

## The Cambridge Handbook of Construction Grammar

Construction Grammar is one of the fastest-growing branches of functional syntax. Bringing together an international team of scholars, this handbook provides a complete overview of the current issues and applications in this approach. Divided into six thematic parts, it covers the fundamental notions of Construction Grammar, its conceptual origins and the basic ideas that unite its various branches, its solid empirical grounding and affinities with corpus linguistics, and the diverse perspectives in constructional scholarship. It highlights advances in discourse-related topics and applications to various domains, including multimodal communication, language learning and teaching, and computational linguistics, and each chapter contains numerous illustrative examples and case studies involving a variety of languages. It also includes in-depth, empirically grounded analyses of diverse theoretical, methodological, and interdisciplinary issues, alongside step-by-step introductions to the theory, making it essential reading for both researchers and students working in functional and cognitive approaches to linguistic analysis and syntactic theory.

MIRJAM FRIED is Adjunct Professor of Linguistics at Charles University. She is the co-founder of the book series *Constructional Approaches to Language* (2002) and the journal *Constructions and Frames* (2009).

KIKI NIKIFORIDOU is Professor of Linguistics at the National and Kapodistrian University of Athens. She is co-founder and co-editor of the journal *Constructions and Frames* (2009 to 2020).

## CAMBRIDGE HANDBOOKS IN LANGUAGE AND LINGUISTICS

Genuinely broad in scope, each handbook in this series provides a complete state-of-the-field overview of a major sub-discipline within language study and research. Grouped into broad thematic areas, the chapters in each volume encompass the most important issues and topics within each subject, offering a coherent picture of the latest theories and findings. Together, the volumes will build into an integrated overview of the discipline in its entirety.

# Acknowledgments

The handbook will provide a systematic review of major topics representing current research in Construction Grammar, including new themes and trends in developing the constructional approach to language. Collectively, the contributions offer in-depth, empirically grounded exemplification and analyses of diverse theoretical, methodological, and interdisciplinary issues that have been encountered so far; demonstrate the expansion of constructional research beyond the mostly English-based linguistic material of the early days; and present open questions and new challenges for further development of the framework. Due to its broad and systematic coverage of actively pursued themes and topics within the ever-growing constructional research community, we intend this handbook to function both as a true reference manual for students and as an important reference for constructional scholars.

The volume is obviously the result of truly collective effort. First of all, our heartfelt thanks are due to the authors of individual chapters – our colleagues and highly respected figures in the constructional as well as more broadly cognitive linguistic community. Without their willingness to take on this important task, their expert knowledge, their dedication to this project and diligent work throughout, we could not have dreamed of putting this handbook together and delivering the quality we were committed to. Finally, we would like to thank the reviewers of the individual chapters for their valuable feedback and their time; their contribution is greatly appreciated.

Needless to say, our sincere thanks and gratitude go also to our extremely friendly and helpful support ‘team’ at Cambridge University Press: Helen Barton, the Commissioning Editor for Language and Linguistics, and her Assistant, Isabel Collins. Helen, who invited us to this project in the first place, provided editorial guidance and encouragement throughout, and Isabel’s expertise in the finer editorial points of preparing the manuscript as well as patience was indispensable. It was a real pleasure to work with both.
