<i>Preface</i>	<i>page</i> xi
<i>Acknowledgments</i>	xv
1 LOGIC AND DATA ANALYSIS	1
1.1 The Logic of Inference	5
1.1.1 Deductive Inference and Rational Belief Networks	5
1.1.2 Plausible Inference	7
1.1.3 Uncertainty	13
1.1.4 The Logic of Data Analysis	16
1.2 Data Visualization	22
1.2.1 The Goal of Data Visualization	24
1.2.2 Histograms	25
1.2.3 Scatterplots	32
1.2.4 Descriptive Statistics	35
1.2.5 Data Checks: Expected versus Unexpected Data Values and Patterns	42
1.3 Summary	47
1.3.1 Emphasis on Worked Examples	47
1.3.2 Comment on Reality	49
1.3.3 Outline of the Text	49
2 MECHANICS OF PROBABILITY CALCULATIONS	51
2.1 Symbolic Manipulations	51
2.1.1 Formal Symbolic Operations for Logical Expressions	52
2.1.2 Intuitive Rationale behind the Basic Rules of Probability Theory	57
2.1.3 Extending the Question	61
2.1.4 Marginalization	62
2.1.5 The Five-Card Monty Hall Problem	66
2.1.6 Inverse Probability	70
2.2 Probabilities and Probability Distributions	89
2.2.1 Multiplicity Factors	89
2.2.2 Bernoulli Trials: The Binomial Distribution	92
2.2.3 Bernoulli Trials: The Negative Binomial Distribution	94
2.3 Sampling Distributions and Likelihood Functions	97
2.3.1 Constructing Likelihood Functions from Sampling Distributions	98
2.3.2 The Optional Stopping Problem	103
2.4 Distributions Derived from Bernoulli Trials	109
2.4.1 Multinomial Distribution	109
2.4.2 Poisson Distribution	113

2.5	Summary	116
2.5.1	Marginalization: The Core of Advanced Techniques	116
2.5.2	Single Probabilities	117
2.5.3	Probability Distributions	117
2.5.4	More to Come	117
3	PROBABILITY AND INFORMATION: FROM PRIORS TO POSTERIORS	119
3.1	Probability Distributions: Definition and Characteristics	120
3.1.1	Probability and Information	120
3.2	Discrete Distributions	124
3.2.1	Uniform Distribution	124
3.2.2	Binomial Distribution	127
3.2.3	Poisson Distribution	129
3.3	Continuous Distributions	131
3.3.1	Uniform Distribution	131
3.3.2	Exponential Distribution	134
3.3.3	Gaussian Distribution	137
3.4	Assigning Prior Probabilities over Parameters	141
3.4.1	Three Types of Prior over Parameter Values	142
3.4.2	Uniform Priors	143
3.4.3	Conjugate Priors	150
3.4.4	Jeffreys Priors	156
3.4.5	Inference under Reparameterization	158
3.5	Updating Information Based on Data: The Effect of Prior Information	163
3.6	Summary	179
3.6.1	Prior Paralysis: Don't Be a Victim	179
3.6.2	Comparison to the Frequentist Algorithm	179
3.6.3	What's Next?	180
4	PREDICTION AND DECISION	182
4.1	Predictive Sampling Distributions	184
4.1.1	Prior Predictive	186
4.1.2	Posterior Predictive	195
4.2	Prediction in Time-Varying Systems	202
4.2.1	Optimal State Estimation	205
4.2.2	Range Effects	210
4.3	Decision	220
4.3.1	The Mathematics of Decision Theory	221
4.3.2	Decision and Measurement	231
4.3.3	Clinically Relevant Differences	246
4.4	Summary	253
4.4.1	Integrating Basic Measurement and Predictive Distributions	253
4.4.2	Decision theory Is everywhere	254
5	MODELS AND MEASUREMENTS	257
5.1	Observables, Models, and Measurements	259
5.1.1	Measurement and Uncertainty	259

CONTENTS

ix

5.1.2	Data versus Parameter Coordinates	264
5.1.3	Graphical Models	269
5.2	The Measurement Algorithm	277
5.2.1	Logic	277
5.2.2	The Algorithm	278
5.3	Single-Source Measurements	283
5.3.1	Transparent Measurement	283
5.3.2	Rate Measurement	291
5.3.3	Duration	296
5.3.4	Straight-Line Models	304
5.3.5	Binary Classification	310
5.3.6	Two-Alternative Forced-Choice	317
5.3.7	Exponential Decay	325
5.4	Multiple-Source Measurements	338
5.4.1	Central Problem of Multiple-Source Measurement	339
5.4.2	Multiple Sources: Transparent I	340
5.4.3	Multiple Sources: Transparent II	343
5.4.4	Multiple Sources: Straight-Line Model	347
5.4.5	Multiple Sources: Summary	353
5.5	Summary	354
5.5.1	Common Mistakes	355
5.5.2	Measurement: Summary	358
6	MODEL COMPARISON	359
6.1	Model Comparison Algorithm	362
6.1.1	Models and Measurement	362
6.1.2	Hypotheses and Models	364
6.1.3	Logic: General	366
6.1.4	The Algorithm	373
6.2	Occam Factor	382
6.2.1	Occam's Razor: History and Implementation	382
6.2.2	Occam Factor: Examples	385
6.3	Model Comparison	399
6.3.1	Binomial Rates	399
6.3.2	Rate Differences	405
6.3.3	Model Comparison for the Gaussian Likelihood	410
6.3.4	Straight-Line Models	425
6.4	Multiple Sources	436
6.4.1	Logic of Model Comparison with S Sources	437
6.4.2	Interrelationships among Variables: Multisource Method of Testing	453
6.5	Multiple Models	477
6.5.1	Logic of m Competing Models Revisited	477
6.6	Summary	486
6.6.1	Other Approaches to Hypothesis Testing	486
6.6.2	Pitfalls of the Frequentist Algorithm as Used in Practice	499
6.6.3	The Full Monty	504
6.6.4	Where Do We Go from Here?	505

x	CONTENTS
<i>Appendices</i>	
A	CODING BASICS 507
A.1	Add, Subtract, Multiply, Divide, Evaluate: How to Ask Arithmetic Questions 507
A.2	Assignment, Indexing, and Variable Types 508
A.3	Logical Expressions, Indexing, and Flow Control 511
A.4	Plotting 513
A.5	Functions 514
A.6	Give It a Try and See What Happens 517
B	MATHEMATICS REVIEW: LOGARITHMIC AND EXPONENTIAL FUNCTIONS 519
B.1	Overview 519
B.2	Exponential Functions 519
B.3	Logarithmic Functions 521
B.3.1	Computing Logarithmic Functions 521
B.3.2	Uses of Logarithmic Functions 524
B.3.3	*Marginalization and the Logsum Problem 525
C	THE BAYESIAN TOOLBOX: MARGINALIZATION AND COORDINATE TRANSFORMATION 528
C.1	Probability Mass Functions versus Probability Density Functions 528
C.1.1	Unity Probability Mass 529
C.1.2	Limitless Possibilities 530
C.1.3	Area under the Curve 532
C.1.4	Sequences of Areas: Discretization 535
C.1.5	Approximate Marginalization of Probability Densities 541
C.2	Coordinate Transforms 543
C.2.1	Linking Functions for Coordinate Transformation 544
C.2.2	Transforming Probability Mass Functions 546
C.2.3	Approximate Transformation of Probability Densities 557
C.2.4	Calculus-Based Methods for Coordinate Transformation 575
C.2.5	Summary 579
