600 SUBJECT INDEX

- pedagogical agents (PA). (cont.)  
 politeness of, 279  
 publication bias on, 452  
 random-effects model, 454  
 on retention tests, 452  
 role of, 450  
 in social agent theory, 455–456  
 transfer tests and, 455  
 types of, 450–451  
 voice principle and, 455–456  
 voices for, 455–456
- pedagogical functions, in multiple representations, 165
- perceptual processing, of animation, 318
- perceptual world knowledge, 87–88
- peripheral vision, in APM, 322
- permanent information  
 advantages of, 268  
 transient information and, 268, 270
- personal presence, 31
- personalization cues, 277–278
- personalization principle, 14, 473–474  
 in computer games, 477–478  
 defining, 277, 279  
 in e-learning, 543  
 forms of, 279  
 inverted, 280  
 meta-analytic review on, 279  
 negative effects of, 280  
 politeness in, 280  
 research on, 279–280  
 retention tests on, 279  
 social cues and, 279–280  
 transfer tests on, 279–280
- PHET, 158–159
- phonological lexicon, 87
- phonological loop, 86–87, 93–94  
 in language acquisition, 19  
 in working memory, 18
- physical integration strategy, 206–207  
 efficacy of, 209  
 intelligibility in, 209  
 learning outcomes from, 208  
 in self-management, 432  
 for split-attention effect, 263

 in instructional design, 505–506  
 learning outcomes from, 297–298  
 limitations of current research, 506–507  
 low immersion, 500  
 multimedia learning in, 498–505  
 seductive details in, 299  
 segmentation principle in, 300  
 simulations, 467–468
- virtual training environments, presence in, 31–32
- VisCube C4, 499
- visual agnosia, 95
- visual cues  
 eye movements as, 225–226  
 sense-making and, 190
- visual diagnosis tasks, 225–226
- visual displays  
 active processing in, 512  
 annotated, 511–518  
 coherence principle in, 513  
 dual channels in, 510  
 in education, 510  
 essential processing in, 512  
 extraneous processing in, 512–514  
 future research on, 518  
 generative processes in, 512, 514–518  
 hierarchical inferences in, 515  
 inference generation in, 514–517  
 instructional design and, 512–518  
 learning with, 510–512  
 limited capacity in, 510–512  
 matrices in, 513  
 meaningful learning from, 512
- relational inferences in, 515–516  
 research on, 518  
 in signaling principle, 514–518  
 in spatial contiguity principle, 513  
 temporal inferences in, 515
- visual mode, 7
- visual signals, 189
- visualizing activities, 340–341, 347  
 drawing as, 343–344  
 imagining as, 345  
 mapping as, 344–345  
 object manipulation as, 346
- visuospatial manipulations, in animation, 320
- visuospatial processor, in split-attention effect, 263
- visuo-spatial sketchpad, 87, 93–94  
 in working memory, 18
- voice cues, 278
- voice principle, 14  
 advantages of, 280  
 defining, 277, 280  
 machine voices in, 280  
 on-screen text in, 280–281  
 PAs and, 455–456  
 research on, 280–281
- volition, 123–124
- VR. *See* virtual reality
- VRL. *See* virtual and remote laboratories
- Web menus, 222
- WebEx, 538
- whole-task principle, 104–108
- wiring diagrams, 174
- WMC. *See* working memory capacity
- word and image integration, in CTML, 65
- word organization, in CTML, 64
- word selection, in CTML, 63–64
- words. *See also* text  
 in CTML, 148  
 in informational delivery view, 148  
 informational equivalence of, 148  
 pictures combined with, 148–149  
 pictures differentiated from, 147  
 words-only presentations, 148
- worked example principle, 14, 232  
 defining, 231–232  
 in e-learning, 543  
 in multimedia learning, 231
- worked examples  
 active learning in, 237  
 classical, 233–234  
 CLT on, 234  
 effectiveness of, 232–237  
 EMMEs in, 237  
 extraneous demands in, 237–238  
 extraneous processing reduction and, 235–236  
 future research on, 238  
 in generative processing, 236–237  
 instructional design in, 232  
 instructional guidelines, 234–237  
 limitations of research on, 238  
 in multimedia learning, 232–234  
 principles during, 236–237  
 as prior knowledge activation, 237  
 self-explanation of, 231  
 sequencing in, 231–232, 236–237  
 split-attention effect and, 200  
 suboptimal processing in, 234–235

- working memory, 17, 62–63, 216  
 Baddeley's model of, 18  
 central executive in, 18  
 in CLT, 204–205, 212  
 in cognitive load theory, 20–21  
 components of, 18  
 defining, 261  
 division of, 261–262  
 in dual coding theory, 20  
 dual-channel component in, 18–19  
 emotions and, 127  
 episodic buffer in, 18  
 in expertise reversal principle, 178  
 extraneous cognitive load on, 304–305  
 features of, 269  
 independent processors in, 262–263  
 information sources in, 212  
 limitations of, 261–262  
 long-term memory and, 76–78  
 in modality principle, 261–262, 264  
 model, 59
- pain and, 218  
 perishability of, 269  
 phonological loop in, 18  
 in picture comprehension, 86–87  
 redundancy and, 215–216  
 representation in, 65–66  
 seductive details and, 189  
 in signaling, 227  
 in split-attention effect, 203–205  
 in text comprehension, 86–87  
 three-component model of, 17  
 in transient information principle, 269  
 visuo-spatial sketchpad in, 18
- working memory capacity (WMC), 41, 269, 318–319  
 multimedia learning research on, 41–42  
 segmenting principle and, 248  
 written/spoken text redundancy, 215–216
- YouTube, 3–5, 450–458, 538, 542–543
