

Index

- A , → longitudinal integral of R
 a_c , → correlation length of R
 ACF, → auto-correlation function
 A_H , → longitudinal integral of R_H
 a_{Hc} , → correlation length of R_H
 a^{-1} , → corner wavenumber of P
 A_L , → longitudinal integral of R_L
 α , → P-wave velocity
 aligned line cracks, 156
 analytic signal, 87
 angular brackets, 16, 46
 angular spectrum function, ASF
 scalar waves, 53
 vector waves, 118
 angular spectrum function, spectrum division, ASF^L
 scalar waves, 131
 vector waves, 146
 anisotropy of randomness, 156
 ASF, → angular spectral function
 attenuation factor, 7
 auto-correlation function, 45, 46

 basalt and harzburgite, 157
 basic scattering pattern, $X_{**}^*(\theta, \phi)$, 102
 β , → S-wave velocity
 Bethe–Salpeter equation, 58, 65
 Birch's law, 102
 body force, 94
 body-Rayleigh wave coupling, 155
 Boltzmann transport equation, 58
 Born approximation
 applicable condition, 44
 scalar waves, 39
 vector waves, 94, 97
 Bourret approximation, 65
 $\langle \cdots \rangle$, → ensemble average

 c , → radius of a high velocity sphere
 cascade, 13
 CDF, → cumulative distribution function
 CDF^{-1} , → inverse function of CDF

 change in the set of base unit vectors, 29, 72, 80, 104,
 119, 128, 132, 143, 147
 closure relation, 67
 coda interferometry, 9
 coda waves, 1
 coda attenuation, 7
 coda normalization, 4, 7
 common decay curve, 1, 4
 cross-correlation analysis, 9
 duration magnitude, 2
 isotropic scattering model, 7
 single back-scattering model, 2, 61
 temporal change in coda attenuation, 10
 uniform distribution, 4, 136
 coefficient of variation, CV, 32
 comparison of MC and analytic solution
 anisotropic scattering, Legendre, 74
 isotropic scattering, Fourier, 31
 isotropic scattering, Legendre, 70
 Markov app., 83
 comparison of MC and FD
 scalar waves, Born app., 91
 scalar waves, spectrum division, 138
 vector waves, Born app., 116
 vector waves, spectrum division, 151
 consolidation process, 156
 continuity equation, 35, 95
 convolution, 16, 38, 56, 78
 \otimes_s , → convolution in space
 \otimes_{st} , → convolution in space and time
 \otimes_t , → convolution in time
 corner wavenumber, a^{-1} , 11, 47
 correlation length, a_c , 47, 125, 141
 cr , → $\varepsilon_H^2 a_{Hc}^2 l_0^2$ for vector and $\varepsilon_H^2 a_{Hc}^2 k_0^2$ for scalar,
 spectrum division
 cracks and voids, 156
 cumulative distribution function, CDF, 26, 81
 cut-off angle, 123, 140
 CV, → coefficient of variation

 delta function, 19, 38, 59, 94

- delta function in solid angle space, δ_Ω , 60
 δf_i , \rightarrow equivalent body force
 ΔL , \rightarrow side length of the cubic receiver of MC simulation
 Δr , \rightarrow thickness of the receiver shell of MC simulation
 Δt , \rightarrow time step of MC simulation
 Δt_{FD} , \rightarrow time step of FD simulation
 Δx , \rightarrow volume of receiver cube in MC simulation
 Δx_{FD} , \rightarrow grid spacing of FD simulation
 differential scattering cross-section, 17, 35
 scalar waves, Born, 40, 49
 vector waves, Born, 104
 diffusion approximation, 50, 62
 diffusion equation, 63
 diffusion regime, 25, 64, 84
 diffusivity
 anisotropic, 63
 isotropic, 25
 digital recording system, 3
 directional distribution of energy density, M , 58
 discrete sine transform, DST, 23, 70
 dissipation of energy, 13
 $\frac{d\sigma}{d\Omega}$, \rightarrow differential scattering cross-section
 DST, \rightarrow discrete sine transform
 duration magnitude, 1
 Dyson equation, 65

 E , \rightarrow energy density
 effective isotropic scattering coefficient, 64
 effective scattering cross-section, 43
 Eikonal approximation, 52
 scalar waves, 40
 vector waves, 117
 Eikonal approximation, spectrum division
 scalar waves, 128, 131
 vector waves, 145
 elastic medium
 homogeneous, 94
 inhomogeneous, 95
 elliptic theta function, 78
 energy conservation, 35, 62
 scalar waves, 79
 vector waves, 95
 energy density, 18
 scalar waves, 35, 87
 vector waves, 95, 97
 energy flux density, 18
 energy flux density vector
 scalar waves, 35
 vector waves, 95, 97
 ensemble, 46
 ensemble average, 16, 45, 46
 envelope broadening, 5, 8, 78, 84
 characteristic time, 78
 ε , \rightarrow velocity anomaly, or RMS fractional fluctuation, $\sqrt{R(0)}$
 ε_H , \rightarrow RMS fractional fluctuation $\sqrt{R_H(0)}$
 equipartition state, 9

 equivalent body force, δf_i , 96
 ergodic, 46
 Error function, 27, 81, 120
 η , \rightarrow tuning parameter of the spectrum division
 $\{e_\theta, e_\phi, e_r\}$, \rightarrow set of base unit vectors in spherical coordinates
 Euler-Gamma constant, 130
 e_ν , \rightarrow polarization direction of scattered S wave
 $e_{\nu_{Rad}}$, \rightarrow polarization direction of radiated S wave from the PSD source
 exchanged wavenumber, 105
 exchanged wavenumber, 39, 49, 98
 $\{e_x, e_y, e_z\}$, \rightarrow set of Cartesian base unit vectors
 expansion formula of Bessel function, 129
 exponential distribution, 27
 exponential-type random media, 47

 f , \rightarrow scattering amplitude of scalar waves or frequency
 far field, 39
 fast Fourier transform, FFT, 23, 85
 f^B , \rightarrow scalar Born scattering amplitude
 F_*^{B**} , \rightarrow vector Born scattering coefficient
 FD, \rightarrow finite difference simulation
 FD simulation scheme
 scalar waves, 89
 vector waves, 114
 f^E , \rightarrow scalar Eikonal scattering amplitude
 Feynman and Kac formula, 84
 FFT, \rightarrow fast Fourier transform
 finite difference simulation, FD, 8, 85, 89, 114, 151
 forward scattering, 43
 Fourier integral, 22
 Fourier transform, 15, 22, 23, 42, 70
 fractal, 156
 fractional fluctuation, 34
 fractional mass-density fluctuation, 45
 fractional velocity fluctuation, 45
 Fraunhofer zone, 39
 Fresnel integral, 43
 Fresnel zone, 41

 G , \rightarrow Green's function
 G_0 , \rightarrow direct propagator with scattering loss
 g_0 , \rightarrow total scattering coefficient
 G_1 , \rightarrow Green's function, single scattering approximation
 $G_{w0,ik}$, \rightarrow vector-wave Green's function
 $G_{w0,ik}^{F*}$, \rightarrow vector-wave far-field Green's function
 G_{w0} , \rightarrow scalar-wave Green's function
 Γ_2 , \rightarrow two-frequency mutual coherence function, TFMCF
 Γ_\perp , \rightarrow MCF at different \mathbf{x}_\perp
 Γ_ω , \rightarrow MCF at different ω
 Gaussian random variable, 52, 131
 Gaussian-type random media, 48
 G_{Diff} , \rightarrow Green's function, truncated diffusion solution
 generation of a random number, \sim , 26

- geometrical ray theory, 119
 G_H , → propagator in a homogeneous medium
 G_i , → i -th comp. vector Green's function for energy density
 g_{iso} , → isotropic scattering coefficient
 g_l , → effective scattering coefficient using the cut-off angle
 G_M , → Markov Green's function
 G_{M0} , → Markov Green's function without travel-time fluctuation
 G_{Pa} , → Green's function for isotropic scattering, Paasschens approximation
 Green's function
 Markov approximation, 77
 scalar waves, 38
 vector waves, 94
 G_s , → convolution of G and the source time function s
 $g(\theta)$, → scattering coefficient
 $g^*(\theta, \phi)$, → vector scattering coefficient
 Hi-net, 3
 high wavenumber spectral component, 124, 140
 high-frequency energy radiation, 33
 high-velocity sphere, 35, 42
 \mathcal{H} , → Hilbert transform
 Hilbert transform, 87
 Hurst exponent, 48
 hybrid MC simulation with the spectrum division
 scalar waves, 124
 vector waves, 140
 I , → wave intensity
 igneous rocks, 157
 imaginary Error function, 88
 impedance, 101
 independent scattering assumption
 scalar waves, 64
 vector waves, 107
 independent scattering assumption, spectrum division
 scalar waves, 127
 vector waves, 143
 instantaneous amplitude, A_{inst} , 87
 integral-differential equation, 62
 intensity
 scalar waves, 56, 77, 87
 intrinsic absorption, 7
 intrinsic absorption Q_l^{-1} , 11, 33, 155
 inverse transform sampling method, 26, 71, 80
 isotropic differential scattering cross-section, 19
 isotropic radiation, 28, 59
 isotropic scattering coefficient, 7, 10, 19
 isotropic scattering medium, 19
 isotropic scattering model, 19
 coefficient of variation, 32
 J_l , → energy flux density vector
 Jordan's lemma, 59
 k_0 , → scalar wavenumber or vector P-wavenumber
 κ , → order of von Kármán-type random media
 Kolmogorov spectrum, 13, 48
 l_0 , → vector S-wavenumber
 Lagrange derivative, 59
 Lamé coefficients, 94, 95
 λ , → Lamé coefficient, or wavelength
 λ_S , → S-wavelength
 Legendre expansion method, 66, 74
 Legendre polynomials, 36
 linear polarization of S-wave, 103, 143
 linear relation among three fractional fluctuations, 101
 lithosphere, 11, 102
 longitudinal integral of R , A , 53, 77
 longitudinal integral of R_L , A_L , 129
 low wavenumber spectral component, 125, 141
 M , → directional distribution of energy density
 m , → wavenumber
 M_0 , → moment function
 \dot{M}_0 , → moment rate function
 marble cake mantle model, 157
 Markov approximation, 8, 77
 characteristic time, 78
 Markov Green's function, 77, 83
 Mars-quake, 8
 MC, → Monte Carlo simulation
 MC simulation
 isotropic scattering, 29
 scalar waves, Born app., 72
 scalar waves, Eikonal app., 81
 scalar waves, spectrum division, 132
 vector waves, Born app., 111
 vector waves, spectrum division, 147
 MCF, → mutual coherence function
 mean free path, 18, 27, 50
 mean free time, 18, 27, 50
 mean square velocity amplitude, 4
 MFP, → mean free path
 MFT, → mean free time
 modified Bessel function, 47
 moment rate function, \dot{M}_0 , 115
 moment tensor, M_{pq} , 109
 Monte Carlo simulation, 29, 72, 81
 Moon, 11, 33
 Moonquake, 2
 moving base unit vectors, 29, 104
 moving time average, 87
 M_{pq} , → moment tensor
 MS, → mean square
 MS fractional velocity fluctuation, ε^2 , 11
 μ , → Lamé coefficient or $\cos \psi$
 Multi-scaling method, 58
 multiple isotropic scattering model, 21, 33
 multiple lapse-time window analysis, 7, 33
 mutual coherence function
 Γ_{\perp} , 52, 131
 Γ_{ω} , 55

- n , → number density of scatterers
 narrow ray-bending angle, 42
 narrow-angle ray-bending, 42
 narrow-angle ray-bending, spectrum division
 scalar waves, 132
 vector waves, 146
 $\{\mathbf{n}_1, \mathbf{n}_2, \mathbf{n}_3\}$, → set of moving base unit vectors
 normal distribution, 55, 131, 132
 ν , → ratio of mass fractional fluctuation to velocity
 fractional fluctuation
 number density, 18, 19

 optical theorem, 43

 Paasschens approximation, 25
 parabolic approximation, 8, 40, 77
 partial integration, 98
 PDF, → probability density function, PDF
 narrow ray-bending angles, 80, 118
 PSD radiation angles, 111
 scattering angle, 71
 travel distance fluctuation, 81, 120
 PDF, spectrum division
 narrow ray-bending angle, scalar waves, 132
 narrow ray-bending angle, vector waves, 146
 scattering angles, scalar waves, 128
 scattering angles, vector waves, 145
 travel distance fluctuation, scalar waves, 132
 travel distance fluctuation, vector waves, 147
 peak delay time, 5, 78
 P_H , → high wavenumber component of P
 phase shift, 44, 126, 141
 $\Phi(\phi)$, → PDF of angle ϕ
 ϕ_R , → random phase
 P_L , → long wavenumber component of P
 point shear dislocation source, PSD, 93, 109
 point-like scatterer, 17
 Poisson solid, 101
 polarization direction of radiated S wave, \mathbf{e}_{Rad} , 110
 polarization direction of scattered S waves, \mathbf{e}_s , 103
 power spectral density function, 2, 11, 12, 45, 47
 power-law decay, 11, 12, 47, 157
 power-law spectral range, 124
 Pr , → probability
 PRNG, → pseudo-random number generator
 isotropic radiation angles, 28
 narrow ray-bending angle, 80
 scattering angle, 72, 108, 109
 shot time, 27
 travel distance fluctuation, 81, 120
 PRNG, spectrum division
 narrow ray-bending angles, scalar waves, 132
 narrow ray-bending angles, vector waves, 147
 scattering angles, scalar waves, 128
 scattering angles, vector waves, 145
 travel distance fluctuation, scalar waves, 132
 travel distance fluctuation, vector waves, 147

 probabilistic interpretation, 71, 108
 probability density function, PDF, 26, 108
 probability integral transform, 26
 probability of scattering occurrence, 71
 Probit function, 27
 projection approximation, 41, 52, 80, 118
 prolate spheroidal coordinates, 20, 61
 propagation velocity, 18
 PS scattering, 97
 PSD source, → point shear dislocation source
 PSDF, → power spectral density function
 pseudo-random number generator, 16, 26
 p_X , → probability density function

 \mathbf{q} , → direction of energy flux density
 Q_c^{-1} , → coda Q^{-1}
 Q_I^{-1} , → intrinsic Q^{-1}
 quadratic form, 130
 quasi-monochromatic wave, 77
 Quaternary volcano, 7

 R , → auto-correlation function
 radar equation, 2
 radiated energy
 PSD source, 111
 radiation pattern
 isotropic source, 28
 PSD source, 110
 radiative transfer equation, RTE, 9
 radiative transfer theory, RTT, 2, 58
 random elastic media, 9, 93
 random fractional velocity fluctuation, 11
 random function, 46
 random media, 44, 46, 48
 exponential-type, 47, 51, 74, 76
 Gaussian-type, 8, 48, 52, 54, 78, 80, 83
 realization, 85, 86
 von Kármán-type, 11, 47, 50, 64, 79, 85, 124
 random number, 26
 random phase, $\phi_R(m)$, 85
 Rayleigh distribution, 54, 118, 131, 146
 realization of random media, 89
 recurrence formula, 37, 68
 recurrent scattering, 64
 reference wavenumber
 S wave, 140
 scalar waves, 124
 refractive index, 13
 rejection sampling method, 26, 71, 108
 RG_{st}^* , → PRNG of shot time
 R_H , → high wavenumber component of R
 ρ , → mass density
 Ricker wavelet, 88
 R_L , → long wavenumber component of R
 RMS, → root mean square
 RMS velocity amplitude, 5, 114, 116, 151

- RTE, \rightarrow radiative transfer equation
 scalar waves, 62
 scalar waves, spherical, 66
 vector waves, 93
 $RG_{\theta, \phi}^{**}$, \rightarrow PRNG of scattering angles (θ, ϕ)
 RTT, \rightarrow radiative transfer theory
- scalar wave equation
 homogeneous, 38
 inhomogeneous, 34
 scattering amplitude
 scalar waves, 35–37
 scalar waves, Born, 39, 40, 99
 scalar waves, Eikonal, 42
 vector waves, Born, 97, 98
 scattering angle, 17, 60
 scattering attenuation, 8
 scattering coefficient, 18
 scalar waves, Born, 49, 50, 61, 64, 71
 vector waves, Born, 105
 scattering coefficient, spectrum division
 scalar waves, 126, 127
 vector waves, 141
 scattering medium, 18
 scattering occurrence, 27
 sedimentation process, 156
 seismic moment function, M_0 , 109
 s^G , \rightarrow Gaussian source time function
 σ_0 , \rightarrow total scattering cross-section
 simultaneous linear equations, 70
 single back-scattering model, 21, 61
 single scattering approximation
 anisotropic, 60
 isotropic, 19
 single scattering ray path, 60
 site amplification factor, 7
 source radiation energy, 8
 source time function, 71
 delta, 23
 Gaussian, 23, 27
 Küpper, 115
 Ricker, 88
 spatial average, over-bar, 45
 spatial grid spacing of FD simulation, 114
 specific intensity, 59
 spectral envelope, 12
 spectrum division
 scalar waves, 123
 vector waves, 140
 spherical Bessel function, 15, 36
 spherical coordinates, 99
 spherical harmonic closure relation, 60
 spherical trigonometry, 65
 spherical-shell receiver window, 30, 73, 82, 133
 spherically symmetric system, 65
 s^{PSD} , \rightarrow PSD source time function
 s^R , \rightarrow Ricker source time function
 SS scattering amplitude, 103
- ST, \rightarrow stochastic test function
 stationary random function, 46
 statistical characterization, 46
 stochastic ray-path method, 84
 stochastic test function, ST, 27
 stress tensor, 95
 subscript tr , \rightarrow transport scattering
 subscript/superscript H, \rightarrow high-wavenumber component
 subscript/superscript L, \rightarrow long-wavenumber component
 superscript *iso*, \rightarrow isotropic scattering
 superscript B, \rightarrow Born approximation
 superscript E, \rightarrow Eikonal approximation
 superscript G, \rightarrow Gaussin-type
 superscript PP, \rightarrow vector PS scattering
 superscript PS, \rightarrow vector PS scattering
 superscript SP, \rightarrow vector SP scattering
 superscript SS, \rightarrow vector SS scattering
 surface topography, 13
- tectonic stress, 156
 TFMCF, \rightarrow two-frequency mutual coherence function
 $\Theta(\theta)$, \rightarrow PDF of angle θ
 three-component velocity seismogram envelopes, 93
 three-component velocity seismograms, 2
 $T_{ij}(\theta, \phi)$, \rightarrow rotation matrix
 time step of FD simulation, Δt_{FD} , 115
 t_M , \rightarrow characteristic time of the Markov approximation
 torsional rotation, 103, 110, 143
 total scattering coefficient
 vector waves, Born, 106
 scalar waves, Born, 50
 total scattering coefficient, spectrum division
 scalar waves, 126
 vector waves, 143
 total scattering cross-section, 17, 37
 analytic solution, 37
 scalar waves, Born, 40
 scalar waves, Eikonal, 44
 transform matrix, T_{ij} , 29
 transform matrix, U_{ij} , 104
 transport mean free path, 50
 transport mean free time, 50, 63
 transport scattering coefficient, 11, 63
 scalar waves, Born, 50
 scalar waves, spectrum division, 126
 transverse coordinate, 40
 transverse Laplacian, 77
 travel distance fluctuation
 scalar waves, 81
 vector waves, 119
 travel distance fluctuation
 scalar waves, 57
 travel time fluctuation, 56, 78
 truncated diffusion solution, 25, 64

tuning parameter, ζ or η scalar waves, 125 vector waves, 141	velocity seismograms, 3
turbulence air, 13	volcanic fields, 4, 33
turbulent atmosphere, 2	volcanism, 157
two-frequency mutual coherence function, TFMCF, 77	von Kármán-type random media, 47
u , \rightarrow scalar wave	$V(\mathbf{x})$, \rightarrow inhomogeneous velocity
$U_{ij}(\theta, \phi)$, \rightarrow torsional rotation matrix	W , \rightarrow total radiated energy
Uniform[0,1], \rightarrow uniform PRNG between 0 and 1	well logs, 2, 46, 101
ν , \rightarrow torsional rotation angle	W_P , \rightarrow total radiated P-energy
u^R , \rightarrow Ricker source time function in the wave domain	W_S , \rightarrow total radiated S-energy
u_i , \rightarrow displacement vector	w_t^* , \rightarrow travel-time fluctuation
V_0 , \rightarrow average propagation velocity	w_z^* , \rightarrow travel-distance fluctuation
vector wave equation	X_*^{**} , \rightarrow basic scattering pattern
homogeneous elastic medium, 94	$\xi(\mathbf{x})$, \rightarrow random function
inhomogeneous elastic medium, 95	$Z_{\theta, \phi}^{**}$, \rightarrow PDF of vector scattering angles (θ, ϕ)
	ζ , \rightarrow tuning parameter of the spectrum division
