	<i>Preface</i>	<i>page xi</i>
	<i>Acknowledgments</i>	xv
	<i>Glossary</i>	xvii
1	Vibrations Destroying Human–Machine Systems Inside and Outside	1
	1.1 Introduction	1
	1.2 Vibrations and Vibration Protection in High-Speed Train Systems	4
	1.2.1 The Limits of Transport Infra-frequency Vibrations: Quality Criteria for Vibration Protection Systems	4
	1.2.2 Vibration Exposure Affecting Humans Inside and Outside a High-Speed Train	6
	1.3 Vibrations and Vibration Protection in Helicopters	14
	1.3.1 Dangerous Vibrations Generated by Mechanical Systems of a Helicopter	14
	1.3.2 Efficiency of Vibration Protection Technologies in Helicopters	15
	1.4 Vibrations and Vibration Protection in Transport Land Vehicles and Automotive Construction Equipment	17
	1.4.1 Vibrations in Land Vehicles and Construction Equipment	17
	1.4.2 Efficiency of Existing Vibration Protection Systems in Vehicles	18
	1.5 Conclusions	20
	References	22
2	Vibration Protection Systems with Negative and Quasi-Zero Stiffness: Developmental Trends and Theory Baseline	25
	2.1 Introduction	25
	2.2 Advances in Development and Use of Vibration Protection Mechanisms with Negative and Quasi-Zero Stiffness in Small	27
	2.2.1 Classification of Most Viable Structures and Mechanisms	27
	2.2.2 Performance of Mechanisms with Negative and Quasi-Zero Stiffness in Small	32
	2.2.3 An Experience in Development and Use of Vibration Protection Mechanisms with Negative and Quasi-Zero Stiffness in Small for Transport Vehicles	34

2.3	Some Theoretical Generalities for Designing Mechanisms with Negative and Quasi-Zero Stiffness in Small	36
2.3.1	Link Mechanisms	37
2.3.2	Cam Mechanisms	38
2.3.3	Electromagnetic Mechanisms	39
2.4	A Generic Model of Parametric Elements That Can Reveal the Negative and Quasi-Zero Stiffness in Large	40
2.4.1	Problem Definition	40
2.4.2	Solving the Problem	43
2.5	Conclusions	49
	References	50
3	Modeling of Elastic Postbuckling in Large and Dimensioning the Mechanisms with Negative Stiffness	52
3.1	Introduction	52
3.2	Postbuckling in Large of Thin-Walled Structures	52
3.2.1	Geometrically Nonlinear Deformation of Elastic Thin-Walled Structures	52
3.2.2	Iterative Procedure for Problem Solving	56
3.2.3	Equation Formulation	57
3.3	Designing the Mechanisms with Parametric (Elastic) Elements of Negative Stiffness in Large	62
3.3.1	A Finite Element Model of the Parametric Elements	62
3.3.2	Procedure for Designing the Mechanisms with Parametric Elements of Negative Stiffness in Large	66
3.4	Sensitivity of Mechanism Performance to Dimension Change	71
3.5	Examples of Dimensioning the Mechanisms with Negative Stiffness	77
3.5.1	Mechanisms for a Seat Suspension	77
3.5.2	Mechanisms for a Cabin Mounting of a Heavy Truck	79
3.5.3	Mechanisms for a Vibration-Isolating Table Supporting a Vibration-Sensitive Measuring Instrument	80
3.6	Conclusions	81
	References	82
4	The Type and Number Synthesis of Function-Generating Mechanisms	85
4.1	Introduction	85
4.2	Methods of Structural Design of Function-Generating Mechanisms	86
4.3	Structural Sources of Performance Failures of the Mechanisms	89
4.3.1	“Elemental” Level of Performance Degradation	90
4.3.2	“Subsystem” Level of Performance Degradation	92
4.3.3	“System” Level of Performance Degradation	93
4.4	Method of Structural Design of Redundant Mechanisms with Parametric Elements of Negative Stiffness	93

	4.4.1 A General Theory	95
	4.4.2 Entering the Redundancy of Different Levels	96
	4.4.3 Optimally Structured Function-Generating Mechanisms with Redundant Kinematic Chains	99
	4.5 Methods of Structural Design of Function-Generating Mechanisms for Vibration Protection Systems of Humans and Engineering	101
	4.5.1 Structural Design of Function-Generating Mechanisms for Human Operator Vibration Protection Systems	102
	4.5.2 Structural Design of Function-Generating Mechanisms for Technical Vibration Protection Systems	108
	4.6 Conclusions	113
	References	114
5	Dynamics of Systems with Sign-Changing Stiffness: Chaotic Vibration Motion and Stability Conditions	116
	5.1 Introduction	116
	5.2 Methods of Detecting and Measuring Chaos	117
	5.2.1 Qualitative Methods	117
	5.2.2 Quantitative Methods	122
	5.3 Selection of Systems with Negative Stiffness	126
	5.3.1 Stability of Mechanisms with Negative Stiffness of the First Type	128
	5.3.2 Stability of Mechanisms with Negative Stiffness of the Second Type	131
	5.4 Conditions of Stable Motion of the Active Suspensions with Redundant Mechanisms of Negative Stiffness	133
	5.5 Conclusions	142
	References	142
6	Dynamics of Systems with Sign-Changing Stiffness: Damping Control	145
	6.1 Introduction	145
	6.2 Structural Damping in Springs with Negative Stiffness	146
	6.3 Critical Damping in Function-Generating Mechanisms	153
	6.4 Limiting Efficiency of Vibration Protection Systems with Small Stiffness due to Slip Damping	160
	6.5 Experimental Proof and Discussion of Practical Payoffs	161
	6.5.1 Comparative Assessment and Minimization of Structural Damping	162
	6.5.2 Minimization of Slip Damping	164
	6.5.3 Minimization of Damping in Active Suspensions with Redundant Mechanisms of Negative Stiffness	166
	6.6 Conclusions	169
	References	170

7	Dynamics of Systems with Sign-Changing Stiffness: Features of Active Parametric and Motion Control	172
	7.1 Introduction	172
	7.2 Control Object	174
	7.3 Parameter Control	175
	7.3.1 Stiffness Control	175
	7.3.2 Damping Control	177
	7.4 Equation Formulation	178
	7.5 Simulated Results	181
	7.5.1 A Range of Stiffness Minima	181
	7.5.2 Variable Structure of Air Damping and Criteria of Stability in a Transient	185
	7.6 Control Algorithms	188
	7.6.1 Position Control within the Range of a Reference Height	189
	7.6.2 Controlling the Reference Position of the Object Protected	190
	7.6.3 Adaptive Control (Invariant Control)	191
	7.6.4 Stabilization: A Mix of Feedback Control and Invariant Control	191
	7.7 Simulating and Control Equipment	192
	7.7.1 Organization of an Electric-Pneumatic Control System	192
	7.7.2 Measurement of the Vibrations and Impulsive Responses	194
	7.8 Conclusions	196
	References	197
8	Methods of Experimental Study of Vibration Protection Systems with Negative and Quasi-Zero Stiffness	201
	8.1 Introduction	201
	8.2 Statics	202
	8.2.1 Goal and Objectives of the Experiments	202
	8.2.2 Measurands	202
	8.2.3 Test Equipment: Measuring Analysis	203
	8.2.4 Designing the Force-Displacement Characteristics for the Systems with Different Types of Parametric (Elastic) Elements	206
	8.2.5 Strain State Analysis of Parametric and Structural Elements of Redundant Mechanisms with Negative Stiffness	217
	8.3 Dynamics	220
	8.3.1 Goal and Objectives of the Experiments	220
	8.3.2 Instrumentation Complex for Vibration Testing	220
	8.3.3 Measurands	226
	8.3.4 Quality Criteria for Designed Vibration Protection Systems	227
	8.3.5 Results and Discussion on Dynamics of Designed Vibration Protection Systems	228

	8.4 Conclusions	235
	References	236
9	In Harmony with Conventional Vibration Protection Systems	238
	9.1 Introduction	238
	9.2 Selection of Parametric (Elastic) Elements with a Given Load Capacity	238
	9.2.1 A Classification of Parametric Elements with Positive Stiffness	238
	9.2.2 “Direct” Methods to Soft a Vibration Protection System	243
	9.2.3 A Concept of Vibration Protection with No Elastic Elements	245
	9.3 Effectiveness of External Damping Mechanisms in Pneumatic Suspensions	248
	9.3.1 Elements to Avoid the End-Stop Impact	248
	9.3.2 Comparison of Efficiency Using Passive, Semiactive, and Active Dampers	250
	9.4 Transmission to Provide Harmonious Operation of the Mechanisms with Negative and Quasi-Zero Stiffness in a Vibration Protection System	252
	9.4.1 Gears for Joining Mechanisms with Negative Stiffness to the Vibration Protection Systems	253
	9.4.2 Mini-Gears for Pre-adjusting Active Vibration Protection Systems with Quasi-Zero Stiffness	255
	9.5 Conclusions	259
	References	260
10	Development and Use of Vibration Protection Systems with Negative and Quasi-Zero Stiffness: Practice and Prospects	264
	10.1 Introduction	264
	10.2 Preparing for Measuring Vibration and Testing Systems in the Field	264
	10.2.1 Arrangements of Suspensions with Small Stiffness and Damping	264
	10.2.2 Vibration Measurement Procedures and Instruments in the Field	266
	10.3 Experiments and Practical Uses in Unuspended Machines	269
	10.3.1 Agricultural Machines	269
	10.3.2 Construction Equipment	270
	10.3.3 Helicopters	273
	10.4 Experiments, Practical Uses, and Prospects in Suspended Machines	275
	10.4.1 Buses and Heavy Trucks	276
	10.4.2 High-Speed Railroad Rolling Stock and Infrastructural Objects	277
	10.5 Conclusions	283

10.6 Afterword	285
10.6.1 Motivation	285
10.6.2 A Prediction for the Development of Next-Generation Systems with Negative and Quasi-Zero Stiffness	285
10.6.3 An Experimental Validation	288
References	291
