	474
8	Equivariant Homotopy Theory	495
8.1	Finite G -Sets and the Burnside Ring of a Finite Group	504
8.2	Mackey Functors	510
8.3	Some Formal Properties of G -Spaces	519
8.4	G -CW Complexes	528
8.5	The Homology of a G -CW Complex	531
8.6	Model Structures	538
8.7	Some Universal Spaces	547
8.8	Elmendorf's Theorem	549
8.9	Orthogonal Representations of G and Related Structures	551
9	Orthogonal G-Spectra	566
9.1	Categorical Properties of Orthogonal G -Spectra	568
9.2	Model Structures for Orthogonal G -Spectra	584

<i>Contents</i>		ix
9.3	Naive and Genuine G -Spectra	590
9.4	Homotopical Properties of G -Spectra	599
9.5	A Homotopical Approximation to the Category of G -Spectra	608
9.6	Homotopical Properties of Indexed Wedges and Indexed Smash Products	615
9.7	The Norm Functor	617
9.8	Change of Group and Smash Product	622
9.9	The $RO(G)$ -Graded Homotopy of HZ	624
9.10	Fixed Point Spectra	639
9.11	Geometric Fixed Points	643
10	Multiplicative Properties of G-Spectra	663
10.1	Equivariant T -Diagrams	665
10.2	Indexed Smash Products and Cofibrations	666
10.3	The Arrow Category and Indexed Corner Maps	670
10.4	Indexed Smash Products and Trivial Cofibrations	671
10.5	Indexed Symmetric Powers	674
10.6	Iterated Indexed Symmetric Powers	684
10.7	Commutative Algebras in the Category of G -Spectra	687
10.8	R -Modules in the Category of Spectra	690
10.9	Indexed Smash Products of Commutative Rings	694
10.10	Twisted Monoid Rings	703
	PART THREE PROVING THE KERVAIRE INVARIANT THEOREM	711
11	The Slice Filtration and Slice Spectral Sequence	713
11.1	The Filtration behind the Spectral Sequence	714
11.2	The Slice Spectral Sequence	731
11.3	Spherical Slices	739
11.4	The Slice Tower, Symmetric Powers and the Norm	744
12	The Construction and Properties of $MU_{\mathbf{R}}$	750
12.1	Real and Complex Spectra	752
12.2	The Real Bordism Spectrum	761
12.3	Algebra Generators for $\pi_*^u MU^{((G))}$	772
12.4	The Slice Structure of $MU^{((G))}$	777
13	The Proofs of the Gap, Periodicity and Detection Theorems	793
13.1	A Warm-Up: The Slice Spectral Sequence for $MU_{\mathbf{R}}$	794
13.2	The Gap Theorem	799
13.3	The Periodicity Theorem	801
13.4	The Detection Theorem	817
