

Index

- absolute magnitude (M), 13
 absorption line, 10
 rotational broadening, 10–11
 thermal broadening, 10
 accretion, 157, 297
 cold, 157
 hot, 157
 acoustic cutoff frequency (ω_{ac}), 273
 adiabatic index (γ), 77
 Alfvén radius, 252
 Algol paradox, 291
 alpha element, 17
 angular momentum transport, 239
 hydrodynamic, 239
 magnetic, 239
 wave-driven, 239
 apparent magnitude (m), 13
 asteroseismology, 255, 279
 g-modes, 269
 large separation ($\Delta\nu_*$), 275
 p-modes, 269
 small separation ($\delta\nu_{\ell, \ell+2}$), 277
 astronomical unit (au), 2
 astrophysical S-factor (S_{jk}), 94
 ${}^3\text{He}$ – ${}^3\text{He}$ reaction, 103
 proton–deuteron reaction, 101
 proton–proton reaction, 101
 asymptotic giant branch (AGB) star, 186,
 195–203, 278
 dredge-up, 204
 Mira A, 203
 atomic number (Z), 90

 Be star, 233
 Bethe–Weizsäcker cycle, *see* CNO bi-cycle
 binary star system, 282–295
 mass ratio (q), 285
 orbital period (P), 284
 binding energy per nucleon (B/A), 90
 birthline, 165, 166
 deuterium-burning, 167
 hot accretion, 167
 Bohr radius, 46, 66
 Bose–Einstein distribution, 49
 for photons, 59
 bound–free absorption, 71–73
 breakup speed (v_{BU}), 232
 bright giant (II), 16
 brown dwarf, 1, 170–171
 Luhman 16A and 16B, 170
 Brunt–Väisälä frequency (N_{BV}), 272
 buoyancy frequency, *see* Brunt–Väisälä
 frequency

 carbon burning, 114
 carbon star, 205
 R Leporis, 205
 Carnot heat engine, 264
 pulsating variable, 265
 cataclysmic variable, 296
 Chandrasekhar limit, 210, 213
 close binary, *see also* binary star system
 equipotential surfaces, 287
 mass transfer, 289
 Roche lobes, 288
 tidal circularization, 285
 CNO bi-cycle, 101, 108–111
 CN cycle, 108
 NO cycle, 108
 color index, 14
 common envelope event, 288
 companion frequency (F_c), 283

- convection, 75–82
 low-mass PMS stars, 160
 Schwarzschild criterion, 80
 convective overshoot, 86–87
 convective overturn timescale (τ_{CO}), 253
 convective zone, 75, 136
 red giant, 186
 Coulomb barrier, 91
 Cowling approximation, 269
 critical acoustic frequency, *see* Lamb frequency
- de Broglie wavelength (λ_{dB}), 92
 degeneracy pressure, 55–58
 consequences, 58
 neutron, 220
 non-relativistic ($P_{\text{deg,nr}}$), 56
 relativistic ($P_{\text{deg,rel}}$), 58
- deuterium
 binding energy, 90
 equilibrium abundance, 102
 deuterium burning, 166
 luminosity, 167
 shell, 168
 dispersion relation, 152, 259
 dredge-up, 204
 first, 187, 204
 second, 204
 third, 205
- dwarf (V), *see also* main sequence, 16
 Algol A, 290
 Alpha Centauri A and B, 11
 Altair, 234
 Lalande 21185, 16
 Proxima Centauri, 9
 Sirius A, 20
- dynamo theory, 253
- Eddington luminosity (L_{Edd}), 60, 188
 efficiency (η)
 gravitational potential, 224
 helium burning, 116
 hydrogen burning, 100
- energy transport
 conductive, 36–39
 convective, 37, 75
 radiative, 36, 39–41
- equation of state, 33, 43
 equation of stellar structure, 31–41, 119, 235–237
 boundary conditions, 120–121
 energy generation, 34
 energy transport, 40
 hydrostatic equilibrium, 33
 mass conservation, 31
 excess twin fraction ($\mathcal{F}_{\text{twin}}$), 285
- Fermi energy (E_{F}), 55
 Fermi momentum (p_{F}), 55
 Fermi–Dirac distribution, 49
 fractional ionization (x), 65
 free–free absorption, 68–71
 freefall time (t_{ff}), 32
 of molecular cloud, 148
 of Sun, 32
 of white dwarf, 224
- fundamental mode, 261
 Cepheid, 261
 vs. overtones, 261
- Gamow energy (E_{G}), 93
 Gamow peak (f_{GP}), 96, 97
 giant (III), *see also* red giant, 16
 Pollux, 20
 R Doradus, 9
- globular cluster, 26
 NGC 6397, 301
- gravity darkening, 234
 gyrochronology, 249
- Hayashi track, 163
 Heisenberg uncertainty principle, 48
 helioseismology, 240
 high- ℓ modes, 275
- helium burning
 core, 191–195
 shell, 195
- helium flash, 189–191
 Henyey track, 159
 hep reaction, 102
 Hertzsprung gap, 175
 Hertzsprung–Russell (H–R) diagram, 19, 21, 26, 139, 160, 174, 185, 187, 194, 256, 301
- homology, 126–132, 138–139
 definition, 126
- horizontal branch, 195, *see also* helium burning
- hydrogen burning
 core, *see* main sequence
 shell, 179
- ideal gas law, 50, 119
 derivation, 50–51
- initial mass function, 168–170
 Chabrier, 168
 Salpeter, 168

- instability strip, 257
 interstellar dust, 148–149
 inverse bremsstrahlung, *see* free–free absorption
 iron abundance [Fe/H], 17
 iron peak, 90, 115, 199
 isothermal fragmentation, 154–155
 isothermal sound speed (c_s), 151
- Jeans length (λ_J), 152
 Jeans mass (M_J), 152
- kappa mechanism, 266
 in Cepheids, 267
 Kelvin–Helmholtz time (t_{KH}), 35, 158
 Kraft break, 248
 Kramers’ law, 70, 217
 generalized, 70, 130, 159, 266
- Lagrangian observer, 149
 Lamb frequency (S_ℓ), 271
 Landau mass (M_L), 212
 Lane–Emden equation, 125
 Leavitt’s law, 256
 light helium (^3He), 7
 equilibrium abundance, 103
 lithium burning, 186
 local thermodynamic equilibrium (LTE), 47, 68
 luminosity class, 16
- main sequence, 16, 20, 117–118
 lifetime (t_{MS}), 23
 mass–luminosity relation, 21–22
 mass–radius relation, 23
 stellar properties, 25
 terminal age, 178
 zero age, 121, 126, 138–144
 mass continuity equation, 150, 151
 mass number (A), 90
 mass–luminosity relation, 21
 main sequence, 21–22
 mass–radius relation, 23, 132
 main sequence, 23
 neutron star, 221
 non-relativistic white dwarf, 211, 212
 mass-to-light ratio (Υ), 34
 at Eddington luminosity, 61
 of draft horse, 34
 of Sun, 34
 Maxwell–Boltzmann distribution, 50
 Maxwellian energy distribution, 54, 92
- mean molecular mass ($\bar{\mu}$), 51, 52
 in Sun’s interior, 137
 neutral vs. ionized gas, 53
 of molecular cloud, 148
 metallicity (Z), 8, 17
 metals (astronomers’ definition), 53
 Mira variable star, 203
 mixing length parameter (α_ℓ), 83
 mixing length theory, 82–86
 MK spectral class, 16–17
 molecular cloud, 147
 molecular cloud core, 147
 momentum equation, 150, 151, 258
 linearized, 258
 multiplicity fraction (F_m), 283
- neon burning, 114
 neutrino
 cooling, 190
 mean free path, 64
 solar, 106
 neutron
 capture time (t_{nc}), 200
 lifetime (τ), 90
 neutron star, 220
 general relativity, 221
 mass function, 222
 RX J1856.5–3754, 222
 strong nuclear force, 221
 non-interacting particle, 47
 nova, *see also* cataclysmic variable
 classical, 296
 dwarf, 296
 recurrent, 296
- opacity (κ), 39, 64–75
 bound–bound, 73
 bound–free, 71–73
 electron scattering, 65–68
 free–free, 68–71
