combinatorics, 80–82
in Behe's malaria parasite model,, 157
improbability and, 129–132
probability theory, 121–124
Thorvaldsen and Hössjer's model and, 149
common ancestors
evidence of, 76
evolution and, 19–22
comparative anatomy, 25–26
evolution of complex structures and, 37–38
compensation, Sewell's theory of, 257–261
complexity, probabilistic threshold for, 135
complex specified information
flagellum model of, 137–146
information theory and, 172
natural selection and, 202–205
No Free Lunch theorems and, 198–200
origins of, 132
probability theory, 132–137
complex specified information, mathematical rhetoric in support of, 267–271
complex structures argument, 29–39
Compton, Robert, 183–184
computer science
artificial life experiments in, 207–211, 213–215, 219
evolutionary theory in, 51, 91–98, 108
language in, 96–97
constant slope, function of, 62–65
continuity, defined, 70–73
continuous function
graphical representation of, 70–73
modeling of, 62–65
Conway Morris, Simon, 18
cosmological constants, 202–204
counting, in probability theory, 121–124
creationism, 4, *see also* anti-evolutionism
Dawkins on, 170–172
second law argument in, 221–223
Crosby, J. L., 107–108
cultural differences, anti-evolution movements, 4
cumulative selection, 130–132

Darwin, Charles
age of Earth models and work of, 74
Behe's refutation of, 40–47
comparative anatomy and, 25–26
complex structures argument and, 29, 39
critics of, 9–15
evolutionary theory of, 1–3
on homology, 37–38
No Free Lunch theorems and work of, 198–200
on redundancy and complexity, 45
Darwin's Black Box (Behe), 40–47
Darwin's Doubt (Meyer), 108, 129–132, 272–273
Davies, Paul, 161, 174
Dawkins, Richard, 25–26, 34, 138–140, 161, 170–172
on second law of thermodynamics and evolution, 236–238
weasel experiments of, 191–195, 213–215
Dembski, William, 132–146, 172
criticisms of, 139, 201, 219
on information, 211–217
intelligent design and, 216–217
mathematical rhetoric used by, 268–269
on natural selection, 202–205
No Free Lunch theorems and, 198–200
The Design Inference (Dembski), 135
The Design of Experiments (Fisher), 142–143
The Design Revolution (Dembski), 172
detachability, Dembski's concept of, 141, 145–146
discontinuous function, graphical representation of, 70–73
Discovery Institute, 162
DNA replication
genetic information and, 173
human language compared to, 179–184
Dobzhansky, Theodosious, 26–27, 109
Dryden, D. F., 218–219
duplication, genetic information and, 174

Earth, age of, models for calculating, 74
ecology, development of, 2
Eddington, Arthur, 221–223
Eden, Murray, 85–91, 108, 184–185
The Edge of Evolution (Behe), 153
embryology, evolution and, 26–27
emigration, in population genetics, 120–121
energy
entropy and, 227–233
law of conservation of, 229
energy conversion mechanism, Morris's concept of, 251–254

space of possibilities
Dembski's complexity framework and, 145–146
mathematical definition of, 80–82
metric space, 83
specification
Dembski's complexity framework and, 140–146, 161
probability distribution and, 136–137
specified complexity, *see* complex specified information
stairstep information function, 213–215
statistical hypothesis testing, detachability theory and, 141
statistical mechanics, 233–236
evolutionary theory and, 262–264
statistics, information and, 180
Stearns, Stephen, 190–191
stepping stones in evolutionary theory, 40–47
Styer, Daniel, 265
syntax, information and, 180
Szathmáry, Eörs, 167–169
Szostak, J. W., 218

Takagi, Yuta, 210–211
technology, thermodynamics and, 262–264
TEM-1 penicillinase, site-directed mutagenesis, 185
temperature, entropy and, 223–227
theorems, definition of, 179–184
thermodynamics
anti-evolutionism and, 177–179, 238–243, 270–271
entropy and, 223–227
first law of, 227–233
Genesis Flood and, 246–251

978-1-108-84230-3 — The Failures of Mathematical Anti-Evolutionism
Jason Rosenhouse
Index
More Information

thermodynamics (cont.)
non-equilibrium thermodynamics, 265
open and closed systems in, 227–233
second law of, 221–223, 227–233
statistical mechanics, 233–236
Thomson, A. R., 218–219
Thomson, William (Lord Kelvin), 74
Thorvaldsen, Steinar, 147
Tierra experiment, 209–210
Tiktaalik roseae (fish fossil), 50–51
transitional fossils
evolution and, 9, 22–27
prevalence of, 28
transmutation, evolution and, 9
The Troubled Waters of Evolution (Morris), 251–254

Ulam, Stanislaw, 85, 90, 94–96, 99–105, 109
unbridgeable gaps argument, evolution and, 27–29
Undeniable (Axe), 271–273
uniform distribution, 115–117
improbability and, 126–132
universal information, anti-evolutionary concept of, 183–184

Van Ness, H. C., 235–236
variation, random mutation and, 130–132
vas deferens, design of, 33
vestigial structures, 54
evidence of evolution in, 24–25
Victoria Institute, 238–243

Waddington, Conrad, 97, 102–108
Wagner, Andreas, 188–191
weasel experiments, Dawkins development of, 191–195, 213–215
The Wedge of Truth (Johnson), 171–172
Weisskopf, Victor, 98
Wexler, Tom, 210–211
White, J. H., 218–219
Whitecomb, John, 246–251
Williams, William A., 10
Wilson, Robin, 66–67
Wistar Institute conference
critical reception of, 108
legacy of, 107–108
proceedings of, 84–86
random mutation and, 129–132
Wolpert, David, 195–198, 201
word puzzles, mathematical modeling and, 76–82

Yeates, Todd O., 188–191
Young Earth Creationism (YEC), 3–5
genetic information and, 175
improbability in, 125–126
information theory and, 179–184
senseless signs of history and, 55–56
