<i>Acknowledgments</i>	page ix	9	Role of Pre-tectonic Heat Flow in Thermal Regimes	328
Introduction	1	10	Role of Stratigraphic and Structural Architecture in Thermal Regimes	334
1 Basic Description of Structural Architecture in Transform Margin Settings	3	11	Role of Syn-tectonic Deposition and Erosion in Thermal Regimes	355
2 Mechanics of Strike-Slip Faulting and Transition to Drift Phases	59	12	Role of Deformation on Thermal Regimes of Transform Margins	402
3 Determination of Continental, Proto-oceanic, and Oceanic Crustal Boundaries	94	13	Role of Fluid Flow on Thermal Regime	417
4 Determination of Timing of Strike-Slip Events and Continental Breakup along Transforms	141	14	Models of Source Rock Distribution, Maturation, and Expulsion	445
5 Role of Lithospheric Composition and Compositional Variations in Evolving Structural Styles	179	15	Models of Reservoir Quality Distribution	513
6 Role of Pre-existing Anisotropy in Evolving Strike-Slip Structural Styles	203	16	Sealing Characteristics	551
7 Role of Syn-tectonic Deposition and Erosion in Evolving Structural Styles	225	17	Models of Hydrocarbon Migration	589
8 Fluid Flow Systems and Magmatism	270	18	Trapping Styles	618
