<i>Preface</i>	<i>page ix</i>
<b>PART I THE ALGEBRAIC BACKGROUND</b>	
<b>1 Groups</b>	3
1.1 Groups	3
1.2 Finite Abelian Groups	9
1.3 Finite Permutation Groups	11
1.4 Group Series	17
1.5 Soluble Groups	18
1.6 $p$ -Groups and Sylow Theorems	22
<b>2 Integral Domains</b>	25
2.1 Commutative Rings with 1	25
2.2 Polynomials	26
2.3 Homomorphisms and Ideals	27
2.4 Integral Domains	29
2.5 Fields and Fractions	31
2.6 The Ordered Set of Ideals in an Integral Domain	35
2.7 Factorization	36
2.8 Unique Factorization	38
2.9 Principal Ideal Domains and Euclidean Domains	41
2.10 Polynomials Over Unique Factorization Domains	44
2.11 More About Fields	47
2.12 Kronecker's Algorithm	48
2.13 Eisenstein's Criterion	50
2.14 Localization	51

<b>3</b>	<b>Vector Spaces and Determinants</b>	54
3.1	Vector Spaces	54
3.2	The Infinite-Dimensional Case	60
3.3	Characters and Automorphisms	61
3.4	Determinants	62
<b>PART II THE THEORY OF FIELDS AND GALOIS THEORY</b>		
<b>4</b>	<b>Field Extensions</b>	69
4.1	Introduction	69
4.2	Field Extensions	70
4.3	Algebraic and Transcendental Extensions	73
4.4	Algebraic Extensions	77
4.5	Monomorphisms of Algebraic Extensions	80
<b>5</b>	<b>Ruler and Compass Constructions</b>	81
5.1	Some Classical Problems	81
5.2	Constructible Points	81
<b>6</b>	<b>Splitting Fields</b>	85
6.1	Introduction	85
6.2	Splitting Fields	86
6.3	The Extension of Monomorphisms	89
6.4	Some Examples	94
<b>7</b>	<b>Normal Extensions</b>	98
7.1	Basic Properties	98
7.2	Monomorphisms and Automorphisms	101
<b>8</b>	<b>Separability</b>	103
8.1	Basic Ideas	103
8.2	Monomorphisms and Automorphisms	104
8.3	Galois Extensions	106
8.4	Differentiation	106
8.5	Inseparable Polynomials	108
<b>9</b>	<b>The Fundamental Theorem of Galois Theory</b>	112
9.1	Field Automorphisms, Fixed Fields and Galois Groups	112
9.2	Linear Independence	113
9.3	The Size of a Galois Group is the Degree of the Extension	115
9.4	The Galois Group of a Polynomial	116
9.5	The Fundamental Theorem of Galois Theory	118

<b>10</b>	<b>The Discriminant</b>	122
10.1	The Discriminant	122
<b>11</b>	<b>Cyclotomic Polynomials and Cyclic Extensions</b>	126
11.1	Cyclotomic Polynomials	126
11.2	Irreducibility	128
11.3	The Galois Group of a Cyclotomic Polynomial	129
11.4	A Necessary Condition	131
11.5	Abel's Theorem	132
11.6	Norms and Traces	134
11.7	A Sufficient Condition	135
11.8	Kummer Extensions	137
<b>12</b>	<b>Solution by Radicals</b>	140
12.1	Polynomials with Soluble Galois Groups	140
12.2	Polynomials which are Soluble by Radicals	141
<b>13</b>	<b>Regular Polygons</b>	146
13.1	Fermat Primes and Fermat Numbers	146
13.2	Regular Polygons	147
13.3	Constructing a Regular Pentagon	148
<b>14</b>	<b>Polynomials of Low Degree</b>	149
14.1	Quadratic Polynomials	149
14.2	Cubic Polynomials	150
14.3	Quartic Polynomials	153
<b>15</b>	<b>Finite Fields</b>	156
15.1	Finite Fields	156
15.2	Polynomials in $\mathbb{Z}_p[x]$	157
15.3	Polynomials of Low Degree over a Finite Field	158
<b>16</b>	<b>Quintic Polynomials</b>	161
<b>17</b>	<b>Further Theory</b>	164
17.1	Simple Extensions	165
17.2	The Theorem of the Primitive Element	166
17.3	The Normal Basis Theorem	168
<b>18</b>	<b>The Algebraic Closure of a Field</b>	170
18.1	Introduction	170
18.2	The Existence of an Algebraic Closure	171
18.3	The Uniqueness of an Algebraic Closure	175
18.4	Conclusions	176

<b>19</b>	<b>Transcendental Elements and Algebraic Independence</b>	177
19.1	Transcendental Elements and Algebraic Independence	177
19.2	Transcendence Bases	180
19.3	Transcendence Degree	181
19.4	The Tower Law for Transcendence Degree	182
19.5	Lüroth's Theorem	183
<b>20</b>	<b>Generic and Symmetric Polynomials</b>	186
20.1	Generic and Symmetric Polynomials	186
	<i>Appendix: The Axiom of Choice</i>	189
	<i>Index</i>	192
