London Mathematical Society Lecture Note Series: 429

Sheaves and Functions Modulo $p$
Lectures on the Woods Hole Trace Formula

LENNY TAEELMAN

Universiteit van Amsterdam
# Contents

Introduction 1  

Chapter 1. \( \tau \)-sheaves, crystals, and their trace functions 7  
  1. Coherent \( \tau \)-sheaves 7  
  2. The trace function of a coherent \( \tau \)-sheaf 11  
  3. Nilpotent coherent \( \tau \)-sheaves 12  
  4. Crystals 13  
  5. Pointwise criteria 16  

Chapter 2. Functors between categories of crystals 21  
  1. Pullback 21  
  2. Tensor product 22  
  3. Direct images 24  
  4. Extension by zero 30  
  5. Pushforward with proper support 36  

Chapter 3. The Woods Hole trace formula 43  
  1. The Grothendieck group of crystals 43  
  2. The sheaves-functions dictionary 45  
  3. A quotient of the Grothendieck group of crystals 46  
  4. Proof of the Localization Theorem 48  

Chapter 4. Elementary applications 57  
  1. Congruences between number of points 57  
  2. Chevalley-Warning 58  
  3. Polynomial sums 59  
  4. Hasse invariant 60  

Chapter 5. Crystals with coefficients 63  
  1. \( \tau \)-sheaves and crystals with coefficients 63  
  2. Crystals with finite coefficients 64  
  3. Traces of crystals with finite field coefficients 67
## CONTENTS

Chapter 6. Cohomology of symmetric powers of curves  
1. Symmetric tensors and exterior tensor powers  71  
2. Some sheaves on the symmetric powers of a scheme  75  
3. Cohomology of exterior symmetric tensor powers  77  
4. Crystals on symmetric powers  81  

Chapter 7. Trace formula for $L$-functions  
1. $L$-functions of $\tau$-sheaves and crystals  87  
2. Computation of $L$-functions via symmetric powers  90  
3. Proof of the trace formula for $L$-functions  92  

Chapter 8. Special values of $L$-functions  
1. Example: the Goss zeta function of a scheme over $F_q[t]$  97  
2. Extensions of $\tau$-sheaves  100  
3. Determinants and Fitting ideals  103  
4. Special values of $L$-functions of $\tau$-sheaves  105  
5. An example failing the semi-simplicity hypothesis  106  

Appendix A. The trace formula for a transversal endomorphism  
1. Extensions  109  
2. Grothendieck-Serre duality  111  
3. A local computation  115  
4. Duality for the graph of a morphism  116  
5. Woods Hole trace formula  118  

Bibliography.  121
