Understanding Economic Change

Although the economy has always been changing, ever more innovations now seem to accelerate the transformation process. Are there any laws governing the incessant global change? Does it accord with our intentions and desires and make us happier? Do our institutions and our democracies cope with the challenges? How does economic theory explain what is going on? In this volume, experts in the field discuss the advances that evolutionary economics has made in exploring questions like these. The broad range of topics include a review of the development of the field: its conceptual and methodological characteristics are outlined; problems posed by macroeconomic evolution and the institutional challenges are highlighted; and, last but not least, the implications of the evolution of the economy for wellbeing and sustainability are addressed. Taken together, the contributions demonstrate the potential of an evolutionary paradigm for making sense of economic change and for assessing its consequences.

Ulrich Witt is Past Director of the Evolutionary Economics Group at the Max Planck Institute of Economics in Jena, Germany. He has published a vast number of articles and books on evolutionary economics and is Editor-in-chief of the *Journal of Bioeconomics*.

Andreas Chai is an applied economist and Head of Economics and Business Statistics Discipline at the Griffith Business School, Griffith University, Australia. Andreas has published in various economic journals, including the *Journal of Economic Perspectives* and the *Cambridge Journal of Economics*. 
Understanding Economic Change

Figures

4.1 Adjacent levels of abstraction in Hodgson and Knudsen’s Generalized Darwinism page 136
4.2 What sort of evolutionary theory is general and abstract enough to fit both the biological and the cultural domain? 147
6.1 Labour productivity and capital/labour ratio over 500 simulation steps (benchmark setting) 193
6.2 Labour productivity growth rate: $i$ vs. $\sigma$ 200
6.3 Labour productivity growth rate: $\chi$ vs. $\phi$ 202
6.4 Estimates and statistics for the Verdoorn coefficient: $i$ vs. $\sigma$ 206
6.5 Estimates and statistics for the Verdoorn coefficient: $\phi$ vs. $\chi$ 207
9.1 Stage payoffs for the Bathroom Game with $\xi = 7$ 293
9.2 The sets of jointly convergent pure-strategy rewards for various values of $\xi$ 297
9.3 The set of jointly convergent pure-strategy rewards and its convex hull for $\xi = 7$ 297
9.4 All rewards in $E'$ are equilibrium rewards 301
Tables

6.1 Parameter settings (initial conditions and benchmark setting) .............................. page 192
6.2 Labour productivity, capital–output ratio and Herfindahl index correlations to output and capital intensity (LAD) .................. 195
6.3 Labour productivity, capital–output ratio, Herfindahl index dynamic correlations (VAR estimates) .................. 197
6.4 Parameter settings (default values in bold) ......................................................... 200
6.5 Kaldor-Verdoorn Law estimates (OLS) ................................................................. 204
6.6 Main simulation results ......................................................................................... 208
8.1 The shirking dilemma ......................................................................................... 261
8.2 Mutual gains from sharing authority ................................................................. 276
8.3 Asymmetric conflict ......................................................................................... 278
