INTRODUCTION: The Challenge of Cognitive Science	1
Overview	1
Cognitive Science: An Interdisciplinary Endeavor	1
Levels of Explanation: The Contrast between Psychology and Neuroscience	3
How Psychology Is Organized	3
How Neuroscience Is Organized	4
The Challenge of Cognitive Science	6
Three Dimensions of Variation	7
The Space of Cognitive Science	7
PART I HISTORICAL LANDMARKS	
1 The Prehistory of Cognitive Science	11
Overview	11
1.1 The Reaction against Behaviorism in Psychology	12
Learning without Reinforcement: Tolman and Honzik, “‘Insight’ in Rats” (1930)	13
Cognitive Maps in Rats? Tolman et al., “Studies in Spatial Learning” (1946)	15
Plans and Complex Behaviors: Lashley, “The Problem of Serial Order in Behavior” (1951)	16
1.2 The Theory of Computation and the Idea of an Algorithm	17
Algorithms and Turing Machines: Turing, “On Computable Numbers, with an Application to the Decision Problem” (1936–1937)	17
1.3 Linguistics and the Formal Analysis of Language	20
The Structure of Language: Chomsky’s <i>Syntactic Structures</i> (1957)	20
1.4 Information-Processing Models in Psychology	22
How Much Information Can We Handle? George Miller’s “The Magical Number Seven, Plus or Minus Two” (1956)	22
The Flow of Information: Donald Broadbent’s “The Role of Auditory Localization in Attention and Memory Span” (1954) and <i>Perception and Communication</i> (1958)	24
1.5 Connections and Points of Contact	25
Summary	26
Checklists	26
2 The Discipline Matures: Three Milestones	29
Overview	29
2.1 Language and Micro-Worlds	30
Natural Language Processing: Winograd, <i>Understanding Natural Language</i> (1972)	30
SHRDLU in Action	32

2.2	How Do Mental Images Represent?	36
	Mental Rotation: Shepard and Metzler, “Mental Rotation of Three-Dimensional Objects” (1971)	37
	Information Processing in Mental Imagery	39
2.3	An Interdisciplinary Model of Vision	41
	Levels of Explanation: Marr’s <i>Vision</i> (1982)	41
	Applying Top-Down Analysis to the Visual System	42
	Summary	47
	Checklists	47
3	The Turn to the Brain	50
	Overview	50
3.1	Cognitive Systems as Functional Systems?	51
3.2	The Anatomy of the Brain and the Primary Visual Pathway	53
	The Two-Visual-Systems Hypothesis: Ungerleider and Mishkin, “Two Cortical Visual Systems” (1982)	54
3.3	Extending Computational Modeling to the Brain	59
	A New Set of Algorithms: Rumelhart et al., <i>Parallel Distributed Processing: Explorations in the Microstructure of Cognition</i> (1986)	59
	Pattern Recognition in Neural Networks: Gorman and Sejnowski, “Analysis of Hidden Units in a Layered Network Trained to Identify Sonar Targets” (1998)	60
3.4	Mapping the Stages of Lexical Processing	61
	Functional Neuroimaging with PET	62
	Petersen et al., “Positron Emission Tomographic Studies of the Cortical Anatomy of Single-Word Processing” (1988)	63
3.5	Studying Memory for Visual Events	65
	Functional Neuroimaging with fMRI	65
	Brewer et al., “Making Memories: Brain Activity That Predicts How Well Visual Experience Will Be Remembered” (1998)	67
3.6	The Neural Correlates of the BOLD Signal	69
	Logothetis, “The Underpinnings of the BOLD Functional Magnetic Resonance Imaging Signal” (2001)	71
	Summary	71
	Checklists	72
	PART II MODELS AND TOOLS	
4	Physical Symbol Systems and the Language of Thought	77
	Overview	77
4.1	The Physical Symbol System Hypothesis	78
	Symbols and Symbol Systems	78
	Transforming Symbol Structures	79
	Intelligent Action and the Physical Symbol System	82
4.2	From Physical Symbol Systems to the Language of Thought	82
	Intentional Realism and Causation by Content	84
	The Language of Thought and the Relation between Syntax and Semantics	86
4.3	The Russian Room Argument and the Turing Test	88
	Responding to the Russian Room Argument	91
	Summary	92
	Checklists	93
5	Neural Networks and Distributed Information Processing	95
	Overview	95
5.1	Neurally Inspired Models of Information Processing	96
	Neurons and Network Units	96

5.2	Single-Layer Networks and Boolean Functions	99
	Learning in Single-Layer Networks: The Perceptron-Convergence Rule	102
	Linear Separability and the Limits of Perceptron Convergence	103
5.3	Training Multilayer Networks	106
	The Backpropagation Algorithm	107
	How Biologically Plausible Are Neural Networks?	108
5.4	Information Processing in Neural Networks: Key Features	109
	Distributed Representations	109
	No Clear Distinction between Information Storage and Information Processing	109
	The Ability to Learn from “Experience”	110
	Summary	111
	Checklists	111
6	Applying Dynamical Systems Theory to Model the Mind	114
	Overview	114
6.1	Cognitive Science and Dynamical Systems	114
	What Are Dynamical Systems?	115
	The Dynamical Systems Hypothesis: Cognitive Science without Representations?	117
6.2	Applying Dynamical Systems: Two Examples from Child Development	121
	Two Ways of Thinking about Motor Control	121
	Dynamical Systems and the A-Not-B Error	123
	Assessing the Dynamical Systems Approach	127
	Summary	128
	Checklists	128
7	Bayesianism in Cognitive Science	130
	Overview	130
7.1	Bayesianism: A Primer	131
	Degrees of Belief and Subjective Probability	131
	Conditional Probability	132
	Bayes’s Rule (the Short Version)	134
7.2	Perception as a Bayesian Problem	136
	The Predictive Challenge of Perception	136
	Case Study: Binocular Rivalry	138
7.3	Neuroeconomics: Bayes in the Brain	141
	What Is Expected Utility?	141
	Case Study: Neurons That Code for Expected Utility	143
	Summary	149
	Checklists	149
8	Modules and Architectures	152
	Overview	152
8.1	Architectures for Artificial Agents	153
	Three Agent Architectures	153
8.2	Fodor on the Modularity of Mind	156
	Modular and Nonmodular Processing	156
8.3	The Massive Modularity Hypothesis	158
	The Cheater-Detection Module	158
	The Evolution of Cooperation	160
	Two Arguments	162
	Evaluating the Arguments for Massive Modularity	164

x	CONTENTS	
8.4	Hybrid Architectures: The Example of ACT-R	164
	The ACT-R Architecture	165
	ACT-R as a Hybrid Architecture	167
	Summary	168
	Checklists	169
9	Strategies for Brain Mapping	171
	Overview	171
9.1	Structure and Function in the Brain	172
	Exploring Anatomical Connectivity	174
9.2	Studying Cognitive Functioning: Techniques from Neuroscience	178
	Mapping the Brain's Electrical Activity: EEG and MEG	178
	Mapping the Brain's Blood Flow and Blood Oxygen Levels: PET and fMRI	180
9.3	Combining Resources I: The Locus-of-Selection Problem	181
	Combining ERPs and Single-Unit Recordings	182
9.4	Combining Resources II: Networks for Attention	185
	Two Hypotheses about Visuospatial Attention	186
9.5	From Data to Maps: Problems and Pitfalls	188
	From Blood Flow to Cognition?	188
	Noise in the System?	189
	Functional Connectivity versus Effective Connectivity	189
	Summary	190
	Checklists	191
	PART III APPLICATIONS	
10	Models of Language Learning	197
	Overview	197
10.1	Language and Rules	198
	Understanding a Language and Learning a Language	198
10.2	Language Learning and the Language of Thought: Fodor's Argument	199
10.3	Language Learning in Neural Networks	201
	The Challenge of Tense Learning	202
	Connectionist Models of Tense Learning	204
10.4	Bayesian Language Learning	207
	Probabilities in Word and Phrase Segmentation	208
	Understanding Pronouns	209
	Learning Linguistic Categories	211
	Summary	213
	Checklists	213
11	Object Perception and Folk Physics	215
	Overview	215
11.1	Object Permanence and Physical Reasoning in Infancy	216
	Infant Cognition and the Dishabituation Paradigm	216
	How Should the Dishabituation Experiments Be Interpreted?	220
11.2	Neural Network Models of Children's Physical Reasoning	221
	Modeling Object Permanence	223
	Modeling the Balance-Beam Problem	224
11.3	Conclusion: The Question of Levels	226
	Summary	229
	Checklists	229

12 Machine Learning: From Expert Systems to Deep Learning	231
Overview	231
12.1 Expert Systems and Machine Learning	232
Expert Systems and Decision Trees	232
ID3: An Algorithm for Machine Learning	234
12.2 Representation Learning and Deep Learning	237
Deep Learning and the Visual Cortex	239
12.3 The Machinery of Deep Learning	242
Autoencoders	242
Convolutional Neural Networks	243
12.4 Deep-Reinforcement Learning	246
Summary	248
Checklists	249
13 Exploring Mindreading	251
Overview	251
13.1 Pretend Play and Metarepresentation	252
Leslie on Pretend Play and Metarepresentation	252
13.2 Metarepresentation, Autism, and Theory of Mind	254
Using the False-Belief Task to Study Mindreading	254
Interpreting the Results	255
Implicit and Explicit Understanding of False Belief	257
13.3 The Mindreading System	258
First Steps in Mindreading	259
From Dyadic to Triadic Interactions: Joint Visual Attention	260
TESS and TOMM	260
13.4 Mindreading as Simulation	261
Standard Simulationism	261
Radical Simulationism	262
13.5 The Cognitive Neuroscience of Mindreading	263
Neuroimaging Evidence for a Dedicated Theory-of-Mind System?	263
Neuroscientific Evidence for Simulation in Low-Level Mindreading?	266
Neuroscientific Evidence for Simulation in High-Level Mindreading?	268
Summary	269
Checklists	270
14 Robotics: From GOFAI to Situated Cognition and Behavior-Based Robotics	273
Overview	273
14.1 GOFAI Robotics: SHAKEY	274
SHAKEY's Software I: Low-Level Activities and Intermediate-Level Actions	275
SHAKEY's Software II: Logic Programming in STRIPS and PLANEX	277
14.2 Situated Cognition and Biorobotics	278
The Challenge of Building a Situated Agent	278
Situated Cognition and Knowledge Representation	280
Biorobotics: Insects and Morphological Computation	281
14.3 From Subsumption Architectures to Behavior-Based Robotics	285
Subsumption Architectures: The Example of Allen	285
Behavior-Based Robotics: TOTO	288
Multiagent Programming: The Nerd Herd	290
Summary	292
Checklists	292

15 The Cognitive Science of Consciousness	295
Overview	295
15.1 Information Processing without Conscious Awareness: Some Basic Data	296
Consciousness and Priming	296
Nonconscious Processing in Blindsight and Unilateral Spatial Neglect	298
15.2 So What Is Consciousness For?	301
What Is Missing in Blindsight and Spatial Neglect	301
Milner and Goodale: Vision for Action and Vision for Perception	301
What Is Missing in Masked Priming	304
15.3 Two Types of Consciousness and the Hard Problem	304
15.4 Theories of Consciousness	306
Higher-Order Theories	306
The Global Workspace Theory	308
The Global Neuronal Workspace Theory	308
15.5 Conclusion	311
Summary	312
Checklists	312
16 The Emotions: From Cognitive Science to Affective Science	
Coauthored with Dong An	316
Overview	316
16.1 Early Theories	317
Physical Symbol Systems and the Emotions	317
Ekman and Basic Emotions	318
16.2 Affective Space and the Affective Scientist's Toolkit	321
Elements of an Emotional Episode	325
Genetic Tools in Affective Science	326
Lesion Studies	327
16.3 Fear: A Multilevel and Multidisciplinary Case Study	328
Fear Conditioning and Fear Responses in Rodents	328
Fear and Amygdala Damage in Humans	330
Neuroimaging of Fear in Humans	333
Summary	338
Checklists	338
17 Looking Ahead: Challenges and Opportunities	341
Overview	341
17.1 Exploring the Connectivity of the Brain: The Human Connectome Project and Beyond	342
17.2 Understanding What the Brain Is Doing When It Appears Not to Be Doing Anything	343
17.3 Neural Prosthetics	343
17.4 Cognitive Science and the Law	344
17.5 Autonomous Vehicles: Combining Deep Learning and Intuitive Knowledge	345
Glossary	347
Bibliography	356
Index	378
