PREFACE BY DR W. H. YOUNG	v
AUTHOR'S PREFACE	vii

CHAPTER I

	NUMBER	1—84
§ 1. Fundamental laws of algebra		1
Examples I		5
§ 2. Rational numbers		5
Examples II		12
§ 3. The problem of measurement. Irrational numbers		13
Examples III		19
§ 4. Algebraic consequences of the fundamental laws. Equalities and Equations		20
Examples IV		26
§ 5. Inequalities and inequations		27
Examples V		36
§ 6. Infinite sequences		38
Examples VI		57
§ 7. Infinite series		61
Examples VII		82

CHAPTER II

	LOGARITHMS	85—133
§ 1. Indices		85
Examples VIII		91
§ 2. Logarithms		93
Examples IX		99
§ 3. Logarithmic tables		99
Examples X		107
§ 4. The logarithmic series		107
Examples XI		126
§ 5. The exponential series		127
Examples XII		132

CHAPTER III

	PAGE
FUNCTIONS	134—195
§ 1. The graph of x^2	134
Examples XIII	151
§ 2. Polynomials	153
Examples XIV	161
§ 3. Rational functions	162
Examples XV	166
§ 4. Functions defined by power series	167
Examples XVI	175
§ 5. The trigonometrical functions	176
Examples XVII	187
§ 6. The hyperbolic functions	189
Examples XVIII	193

CHAPTER IV

	PAGE
DIFFERENTIAL AND INTEGRAL CALCULUS	196—280
§ 1. General idea of a limit	
Examples XIX	206
§ 2. Properties of limits	209
Examples XX	213
§ 3. Differential coefficients	214
Examples XXI	220
§ 4. Differentiation of elementary functions	222
Examples XXII	230
§ 5. Applications of differentiation	231
Examples XXIII	240
§ 6. The definite integral and its evaluation	242
Examples XXIV	257
§ 7. Properties of the definite integral	261
Examples XXV	265
§ 8. Various applications of integration and differentiation	267
Examples XXVI	279
APPENDIX—COMPLEX NUMBERS	281—285
Examples XXVII	284
BIOGRAPHICAL NOTES	286
INDEX OF SYMBOLS	289
GENERAL INDEX	290
