Index

ABCDE protocol
cardiogenic shock management, 113–14
critically ill baby, 285–6
intracranial pressure assessment, 155–6
referral procedures, 102–3
spelling in CHD patients and, 91–2
time-critical neurosurgical transfer, 166–8
abdominal malignancies, abdominal sepsis, differential diagnosis, 179–81
abdominal/pelvic surgery, small bowel obstruction risk and, 187
abdominal sepsis bilious vomiting and, 178–84
septic and hypovolaemic shock, 181–3
abdominal ultrasound (US), intracranial pressure assessment, 155–6
abdominal x-rays
fall injuries, 237–42
tachycardia and irritability and, 99–104
abuse/neglect, fall injuries, 163–4
acidosis
management in diabetic ketoacidosis, 256–7
Tetralogy of Fallot management, 92
acute abdomen
abuse assessment, 237–42
bilious vomiting and, 178–84
differential diagnosis, 178–81
extra-abdominal considerations, 179–81
haemodynamic support and electrolyte management, 181–3
possible causes of, 238–40
sickle cell crisis, 272–6
acute liver failure, 277–80
acute lymphoblastic leukaemia (ALL), presenting clinical emergencies with, 135–8
acute myeloid leukaemia, chemotherapy management of, 263–6
acute myocarditis/
cardiomyopathy, acute abdomen and, 179–81
acute respiratory distress syndrome (ARDS) criteria for paediatric ARDS, 141–3
diagnosis and management, 128–32
evidence-based management, 129–32
retrieval vs. resuscitation decision, 132–3
adenosine, tachycardia management, 119
adrenaline
in cardiogenic shock patients, 114
congenital heart disease patients, 86–7
guidelines for using, 308
adrenaline nebulisers, stridor management, 65–9
agitation, Tetralogy of Fallot management and avoidance of, 92
air transfers. See flight retrieval and transfer
airway management in acute management on retrieval, 299–302
cardiogenic shock, 113
fall injuries, 160–1
hypovolaemic shock, 173–4
indications and contraindications, 299–302
multidrug overdose, 245–6
during transfers, 218, 221–4
Alisio, Michelle, 122–6
ambulance kit bag, storage and restocking of, 13–14
ambulance transfers
crew resource management guidelines, 288–92
palliative care transfers, 232–3
protocols for, 7
aminophylline, asthma management, 72–3
amiodarone treatment, tachycardia, 120
amiodipine, 244–5
amoxicillin, anaphylactic reaction, 127–33
anaemia, tumour lysis syndrome patients, 139
anaesthesia
acute liver failure, 279–80
asthma management and risk of, 71
in cardiogenic shock patients, 113
in critically ill infants, 281–3
guidelines for, 19–28
inhaled foreign body, 44–5
oxygenation and, 20
in pneumonia/empyema shock patients, 56–7
upper airway obstruction and, 32–3
analgesia
abdominal sepsis, 182, 188–9
Tetralogy of Fallot management, 92
Annieq, Ariane, 191–6, 303–4
antibiotics
for abdominal sepsis, 181
bronchiolitis and co-infection, 37
neutropenic sepsis, 263–5
renal disease management, 269–70
anti-diuretic hormone release, bronchiolitis and, 37
antihypertensive agents, multidrug overdose from, 243–7
antimicrobial therapy, septic shock, 125, 229
anti-NDMA encephalitis, 212–13
aortic covered stent, foreign body ingestion and, 176–7
aorto-oesophageal fistula, foreign body ingestion and, 176
APLS algorithm
cardiac arrest procedures, 148–53
haemorrhage as PEG insertion complication, 204–5
apnoeic episodes
acute liver failure, 277
retrieval and transfer processes, 35–40, 218–19
arrhythmia, transfer procedures with, 97–8, 115
asthma management, 70–3 complications, 71
differential diagnosis, 70–1
rescue measures during retrieval, 72–3
atrial flutter, tachycardia diagnosis, 118
atropine, pulmonary hypertension and avoidance of, 77–8
autoimmune encephalitis, 212–13
AV re-entry tachycardia (AVRT), 116–18
back bruising, abuse assessment, 237–42
bag mask ventilation
pertussis patients, 62–3
upper airway obstruction, 33
bat wing markings, chest x-rays, 96
Berlin criteria, adult ARDS, 128–32
beta-2 agonist infusion, asthma management, 72–3
beta blockers, Tetrology of Fallot management, 91–2
Bickell, Fiona, 207–9
bilious vomiting
differential diagnosis, 178–81
extended abdomen and, 178–84
bleeding
fall injuries, 162–3
vomiting with, 171–7
blood pressure assessment of, 17–18
intubation in pneumonia/empyema patients, 56–7
neurosurgical emergency targets, 168–9
blood products complications from, 174
resuscitation in gastro-intestinal bleeding and, 172–4
sickle cell crisis and, 274
blood sugar levels
cardiac arrest assessment, 148
cyanotic baby, 84
multidrug overdose, 245–6
blood tests and blood gas results
abdominal sepsis and, 185
acute liver failure, 277
anaphylactic reaction, 127–33
anaesthetisation and, 19
apnoeic episodes and, 35–40
bilious vomiting, 178
bronchiolitis patients, 59
cardiomegaly and opacification, 281–7
chemotherapy management and, 263–4
in collapsed neonate, 259–62
COVID-19 assessment, 227
COVID-19 results, 227
diarrhoea and vomitting and, 267
facial swelling, 48
fall injuries, 159, 237–42
functional decline assessment, 94
lethargic patients, 109–11
pneumonia/empyema, 53
pulmonary hypertension, 74
respiratory failure, 221–6
shock and cyanosis assessment, 84–8
sickle cell crisis, 272
spelling episodes and, 89–93
tachycardia, 116
upper airway obstruction, 29
blue baby assessment and transfer, 79–83
blunt dissection, chest drain insertion, 296–7
boot-shaped cardiac shadow, 89–93
bougie, 21–2
bradycardia
antenatal diagnosis and treatment, 108
intubation guidelines, 105–6
multidrug overdose, 245–6
pharmacological treatment, 107
transcutaneous pacing, 107
brain death. See hypoxic ischaemic brain injury
breathing management in cardiogenic shock
patients, 113
hypovolaemic shock, 173–4
neonatal air transfers, 218
