Preface *page* xiii

1 Acoustics and the Wave Equation 1

1.1 Governing Equations 1
1.1.1 Linearisation: Ambient Flows 2
1.1.2 Linearisation: Acoustics 3
1.1.3 Zero Ambient Velocity: Bergmann's Equation 4
1.1.4 Zero Ambient Velocity and Constant Ambient Density 4
1.1.5 Zero Ambient Velocity and Homogeneous Fluid 5
1.1.6 Non-Zero Ambient Velocity and Homogeneous Fluid 5
1.1.7 Non-Uniform Ambient Flows and Dynamic Materials 6
1.1.8 Nonlinear Acoustics 10
1.2 Acoustic Scattering 10
1.3 Waves on a String 11
1.3.1 An Initial-Value Problem 13
1.3.2 A Bead on an Infinite String: Solution for All t 13
1.3.3 A Bead on an Infinite String: Initial-Value Problem 15
1.3.4 A Simple Initial-Boundary Value Problem 16
1.3.5 A Bead on an Infinite String: Use of Laplace Transforms 17
1.3.6 Discussion and Summary 18
1.3.7 Damping, Dissipation, Absorption and Losses 18
1.3.8 The Forced Wave Equation 20
1.4 Laplace Transforms: Formal Properties 21
1.5 Causality 22
1.6 Electromagnetics, Elastodynamics and Hydrodynamics 24
1.6.1 Electromagnetics 24
1.6.2 Elastodynamics 25
1.6.3 Hydrodynamics 26
1.7 Overview of the Book 27

Table of Contents
More Information

2 Wavefunctions 29
2.1 Simple Solutions 29
2.1.1 Plane Waves 29
2.1.2 Spherical Polar Coordinates 30
2.1.3 Spherically Symmetric Wavefunctions 30
2.2 The Time-Domain Far-Field Pattern 32
2.3 Use of Spherical Harmonics 33
2.3.1 Separated Solutions 34
2.3.2 Similarity Solutions 35
2.3.3 Smirnov's Representation 37
2.3.4 A Bateman-Like Wavefunction 38
2.3.5 Multipole Representation 39
2.3.6 Lamb, Grote and Keller 40
2.3.7 Changing the Independent Variables 41
2.4 Harry Bateman and the Wave Equation 44
2.4.1 Integral Representations 45
2.4.2 Transformations Similar to Kelvin Inversion 47
2.4.3 Some Two-Dimensional Wavefunctions 49
2.4.4 Further Transformations 50
2.5 Spheroidal Wavefunctions 52
2.5.1 Spheroidal Wave Equation 53
2.5.2 Angular Spheroidal Wavefunctions 54
2.5.3 Radial Spheroidal Wavefunctions 54
2.5.4 Summary 55
2.6 Moving Sources 55

3 Characteristics and Discontinuities 58
3.1 Characteristics 58
3.2 The Eikonal Equations 61
3.3 Discontinuous Solutions 62
3.4 Weak Solutions and Discontinuities 64
3.4.1 Green's Formula 64
3.4.2 Weak Solutions of the Wave Equation 65
3.4.3 Discontinuous Weak Solutions 66
3.5 Jump Relations in Continuum Mechanics 68

4 Initial-Boundary Value Problems 71
4.1 Formulation of IBVPs 71
4.2 Acoustic Energy 73
4.2.1 Energy Conservation 73
4.2.2 Energy Inequality 74
4.2.3 Energy Decay 76
4.3 Incident Sound Pulses 77
4.4 Compatibility Conditions 78

Table of Contents
More Information

4.5 Bateman's IBVP for a Sphere 79
4.6 Further Problems and Boundary Conditions 80
4.6.1 Locally Reacting Surfaces 80
4.6.2 Transmission Problems 81
4.6.3 Membrane Problems 82
4.6.4 Elastic Shells 82
4.6.5 Hydrodynamic Problems 84
4.7 The Forced Wave Equation 84
4.7.1 Forward Problem 85
4.7.2 The Limiting Amplitude Principle 86
4.7.3 Aerodynamic Sound 87
4.7.4 Inverse Source Problems 87
4.8 Existence and Uniqueness Results 88
4.8.1 Function Spaces and Notation 89
4.8.2 Problem DI_0 91
4.8.3 Problem NI_0 92
4.8.4 Summary 93

5 Use of Laplace Transforms 94
5.1 Formal Treatment 94
5.2 Laplace Transform of Discontinuous Functions 95
5.3 Laplace Transform of Wavefunctions 96
5.4 Laplace Transform of Boundary Conditions 96
5.5 Synthesis 97
5.6 Fourier Transforms 97
5.6.1 Basic Definitions and Strategy 98
5.6.2 A Time-Domain Radiation Condition 99
5.6.3 Further Remarks 99
5.7 Laguerre Transforms 100

6 Problems with Spherical Symmetry 102
6.1 Use of Simple Sources 102
6.1.1 Dirichlet Boundary Condition 104
6.1.2 Pressure Boundary Condition 104
6.1.3 Neumann Boundary Condition 105
6.1.4 Discussion and Special Cases 107
6.2 Use of Laplace Transforms 108
6.2.1 Dirichlet Boundary Condition 109
6.2.2 Pressure Boundary Condition 110
6.2.3 Neumann Boundary Condition 110

7 Scattering by a Sphere 112
7.1 Preliminaries 112
7.2 Use of Laplace Transforms 113
7.2.1 Dirichlet Boundary Condition 113

Table of Contents
More Information

7.2.2 Pressure Boundary Condition 118
7.2.3 Neumann Boundary Condition 118
7.2.4 Literature 119
7.3 Residual Potential Methods, Nonreflecting Boundary Kernels and Dirichlet-to-Neumann Mappings 120
7.4 Application of the Similarity Representation 121
7.4.1 Dirichlet Boundary Condition 122
7.4.2 Pressure Boundary Condition 124
7.4.3 Neumann Boundary Condition 124
7.5 Moving Spheres 125
7.6 Scattering by a Spheroid 128

8 Scattering Frequencies and the Singularity Expansion Method 131
8.1 Fourier Transforms 131
8.2 Scattering Frequencies 132
8.3 Boundary Integral Equations 133
8.4 Generalised Eigenfunctions; Quasinormal Modes 135
8.5 Moving the Inversion Contour 136
8.6 The Singularity Expansion Method (SEM) 137
8.7 The Eigenmode Expansion Method (EEM) 139
8.7.1 Self-Adjoint Operators and Normal Operators 139
8.7.2 The Time-Harmonic Single-Layer Operator 140
8.7.3 Singular Value Decomposition (SVD) 140
8.7.4 The Eigenmode Expansion Method (EEM) 141

9 Integral Representations 143
9.1 Kirchhoff's Formula: Classical Derivations 143
9.1.1 Kirchhoff's Formula for Bounded Domains 144
9.1.2 Kirchhoff's Formula for Exterior Domains 146
9.1.3 Special Cases of Kirchhoff's Formula 147
9.1.4 A Formula for the Pressure 148
9.1.5 Use of Laplace Transforms 148
9.1.6 Weakening the Smoothness Assumptions 149
9.1.7 Literature 149
9.2 Kirchhoff's Formula: a Space-Time Derivation 150
9.3 Kirchhoff's Formula: Use of Generalised Functions 151
9.3.1 Fixed Surface S 153
9.3.2 Moving Surface $S(t)$ 154
9.4 Layer Potentials 156
9.4.1 Single-Layer Potential 156
9.4.2 Double-Layer Potential 158
9.4.3 Notation and Definitions 159
9.4.4 Kirchhoff's Formula 159

Table of Contents
More Information

10 Integral Equations 161
10.1 Integral Equations: Indirect Method 161
10.2 Integral Equations: Direct Method 162
10.3 Integral Equations: Numerical Methods 164
10.3.1 Basic Time-Stepping Method 164
10.3.2 Instabilities and Remedies 166
10.4 Convolution Quadrature Methods 167
10.4.1 A Volterra Integral Equation 168
10.4.2 Application to Time-Domain Boundary Integral Equations 170
10.4.3 Application to Scattering by a Sphere 171
10.4.4 An Alternative View of CQMs 172
10.5 Electromagnetics 174
10.6 Elastodynamics 176
10.7 Hydrodynamics 179
10.7.1 Clément's Equation 180
10.8 Method of Fundamental Solutions (MFS, ESM) 181
10.9 Use of Fourier Transforms 183
10.10 Cracks, Screens and Other Thin Scatterers 187
10.10.1 Derivation of Integral Equations Using Fourier Transforms 188
10.10.2 Derivation of Integral Equations Using Layer Potentials 191
10.10.3 Comments and Literature 191
References 193
