Foreword	<i>page</i> xv
Preface	xvii
Acknowledgements	xxi
1 Metaphors and Science	1
Historical Dismissal and Neglect of Metaphor by Science and Philosophy	1
What Is Metaphor?	2
The Roles of Metaphor in Science	4
The Social and Linguistic Nature of Science	8
Metaphors as Perspectives, Filters, Lenses, Tools, and Maps	9
Metaphor's Broader Impact Beyond Science	10
Miscommunication Between Scientists and Non-scientists	12
Summary	13
2 Background Metaphors: Agents, Machines, and Information	14
Agent Metaphors	14
Machine Metaphors	16
Information Metaphors	19
Language Is the Primary Tool-Box of Science	23
Exceptions to the Three Chief Background Metaphors	25
3 Genes and Genomes: Agents, Codes, Programs, Blueprints, and Books	27
Early History of the Gene Concept	28
The Molecular Biological Gene (1950s to Present): Information and Codes	31

xii CONTENTS

Blueprints and Programs	33
Critical Analysis of the Metaphors	38
4 Proteins: Machines, Messengers, and Team Players	48
A Very Brief History of Protein Research	52
Protein Machines	54
Assessing the Machine Metaphor	58
Are Proteins (and Cells) Intelligently Designed?	60
Messengers and Team Players	63
5 Cells: Factories, Computers, and Social Organisms	67
But Why Are They Called “Cells”?	68
“The Cell” Is Dead – Long Live the Cell!	70
Cells Are Chemical Laboratories or Factories	71
Genetic Engineering Turns Cells into Literal Factories	73
The Society of Cells and the Cell-State	75
Cell Suicide and Programmed Cell Death	77
The Cell as Computer	82
Stem Cells	83
Cells, Race, and Gender	84
6 Evolution: Natural Selection, the Tree of Life, and Selfish Genes	88
Evolution Is a Metaphor	90
Natural Selection	92
Survival of the Fittest	96
The Tree of Life	99
Molecular Biology Threatens to Uproot the Tree of Life	105
The Selfish Gene	109
Selfish DNA	112
Junk DNA	113
Spandrels, Functions, and Adaptation	113
Is Evolution All Just a Metaphor Then?	115
7 Ecology: The Balance of Nature, Niches, Ecosystem Health, and Gaia	117
The Economy of Nature	119
Ecology	120

	CONTENTS	xiii
Ecological Niche		121
Ecosystem		125
The Balance of Nature		126
Ecosystem Health		130
Gaia		133
8 Biomedicine: Genetic Engineering, Genome Editing, and Cell Reprogramming		139
Genetic Engineering		141
Genome Editing		143
CRISPR as Programmable Molecular Scissors		145
Cell Reprogramming		153
Rewiring Cell Circuits		156
How the Portrayal of Molecules as Agents Misleads Public Understanding of Cell and Molecular Biology		161
Concluding Remarks: What Is the Significance of Science's Reliance on Metaphor?		164
Should Scientists Avoid Using Metaphors?		165
Summary of Common Misunderstandings		168
References		171
Index		194
