9 Top Tips for Best Practice	102
Index	115

Acknowledgements

We recognise and thank the many clinical scientists, mental health practitioners, therapists and health care managers who made the writing of this book possible. In particular, we thank Professor Bernadka Dubicka of the Hull York Medical School and Professor Paul Wilkinson of the University of Cambridge, who contributed substantially to the development, clinical research and evaluation of brief psychosocial intervention (BPI). The clinical science that has established BPI as clinically effective for the treatment of major depression in adolescents was funded by the National Institute of Health and Care Research UK, together with supporting funds from the Wellcome Trust, Medical Research Council (MRC) UK and the universities of Cambridge, Manchester, Reading and University College London. We are grateful to the National Institute for Health and Care Excellence (NICE) UK for adopting and recognising BPI as an evidence-based clinical intervention for the treatment of major depression in adolescents. We pay tribute to the NHS organisations who sponsored the randomised controlled trials to ensure that BPI was tested against proven psychotherapies, thereby ensuring the best pragmatic results for the benefit of mentally unwell young people. Finally, we thank all the young people, parents and carers who helped and participated in our studies and who received treatment in our clinics throughout the NHS in England. Their lived experiences of mental illness and their perception of BPI treatment have made an invaluable contribution to our understanding of therapeutic effects. We sincerely hope that in return this book contributes to future improvements in the treatment and care of young people with depression and related mental illnesses and their families through the delivery of evidence-based psychosocial interventions such as BPI.
