<i>Preface</i>	<i>page xi</i>
<i>Prerequisites and Notation</i>	xiii
<b>1 Introduction</b>	1
1.1 Presentation	1
1.2 How Does Probability Link with Number Theory Really?	2
1.3 A Prototype: Integers in Arithmetic Progressions	4
1.4 Another Prototype: The Distribution of the Euler Function	15
1.5 Generalizations	21
1.6 Outline of the Book	24
<b>2 Classical Probabilistic Number Theory</b>	26
2.1 Introduction	26
2.2 Distribution of Arithmetic Functions	26
2.3 The Erdős–Kac Theorem	31
2.4 Convergence without Renormalization	39
2.5 Final Remarks	45
<b>3 The Distribution of Values of the Riemann Zeta Function, I</b>	47
3.1 Introduction	47
3.2 The Theorems of Bohr–Jessen and of Bagchi	50
3.3 The Support of Bagchi’s Measure	67
3.4 Generalizations	72
<b>4 The Distribution of Values of the Riemann Zeta Function, II</b>	75
4.1 Introduction	75
4.2 Strategy of the Proof of Selberg’s Theorem	76
4.3 Dirichlet Polynomial Approximation	85
4.4 Euler Product Approximation	89
4.5 Further Topics	95

<b>5</b>	<b>The Chebychev Bias</b>	97
5.1	Introduction	97
5.2	The Rubinstein–Sarnak Distribution	98
5.3	Existence of the Rubinstein–Sarnak Distribution	102
5.4	The Generalized Simplicity Hypothesis	113
5.5	Further Results	123
<b>6</b>	<b>The Shape of Exponential Sums</b>	124
6.1	Introduction	124
6.2	Proof of the Distribution Theorem	129
6.3	Applications	139
6.4	Generalizations	143
<b>7</b>	<b>Further Topics</b>	144
7.1	Equidistribution Modulo 1	144
7.2	Roots of Polynomial Congruences and the Chinese Remainder Theorem	148
7.3	Gaps between Primes	151
7.4	Cohen–Lenstra Heuristics	152
7.5	Ratner Theory	153
7.6	And Even More . . .	155
	<b>Appendix A Analysis</b>	157
A.1	Summation by Parts	157
A.2	The Logarithm	158
A.3	Mellin Transform	159
A.4	Dirichlet Series	162
A.5	Density of Certain Sets of Holomorphic Functions	167
	<b>Appendix B Probability</b>	171
B.1	The Riesz Representation Theorem	171
B.2	Support of a Measure	172
B.3	Convergence in Law	174
B.4	Perturbation and Convergence in Law	177
B.5	Convergence in Law in a Finite-Dimensional Vector Space	182
B.6	The Weyl Criterion	187
B.7	Gaussian Random Variables	194
B.8	Sub-Gaussian Random Variables	197
B.9	Poisson Random Variables	199
B.10	Random Series	200
B.11	Some Probability in Banach Spaces	209

*Contents*

ix

<b><i>Appendix C</i></b>	<b>Number Theory</b>	222
C.1	Multiplicative Functions and Euler Products	222
C.2	Additive Functions	226
C.3	Primes and Their Distribution	227
C.4	The Riemann Zeta Function	230
C.5	Dirichlet L-Functions	234
C.6	Exponential Sums	240
	<i>References</i>	246
	<i>Index</i>	252
