Introduction	I
1 From the Division of Labor to <i>Besinnung</i>	16
1.1 Intentional History	16
1.2 Many Senses of “Naturalism”	18
1.3 Definition of <i>Besinnung</i>	20
1.4 Division of Labor	25
1.5 Natural Attitudes versus the Transcendental Attitude	28
1.6 Husserl and the Development of the Humanities	32
1.7 <i>Besinnung</i> in <i>Formal and Transcendental Logic</i>	34
1.8 <i>Besinnung</i> and the Division of Labor Reconsidered	36
1.9 Correlation	39
2 The Chimera of Logicism: Husserl’s Criticism of Frege	43
2.1 Overzealousness for Rigor	44
2.2 Husserl’s Criticism of Frege	47
2.3 Frege’s Rejoinder	48
2.4 Frege’s Influence	50
2.5 Husserl on Dedekind	53
3 Clarifying the Goal of Modern Mathematics: Definiteness	54
3.1 Aims and Tendencies in the Development of Modern Mathematics in the Late Nineteenth Century	55
3.2 Structuralism in the <i>Prolegomena</i> (1900)	57
3.3 Double Lecture	60
3.4 Absolute and Relative Completeness	65
3.5 Many Senses of Completeness	70
3.6 Conclusion	72

viii	<i>Contents</i>	
4	Normativity of the Euclidean Ideal	73
4.1	Background: Göttingen Idea of Preestablished Harmony	73
4.2	Husserl's Material and Formal Ontologies	77
4.3	The Essences	79
4.4	Seeing Essences	81
4.5	The "Essential Holism"	83
4.6	Exact and Morphological Essences	86
4.7	The Normativity of Exact Essences	88
5	Husserl's <i>Formal and Transcendental Logic</i> (1929)	91
5.1	Husserl and the Mathematicians of the 1920s	92
5.2	Formal Logic in <i>Formal and Transcendental Logic</i>	113
5.3	Transcendental Logic	127
6	Gödel, Skolem, and the Crisis of the 1930s	136
6.1	Husserl and the Mathematicians in the 1930s	137
6.2	Husserl in 1936–1937	144
6.3	Gödel, Skolem, and the Ideal of Rationality	147
6.4	Husserl's <i>Besinnung</i> of Galileo	150
6.5	Conclusion	155
7	Husserl's Combination View of Mathematics	158
7.1	Husserl's Noneliminative Structuralism versus Platonism	161
7.2	Structuralism and Its Thinness in Husserl's Later Works	164
7.3	Incompleteness of Mathematical Objects	167
7.4	Husserl and the Iterative Conception of Sets	170
7.5	Conclusion: Husserl's Philosophy of Mathematics	173
8	Kant and Husserl's Critical View of Logic	175
8.1	Husserl's Criticism of Kant	175
8.2	Husserl on Formal Logic, Its Normativity, and Logical Principles	178
8.3	Husserl's Transcendental Logic	183
8.4	Husserl's Critical View of Logic	185
8.5	Logic as the Normative Guide for Sciences	186
	Epilogue: A Look Ahead	189
	<i>Bibliography</i>	192
	<i>Index</i>	208
