Preface	xvi
Part I	Introductory
1	An Introduction to Intuitionistic Logic 3
	<i>Michael Rathjen</i> 3
	1.1 Introduction 3
	1.2 Constructive Existence 4
	1.3 The Brouwer–Heyting–Kolmogorov Interpretation 8
	1.4 Natural Deductions 10
	1.5 A Hilbert–Style System for Intuitionistic Logic 14
	1.6 Realizability 15
	1.7 The Curry–Howard Correspondence 17
	<i>References</i> 18
2	An Introduction to Constructive Set Theory: An Appetizer 20
	<i>Michael Rathjen</i> 20
	2.1 Introduction 20
	2.2 The Axiomatic Framework 23
	2.3 Elementary Mathematics in CZF 26
	2.4 The Development of Set Theory in CZF 37
	2.5 Large Sets in CZF 43
	2.6 Axioms of Choice in Constructive Set Theory 45
	2.7 CZF and the Limited Principle of Omniscience 51
	2.8 Models of CZF and Axiomatic Freedom 52
	<i>References</i> 56

vi	<i>Contents</i>	
3	Bishop's Mathematics: A Philosophical Perspective	61
	<i>Laura Crosilla</i>	61
3.1	Introduction	61
3.2	Bishop on Brouwer	62
3.3	Brouwer's Mathematics	63
3.4	Persuasion and Dialogue	66
3.5	Formalisation	68
3.6	Philosophy	70
3.7	Traditional Philosophical Arguments for Intuitionistic Logic	73
3.8	Philosophical Objections	75
3.9	Too Strong	78
3.10	Concluding Remarks	80
	<i>Acknowledgements</i>	84
	<i>References</i>	84
	Part II Algebra and Geometry	
4	Algebra in Bishop's style: A Course in Constructive Algebra	93
	<i>Henri Lombardi</i>	93
4.1	Introduction	93
4.2	Revisiting Bishop's Set Theory	95
4.3	The Corpus of Classical Abstract Algebra Treated in the Book	99
4.4	Principal Ideal Domains	99
4.5	Factorization Problems	101
4.6	Noetherian Rings, Primary Decompositions and the Principal Ideal Theorem	103
4.7	Wedderburn Structure Theorem for Finite-Dimensional k -Algebras	108
4.8	Dedekind Domains	111
	<i>Acknowledgements</i>	112
	<i>References</i>	112
5	Constructive Algebra: The Quillen–Suslin Theorem	114
	<i>Ihsen Yengui</i>	114
5.1	Introduction	114
5.2	Quillen's Proof of Serre's Problem	116
5.3	Suslin's Proof of Serre's Problem	134
	<i>References</i>	146

<i>Contents</i>		vii
6	Constructive Algebra and Point-Free Topology	150
	<i>Thierry Coquand</i>	150
	6.1 Introduction	150
	6.2 Zariski Spectrum	151
	6.3 Minimal and Maximal Primes	153
	6.4 Forcing over a Site	156
	6.5 Concluding Remarks	161
	<i>References</i>	162
7	Constructive Projective Geometry	168
	<i>Mark Mandelkern</i>	168
	7.1 Introduction	168
	7.2 Real Projective Plane	169
	7.3 Projective Extensions	189
	<i>References</i>	195
Part III Analysis		
8	Elements of Constructive Analysis	201
	<i>Hajime Ishihara</i>	201
	8.1 Introduction	201
	8.2 Real Numbers	202
	8.3 Metric Spaces	207
	8.4 Normed Linear Spaces	213
	<i>References</i>	219
9	Constructive Functional Analysis	221
	<i>Hajime Ishihara</i>	221
	9.1 Introduction	221
	9.2 Preliminaries	222
	9.3 Completeness	226
	9.4 Convexity	235
	9.5 Duality in Hilbert Spaces	245
	<i>References</i>	252
10	Constructive Banach Algebra Theory	255
	<i>Robin S. Havea and Douglas Bridges</i>	255
	10.1 Introduction	255
	10.2 Preliminaries	256
	10.3 The Spectral Mapping Theorem	260
	10.4 Approximating the State Space	266
	10.5 Hermitian and Positive Elements	273
	<i>References</i>	284

viii	<i>Contents</i>	
11	Constructive Convex Optimisation	286
	<i>Josef Berger and Gregor Svindland</i>	286
	11.1 Introduction	286
	11.2 Some Definitions and Notation	286
	11.3 Convexity and Existence of Infima and Minima	288
	11.4 Convexity and Brouwer's Fan Theorem	290
	11.5 Lemmas of the Alternative and Consequences	294
	<i>References</i>	301
12	Constructive Mathematical Economics	302
	<i>Matthew Hendtlass and Douglas Bridges</i>	302
	12.1 Introduction	302
	12.2 Preference and Utility	302
	12.3 Demand Functions	311
	12.4 Economic Equilibrium	314
	12.5 Game Theory	325
	<i>References</i>	330
13	A Leisurely Random Walk Down the Lane of a Constructive Theory of Stochastic Processes	333
	<i>Yuen-Kwok Chan</i>	333
	13.1 Stochastic Process, in a Nutshell	333
	13.2 Constructive Mathematics, in a Nutshell	339
	13.3 Stochastic Processes, in a Bigger Nutshell	346
	13.4 Constructive Theory of Stochastic Processes, in an Even Bigger Nutshell	349
	13.5 Concluding Remarks	355
	<i>References</i>	355
	Part IV Topology	
14	Bases of Pseudocompact Bishop Spaces	359
	<i>Iosif Petrakis</i>	359
	14.1 The Problem of Constructivising General Topology	359
	14.2 Overview of Recent Work on Bishop Spaces	365
	14.3 Structure of the Technical Part of this Chapter	366
	14.4 Basic Notions in the Theory of Bishop Spaces	367
	14.5 Bases of Bishop Spaces	374
	14.6 The First Base Theorem	377
	14.7 The Second Base Theorem	379
	14.8 Applications of the Second Base Theorem	382
	14.9 Concluding Remarks	389

<i>Contents</i>		ix
	<i>Acknowledgements</i>	391
	<i>References</i>	391
15	Bishop Metric Spaces in Formal Topology	395
	<i>Tatsuji Kawai</i>	395
	15.1 Introduction	395
	15.2 Formal Topology	397
	15.3 Functorial Embedding of Locally Compact Metric Spaces	401
	15.4 Located Subsets in Formal Topology	407
	15.5 Pointfree Characterisation of Compact Metric Spaces	414
	15.6 Pointfree Characterisation of Locally Compact Metric Spaces	416
	15.7 Beyond Locally Compact Metric Spaces	421
	15.8 Related Works	423
	<i>References</i>	423
16	Subspaces in Pointfree Topology: Towards a New Approach to Measure Theory	426
	<i>Francesco Ciraulo</i>	426
	16.1 Introduction	426
	16.2 Pointfree Parts of the Real Line	427
	16.3 A Measure on σ -Sublocales	434
	16.4 The Pointfree Approach to the Real Line	441
	16.5 Concluding Remarks	442
	<i>References</i>	443
17	Synthetic Topology	445
	<i>Davorin Lešnik</i>	445
	17.1 Introduction	445
	17.2 Topological Properties	452
	17.3 Principles	462
	<i>References</i>	481
18	Apartness on Lattices and Between Sets	483
	<i>Douglas Bridges</i>	483
	18.1 Introduction	483
	18.2 Lattices	484
	18.3 Apartness on Frames	490
	18.4 Frame Topologies	492
	18.5 Join Homomorphisms and Continuity	496

x	<i>Contents</i>	
	18.6 Set–Set Pre-apartness	501
	18.7 Strong and Uniform Continuity	504
	18.8 Compactness	508
	18.9 Concluding Remarks	511
	<i>Acknowledgement</i>	511
	<i>References</i>	511
	 Part V Logic and Foundations	
19	Countable Choice	515
	<i>Fred Richman</i>	515
	19.1 Axioms of Choice	515
	19.2 Living without Countable Choice	517
	19.3 The Fundamental Theorem of Algebra	518
	19.4 Completions	519
	19.5 The Ascending Tree Condition	520
	19.6 Bishop’s Principle and the λ -Technique	521
	<i>References</i>	523
20	The Minimalist Foundation and Bishop’s Constructive Mathematics	525
	<i>Maria Emilia Maietti and Giovanni Sambin</i>	525
	20.1 Introduction	525
	20.2 Why Adopt a Minimalist Foundation?	528
	20.3 The Minimalist Foundation	530
	20.4 Why Adopting the Pointfree Approach to Develop Topology in MF?	543
	20.5 Extending MF with choice principles	555
	20.6 Concluding Remarks	557
	<i>Acknowledgements</i>	558
	<i>References</i>	558
21	Identity, Equality, and Extensionality in Explicit Mathematics	564
	<i>Gerhard Jäger</i>	564
	21.1 Introduction	564
	21.2 The Basic Axiomatic Operational Framework	565
	21.3 Adding Elementary Classes	569
	21.4 About Some Ontological Aspects of EC and EC ⁺	572
	21.5 Abstract Data Structures	575
	21.6 The Number Systems \mathbb{N} , \mathbb{Z} , and \mathbb{Q} as Abstract Data Structures	577
	21.7 Representing the Real Numbers	580
	<i>References</i>	582

<i>Contents</i>		xi
22	Inner and Outer Models for Constructive Set Theories	584
	<i>Robert S. Lubarsky</i>	584
	22.1 Introduction	584
	22.2 Heyting Models, or Constructive Forcing	586
	22.3 Kripke Models	594
	22.4 Heyting–Kripke Models	611
	22.5 Classical Outer Models	616
	22.6 Inner Models	619
	22.7 A Final Example	624
	<i>References</i>	633
23	An Introduction to Constructive Reverse Mathematics	636
	<i>Hajime Ishihara</i>	636
	23.1 Introduction	636
	23.2 A Formal System	637
	23.3 Continuity Properties	642
	23.4 Compactness Properties	648
	23.5 The Monotone Completeness Theorem	653
	23.6 Concluding Remarks	656
	<i>References</i>	658
24	Systems for Constructive Reverse Mathematics	661
	<i>Takako Nemoto</i>	661
	24.1 Introduction	661
	24.2 Preliminary	663
	24.3 Function-Based Language and Systems	669
	24.4 Base Theory with the Strength of ACA_0	682
	24.5 Base Theory with the Strength of RCA_0	689
	24.6 Base Theory with the Strength of RCA_0^*	690
	24.7 Appendix: Proof of Lemma 24.27 and Lemma 24.28	693
	<i>References</i>	698
25	Brouwer’s Fan Theorem	700
	<i>Josef Berger</i>	700
	25.1 Introduction	700
	25.2 Notation	701
	25.3 The Weak König Lemma	702
	25.4 The Fan Theorem	705
	25.5 The Uniform Continuity Theorem	707
	25.6 The Fan Theorem for c-sets	709
	<i>References</i>	711

	Part VI Aspects of Computation	
26	Computational Aspects of Bishop's Constructive Mathematics	715
	<i>Helmut Schwichtenberg</i>	715
	26.1 Partial Continuous Functionals	716
	26.2 A Term Language for Computable Functionals	724
	26.3 A Theory of Computable Functionals	727
	26.4 Computational Content of Proofs	734
	26.5 Applications	747
	<i>References</i>	747
27	Application of Constructive Analysis in Exact Real Arithmetic	749
	<i>Kenji Miyamoto</i>	749
	27.1 Introduction	749
	27.2 Preliminaries	751
	27.3 Applications	761
	27.4 Concluding Remarks	773
	<i>References</i>	774
28	Efficient Algorithms from Proofs in Constructive Analysis	777
	<i>Mark Bickford</i>	777
	28.1 Introduction	777
	28.2 Representation of Real Numbers	779
	28.3 Nuprl Representation of Real Numbers	781
	28.4 Some Type Theory	786
	28.5 Extracts of Proofs by Induction	788
	28.6 Inverse, Division, and Computation	790
	28.7 Completeness	792
	28.8 Constructing k th Roots	793
	28.9 Computing Power Series	797
	28.10 $\sin(x)$, $\cos(x)$, and e^x	798
	28.11 $\ln(x)$ and $\arcsin(x)$	799
	28.12 Computing π and $\arctan(x)$	801
	28.13 Constructive Content of Brouwer's Principles	803
	28.14 Concluding Remarks	804
29	On the Computational Content of Choice Principles	806
	<i>Ulrich Berger and Monika Seisenberger</i>	806
	29.1 Introduction	806
	29.2 A Semi-constructive System with Computational Content	807
	29.3 Realizable and Unrealizable Choice Principles	812

	<i>Contents</i>	xiii
29.4	Countable Choice and Classical Logic	818
29.5	Conclusion	821
	<i>References</i>	822
	<i>Index</i>	826
