Preface *page* xv

1 Graphs 1

1.1 Strongly regular graphs 1
1.1.1 Parameters 2
1.1.2 Complement 2
1.1.3 Imprimitivity 2
1.1.4 Spectrum 3
1.1.5 Rank 3 permutation groups 3
1.1.6 Local graphs 4
1.1.7 Johnson graphs 4
1.1.8 Hamming graphs 5
1.1.9 Paley graphs 5
1.1.10 Strongly regular graphs with smallest eigenvalue −2 5
1.1.11 Seidel switching 8
1.1.12 Regular two-graphs 9
1.1.13 Regular partitions and regular sets 9
1.1.14 Inequalities for subgraphs 10
1.1.15 Connectivity 14
1.1.16 Graphs induced on complementary subsets of the vertex set of a graph 15
1.1.17 Enumeration 15
1.1.18 Prolific constructions 17
1.2 Distance-regular graphs 17
1.2.1 Distance-transitive graphs 19
1.2.2 Johnson graphs 19
1.2.3 Hamming graphs 19
1.2.4 Grassmann graphs 19
1.2.5 Van Dam-Koolen graphs 20
1.2.6 Imprimitive distance-regular graphs 20
1.2.7 Taylor graphs 21

Table of Contents
More Information

1.3 Association schemes and coherent configurations 21
1.3.1 Association schemes 21
1.3.2 The Bose-Mesner algebra 22
1.3.3 Linear programming bound and code-clique theorem 23
1.3.4 Krein parameters 25
1.3.5 Euclidean representation 27
1.3.6 Subschemes 27
1.3.7 Absolute bound and μ-bound 29
1.3.8 Coherent configurations 30

2 Polar spaces 33
2.1 Polar spaces 33
2.2 Embedded polar spaces 34
2.2.1 Projective spaces 34
2.2.2 Definition of embedded polar spaces 35
2.2.3 Rank and radical 35
2.2.4 Maximal singular subspaces 36
2.2.5 Order of an embedded polar space 36
2.2.6 Parameters of the polar space strongly regular graphs 39
2.2.7 Ovoids, spreads, m-systems, h-ovoids, hemisystems 40
2.2.8 Intriguing or regular sets; i-tight sets 41
2.2.9 Distance-regular graphs on singular subspaces 42
2.2.10 Generalized quadrangles 43
2.2.11 Strongly regular graphs on the lines 43
2.2.12 Distance-regular graphs on half of the maximal singular subspaces 44
2.3 Classification of finite embedded polar spaces 44
2.3.1 Residues 44
2.3.2 Reduction to rank 2 45
2.3.3 The finite rank 2 polar spaces in 3-space 46
2.3.4 The finite embedded generalized quadrangles 48
2.3.5 Summary 49
2.3.6 Group orders 50
2.4 Witt's theorem 52
2.4.1 Reflexive forms 52
2.4.2 Reflexive forms and embedded polar spaces 52
2.4.3 Classification of sesquilinear reflexive forms 53
2.4.4 Orthogonal direct sum decomposition 54
2.4.5 Witt's theorem 55
2.5 Symplectic polar spaces 56
2.5.1 Symplectic forms, polar spaces, and graphs 56
2.5.2 Parameters 57
2.5.3 Automorphism groups 57

Table of Contents
More Information

2.5.4 Maximal cliques 58
2.5.5 Ovoids 58
2.5.6 Maximal cocliques 60
2.5.7 h-Ovoids 61
2.5.8 Spreads 61
2.5.9 Tight sets 61
2.5.10 Local graph 62
2.6 Orthogonal polar spaces 62
2.6.1 Quadratic forms and orthogonal polar spaces 62
2.6.2 Finite orthogonal polar spaces and graphs 63
2.6.3 Parameters 64
2.6.4 Isomorphisms 65
2.6.5 Automorphism groups 65
2.6.6 Maximal cliques 66
2.6.7 Ovoids and maximal cocliques 66
2.6.8 Tight sets, spreads, and h-ovoids 75
2.7 Hermitian or unitary polar spaces 77
2.7.1 Hermitian forms 77
2.7.2 Hermitian or unitary polar spaces 77
2.7.3 Finite unitary polar spaces and graphs 78
2.7.4 Parameters 79
2.7.5 Isomorphisms 79
2.7.6 Automorphism groups 79
2.7.7 Maximal cliques 80
2.7.8 Maximal cocliques 80
2.7.9 Tight sets 82
2.7.10 Partial spreads 83
2.7.11 Hemisystems 83

3 Graphs related to polar spaces 84
3.1 Graphs on the nonsingular or nonisotropic points 84
3.1.1 Association scheme in even characteristic 84
3.1.2 Nonsingular points over $\mathbb{F}_2$ 85
3.1.3 Nonsingular points of one type over $\mathbb{F}_3$ in dimension $2m$ 86
3.1.4 Nonsingular points of one type in dimension $2m + 1$ 86
3.1.5 Nonsingular points of one type over $\mathbb{F}_5$ in dimension $2m + 1$ 89
3.1.6 Nonisotropic points for a Hermitian form 89
3.2 Graphs on half of the maximal singular subspaces 91
3.2.1 General observations 91
3.2.2 The rank 4 case: the triality quadric 92
3.2.3 Rank 5 hyperbolic polar spaces 95
3.2.4 Disjoint t.i. planes in $\mathsf{O}_7(q)$ and $\mathsf{Sp}_6(q)$ 97
3.3 Affine polar graphs 98

Table of Contents
More Information

3.3.1 Isotropic directions 98
3.3.2 Square directions 101
3.3.3 Affine half spin graphs 101
3.4 Forms graphs 107
3.4.1 Bilinear forms graphs 107
3.4.2 Alternating forms graphs 108
3.4.3 Quadratic forms graphs 109
3.4.4 Hermitian forms graphs 109
3.4.5 Baer subspaces 110
3.4.6 A hyperoval at infinity 110
3.5 Grassmann graphs 111
3.5.1 Lines in a projective space 111
3.6 The case $q = 2$ 112
3.6.1 Local structure 112
3.6.2 Symmetric groups 113

4 Buildings 114
4.1 Geometries 114
4.1.1 Generalized polygons 115
4.1.2 Diagrams 116
4.1.3 Simple properties 117
4.1.4 Shadow geometries 117
4.2 Coxeter systems 118
4.3 Coxeter geometries 120
4.4 Coxeter geometries of types A_n, D_n and E_6 122
4.5 Buildings 123
4.5.1 Generalities 123
4.5.2 Spherical buildings 125
4.5.3 Characterizations 126
4.5.4 Chain calculus 126
4.6 The Klein quadric and Klein correspondence 128
4.7 Triality 129
4.7.1 Split octonion algebras 130
4.7.2 Triality 132
4.8 A construction of $\mathsf{G}_2(q)$ 132
4.9 The $\mathsf{E}_{6,1}(q)$ graph 134
4.9.1 Parameters 134
4.9.2 Cliques, cocliques and regular sets 135
4.9.3 Construction of $\mathsf{E}_{6,1}$ 137

5 Fischer spaces 139
5.1 Definition 139
5.2 Fischer's classification 143
5.3 Hall triple systems 147

Table of Contents
More Information

5.4 Cotriangular graphs 148
5.5 Locally grid graphs 149
5.6 Copolar spaces 150
5.6.1 Hall's classification 150
5.6.2 Lax embeddings of the symplectic copolar spaces 151

6 Golay codes, Witt designs, and Leech lattice 155
6.1 Codes 155
6.1.1 The Golay codes 156
6.1.2 The Golay codes — constructions 156
6.1.3 Properties and uniqueness 158
6.1.4 The Mathieu group M_{24} 159
6.1.5 More uniqueness results 160
6.2 Designs 160
6.2.1 The Witt designs 161
6.2.2 Substructures of $S(5, 8, 24)$ 164
6.2.3 Near polygons 166
6.2.4 The geometry of the projective plane of order 4 166
6.3 Lattices 171
6.3.1 The Leech lattice 172
6.3.2 The mod 2 Leech lattice 172
6.3.3 The complex Leech lattice 173

7 Cyclotomic constructions 174
7.1 Difference sets 174
7.1.1 Two-character projective sets 174
7.1.2 Projective two-weight codes 175
7.1.3 Delsarte duality 175
7.1.4 Parameters 176
7.1.5 Complements and imprimitivity 176
7.1.6 Divisibility 177
7.1.7 Field change 177
7.1.8 Unions and differences 177
7.1.9 Geometric examples 178
7.1.10 Small two-weight codes 180
7.1.11 Sporadic two-weight codes 182
7.2 Cyclic codes 183
7.2.1 Trace representation of an irreducible cyclic code 183
7.2.2 Wolfmann's theorem 184
7.2.3 Irreducible cyclic two-weight codes 184
7.3 Cyclotomy 184
7.3.1 The Van Lint-Schrijver graphs 186
7.3.2 The Hill graph 186
7.3.3 The De Lange graphs 186

Table of Contents
More Information

7.3.4 Generalizations 186
7.3.5 Amorphic association schemes 187
7.3.6 Self-complementary graphs and Peisert graphs 187
7.4 One-dimensional affine rank 3 groups 187
7.4.1 Divisibility 187
7.4.2 Subgroups of $\Gamma L(1, q)$ with two orbits 188
7.4.3 One-dimensional affine rank 3 groups 191
7.4.4 Paley graphs 191
7.4.5 Power residue difference sets 193
7.5 Icosahedrals 194
7.5.1 Orbits of A_5 on the projective line and plane 194
7.5.2 Orbits of S_4 on the projective line 195
7.6 Bent functions 195

8 Combinatorial constructions 197
8.1 Regular Hadamard matrices with constant diagonal 197
8.1.1 Examples 198
8.1.2 Errata 199
8.2 Conference matrices and conference graphs 199
8.3 Symmetric designs 201
8.3.1 Generalities 201
8.3.2 The McFarland difference sets 201
8.4 Latin squares 202
8.4.1 Generalities 202
8.4.2 Latin square graphs 204
8.4.3 Transversal 3-designs 205
8.5 Quasi-symmetric designs 205
8.5.1 The Calderbank-Cowen inequality 206
8.5.2 Neumaier's inequality 206
8.5.3 No triangular graph 207
8.5.4 Examples 208
8.5.5 Classification 209
8.5.6 Table 210
8.5.7 Parameter conditions from coding theory 212
8.5.8 Haemers cocliques 213
8.6 Partial geometries 215
8.6.1 Examples 216
8.6.2 Enumeration 217
8.6.3 Nonexistence 217
8.6.4 The claw bound 217
8.6.5 Claws and cliques 219
8.7 Semipartial geometries 222
8.7.1 Examples of partial quadrangles 223

8.7.2 Examples of semipartial geometries 224
8.8 Zara graphs 225
8.9 Terwilliger graphs 226
8.10 Regular two-graphs 227
8.10.1 Examples 228
8.10.2 Enumeration 230
8.10.3 Completely regular two-graphs 230
8.10.4 Covers and quotients 231
8.11 Pseudocyclic association schemes 233
8.12 Tensor products of skew schemes 234
8.13 Cospectral graphs 234
8.13.1 Godsil-McKay switching 234
8.13.2 Wang-Qiu-Hu switching 235
8.14 Equiangular sets of lines 235
8.15 Spherical designs 236
8.15.1 Tight spherical designs 237
8.15.2 Spherical designs from association schemes 238
8.15.3 Bounds on the number of K_4's 239
8.16 Higher regularity conditions 239
8.16.1 The t-vertex condition 239
8.16.2 t-Isoregularity 240
8.17 Asymptotics 241
8.17.1 Graph isomorphism 241
8.17.2 Pseudo-randomness 241
8.18 Conditions in case $\mu = 1$ or $\mu = 2$ 243
8.19 Coloring 243
8.20 Graphs that are locally strongly regular 245
8.21 Dropping regularity 245
8.22 Directed strongly regular graphs 246

9 p-Ranks 249
9.1 Points and hyperplanes of a projective space 249
9.2 Graphs 249
9.3 Strongly regular graphs 250
9.4 Smith normal form 255

10 Individual graph descriptions 260
10.1 The pentagon 260
10.2 The 3×3 grid 261
10.3 The Petersen graph 261
10.4 The Paley graph on 13 vertices 262
10.5 GQ(2,2) 263
10.6 The Shrikhande graph 264
10.7 The Clebsch graph 265

10.8	The Paley graph on 17 vertices	267
10.9	The Paulus-Rozenfel'd graphs	268
10.10	The Schläfli graph	270
10.11	$T(8)$ and the Chang graphs	273
10.12	The strongly regular graphs on 29 vertices	274
10.13	The S_8 graph on 35 vertices	275
10.14	The $\mathsf{G}_2(2)$ graph on 36 vertices	276
10.15	$NO_6^-(2)$	279
10.16	The $\mathsf{O}_5(3)$ graphs on 40 vertices	280
10.17	The $\mathsf{U}_4(2)$ graph on 45 vertices	283
10.18	The rank 3 conference graphs on 49 vertices	284
10.19	The Hoffman-Singleton graph	285
10.20	The Gewirtz graph	289
10.21	$\mathsf{Sp}_6(2)$	291
10.22	The $\mathsf{G}_2(2)$ graph on 63 vertices	292
10.23	The block graph of the smallest Ree unital	293
10.24	GQ(3,5) and the hexacode	294
10.25	$VO_6^-(2)$	296
10.26	The halved folded 8-cube and $VO_6^+(2)$	296
10.27	The M_{22} graph on 77 vertices	297
10.28	The Brouwer-Haemers graph	299
10.29	$VNO_4^-(3)$ and the Van Lint-Schrijver partial geometry	301
10.30	The rank 3 conference graphs on 81 vertices	302
10.31	The Higman-Sims graph	303
10.32	The Hall-Janko graph	304
10.33	The 105 flags of PG(2,4)	309
10.34	The $\mathsf{O}_6^-(3)$ graph on 112 vertices	310
10.35	$NO_6^+(3)$	313
10.36	The $\mathsf{O}_8^-(2)$ graph on 119 vertices	314
10.37	The $\mathsf{L}_3(4).2^2$ graph on 120 vertices	315
10.38	$NO_5^-(4)$	316
10.39	$\overline{NO_8^+(2)}$	317
10.40	The S_{10} graph on 126 vertices	321
10.41	$NO_6^-(3)$	322
10.42	The Goethals graph on 126 vertices	323
10.43	The $\mathsf{O}_8^+(2)$ graph on 135 vertices	323
10.44	$NO_8^-(2)$	325
10.45	The $\mathsf{L}_3(3)$ graph on 144 vertices	325
10.46	Three $\mathsf{M}_{12}.2$ graphs on 144 vertices	326
10.47	The $\mathsf{O}_5(5)$ graphs on 156 vertices	327
10.48	The $\mathsf{U}_4(3)$ graph on 162 vertices	328
10.49	The nonisotropic points of $\mathsf{U}_5(2)$	330
10.50	A polarity of Higman's symmetric design	330
