<i>Preface</i>	<i>page xi</i>
<i>What is Computational Physics?</i>	<i>xiii</i>
Part I Stochastic Methods	1
1 Random Numbers	3
1.1 Definition of Random Numbers	3
1.2 Congruential RNG (Multiplicative)	4
1.3 Lagged Fibonacci RNG (Additive)	7
1.4 Available Libraries	8
1.5 How Good is an RNG?	9
1.6 Nonuniform Distributions	11
2 Random-Geometrical Models	17
2.1 Percolation	17
2.2 The Sol–Gel Transition	17
2.3 The Percolation Model	19
2.4 Fractals	34
2.5 Walks	42
2.6 Complex Networks	50
3 Equilibrium Systems	55
3.1 Classical Statistical Mechanics	55
3.2 Ising Model	59
4 Monte Carlo Methods	67
4.1 Computation of Integrals	67
4.2 Integration Errors	68
4.3 Hard Spheres in a Box	71
4.4 Markov Chains	74
4.5 $M(RT)^2$ Algorithm	76
4.6 Glauber Dynamics (Heat Bath Dynamics)	79
4.7 Binary Mixtures and Kawasaki Dynamics	80
4.8 Creutz Algorithm	81

4.9	Boundary Conditions	83
4.10	Application to Interfaces	83
5	Phase Transitions	85
5.1	Temporal Correlations	85
5.2	Decorrelated Configurations	87
5.3	Finite-Size Scaling	87
5.4	Binder Cumulant	89
5.5	First-Order Transitions	90
6	Cluster Algorithms	93
6.1	Potts Model	93
6.2	The Kasteleyn and Fortuin Theorem	94
6.3	Coniglio–Klein Clusters	95
6.4	Swendsen–Wang Algorithm	96
6.5	Wolff Algorithm	97
6.6	Continuous Degrees of Freedom: The n-Vector Model	98
7	Histogram Methods	100
7.1	Broad Histogram Method	101
7.2	Flat Histogram Method	102
7.3	Umbrella Sampling	103
8	Renormalization Group	105
8.1	Real Space Renormalization	105
8.2	Renormalization and Free Energy	105
8.3	Majority Rule	106
8.4	Decimation of the One-Dimensional Ising Model	107
8.5	Generalization	109
8.6	Monte Carlo Renormalization Group	111
9	Learning and Optimizing	112
9.1	Hopfield Network	112
9.2	Boltzmann Machine Learning	114
9.3	Simulated Annealing	119
10	Parallelization	122
10.1	Multispin Coding	122
10.2	Vectorization	124
10.3	Domain Decomposition	125
11	Nonequilibrium Systems	127
11.1	Directed Percolation and Gillespie Algorithms	127
11.2	Cellular Automata	133
11.3	Irreversible Growth	137

Part II Molecular Dynamics	147
12 Basic Molecular Dynamics	149
12.1 Introduction	149
12.2 Equations of Motion	150
12.3 Contact Time	152
12.4 Verlet Method	153
12.5 Leapfrog Method	154
13 Optimizing Molecular Dynamics	157
13.1 Verlet Tables	158
13.2 Linked-Cell Method	158
14 Dynamics of Composed Particles	161
14.1 Lagrange Multipliers	161
14.2 Rigid Bodies	163
15 Long-Range Potentials	169
15.1 Ewald Summation	169
15.2 Particle-Mesh Method	171
15.3 Reaction Field Method	175
16 Canonical Ensemble	177
16.1 Velocity Rescaling	178
16.2 Constraint Method	179
16.3 Nosé–Hoover Thermostat	179
16.4 Stochastic Method	183
16.5 Constant Pressure	184
16.6 Parrinello–Rahman Barostat	185
17 Inelastic Collisions in Molecular Dynamics	187
17.1 Restitution Coefficient	187
17.2 Plastic Deformation	188
17.3 Coulomb Friction and Discrete Element Method	190
18 Event-Driven Molecular Dynamics	192
18.1 Event-Driven Procedure	192
18.2 Lubachevsky Method	194
18.3 Collision with Perfect Slip	195
18.4 Collision with Rotation	196
18.5 Inelastic Collisions	197
18.6 Inelastic Collapse	198
19 Nonspherical Particles	202
19.1 Ellipsoidal Particles	202
19.2 Polygons	205
19.3 Spheropolygons	205

20	Contact Dynamics	208
20.1	One-Dimensional Contact	208
20.2	Generalization to N Particles	212
21	Discrete Fluid Models	215
21.1	Lattice Gas Automata	215
21.2	Lattice Boltzmann Method	215
21.3	Stochastic Rotation Dynamics	218
21.4	Direct Simulation Monte Carlo	219
21.5	Dissipative Particle Dynamics	220
21.6	Smoothed Particle Hydrodynamics	221
22	Ab Initio Simulations	222
22.1	Introduction	222
22.2	Implementation of Wave Functions	225
22.3	Born–Oppenheimer Approximation	225
22.4	Hohenberg–Kohn Theorems	226
22.5	Kohn–Sham Approximation	228
22.6	Hellmann–Feynman Theorem	229
22.7	Car–Parrinello Method	230
	<i>References</i>	232
	<i>Index</i>	252
