

# Contents

|   |                |
|---|----------------|
| Preface   | <i>page xv</i> |
| Acknowledgements  | xviii          |
| Further Reading   | xxi            |
| <br>  |                |
| Introduction  | 1              |
| <br>  |                |
| 1 The Anthropocene and the Earth System                                 | 11             |
| Defining the Anthropocene   | 11             |
| The Earth System  | 14             |
| The Anthropocene and the Earth System                                   | 19             |
| The Anthropocene Defaunation  | 22             |
| History Is Important  | 26             |
| <br>  |                |
| 2 A Short Detour: The Fossil Record and the Geological<br>Time Scale    | 29             |
| Limitations of the Fossil Record  | 29             |
| Biodiversity  | 33             |
| Origination and Extinction  | 35             |
| Extinction, Origination, and the Geological Time Scale                  | 38             |
| Recognising Origination and Extinction in the Fossil Record             | 42             |
| The Sepkoski Data Set and the Beginning of Modern<br>Extinction Studies | 44             |
| <br>  |                |
| 3 The Origin of Animals and the Emergence of the<br>Earth System        | 49             |
| Introduction  | 49             |
| Brachina Creek  | 49             |
| The Ediacara Fauna  | 55             |
| The Cambrian Explosion  | 61             |
|   | xi             |

## xii CONTENTS

|   |  |     |
|---|--|-----|
|   | The Deep History of Oxygen                           | 65  |
|   | The Earth System Emerges                             | 75  |
| 4 | Documenting Ancient Biodiversity                     | 76  |
|   | Introduction   | 76  |
|   | First Attempts                                       | 77  |
|   | Sepkoski 1984 – A Classic Study                      | 79  |
|   | Better Data Sets, More Uncertainty?                  | 89  |
|   | Bring on the Supercomputers                          | 94  |
| 5 | Mass Extinctions: The Basics                         | 99  |
|   | The Restaurant at the End of the Cretaceous          | 99  |
|   | What Exactly Is a Mass Extinction?                   | 103 |
|   | How Big Are the ‘Big Five’, and How Do We Know That? | 108 |
|   | Cycles of Extinction                                 | 114 |
|   | The Rise and Fall of Nemesis                         | 120 |
|   | Mass Extinctions and the Earth System                | 122 |
| 6 | Causes of the End-Permian and End-Cretaceous         |     |
|   | Extinction Events                                    | 125 |
|   | Introduction   | 125 |
|   | The End-Permian Mass Extinction                      | 128 |
|   | The Siberian Traps                                   | 134 |
|   | The End-Cretaceous Mass Extinction                   | 139 |
|   | A More Formal Introduction                           | 141 |
|   | More on the Meteorite                                | 143 |
|   | An Accident Waiting to Happen                        | 146 |
| 7 | Time Heals All: Recovering from a Mass Extinction    | 159 |
|   | Replacing Species                                    | 159 |
|   | Ecosystem Recovery                                   | 163 |
|   | Earth System Succession                              | 167 |

|   |  |     |
|---|--|-----|
| 8 | The Late Quaternary Megafaunal Extinctions               | 169 |
|   | The Youngest Mass Extinction?                            | 169 |
|   | Small Island Extinctions                                 | 175 |
|   | Continental Extinctions – A Confusion of Causes          | 176 |
|   | Dating Problems  | 178 |
|   | A Meteorite (or Comet) Did It                            | 181 |
|   | Humans Did It  | 184 |
|   | Climate Did It   | 186 |
|   | Humans Plus Climate Equals Extinction?                   | 190 |
| 9 | Surviving the Anthropocene                               | 193 |
|   | Are We There Yet?  | 193 |
|   | What If We Did Nothing?                                  | 199 |
|   | The Resilience of the Earth System                       | 202 |
|   | Living and Dying in the Margin of Error                  | 208 |
|   | Appendix 1: The Geological Time Scale                    | 211 |
|   | Appendix 2: How Long Will It Take to Count to 1 Million? |     |
|   | A Rough Guide  | 213 |
|   | Further Reading  | 215 |
|   | Index  | 237 |
